This document was prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by RMS Associates. It is available from the NASA Scientific and Technical Information Facility, P.O. Box 8757, Baltimore, Maryland 21240, at \$10.00 per copy. Make checks payable to "RMS Associates."

# INTRODUCTION

Tech Briefs are short announcements of new technology derived from the research and development activities of the National Aeronautics and Space Administration. These briefs emphasize information considered likely to be transferrable across industrial, regional, or disciplinary lines and are issued to encourage commercial application.

This *Index to NASA Tech Briefs* contains abstracts and four indexes — subject, personal author, originating Center, and Tech Brief Number — for 1983 Tech Briefs.

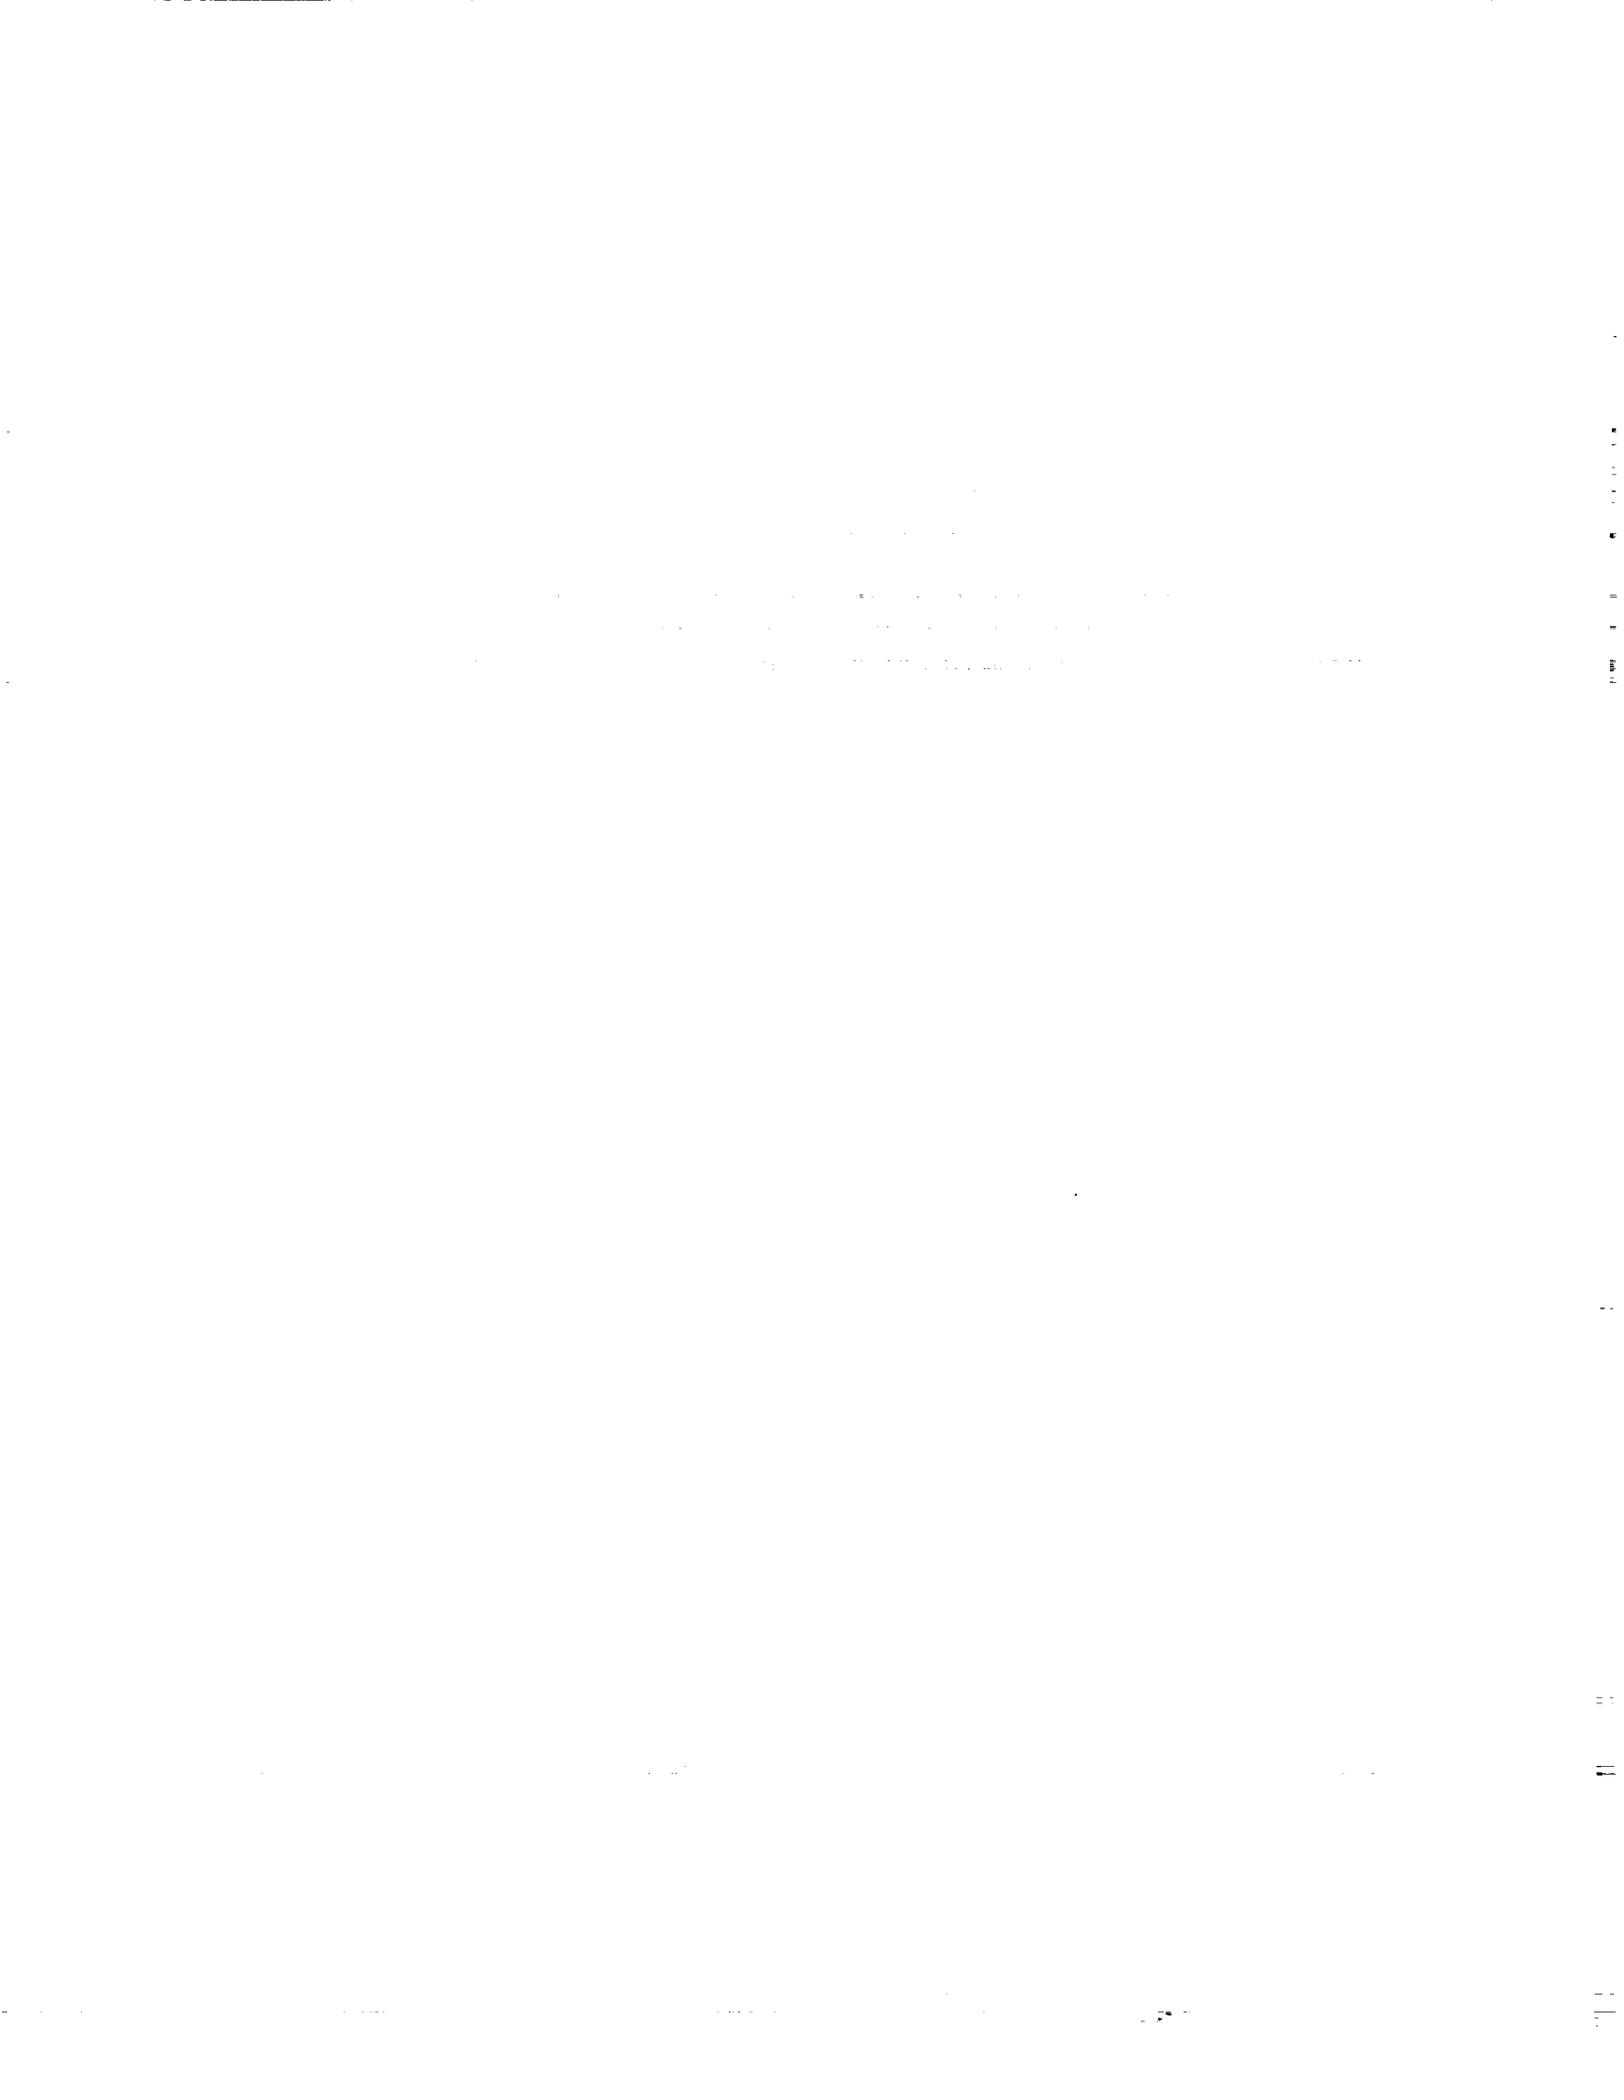

## Availability of NASA Tech Briefs

Distribution of *NASA Tech Briefs*, a bi-monthly free publication, is limited to engineers in U.S. Industry and to other domestic technology transfer agents.

Requests for individual Tech Briefs or for copies of the bi-monthly publication should be addressed to the Manager, Technology Transfer Office, P.O. Box 8757, Baltimore/Washington International Airport, Maryland 21240.

If you are seeking any information on NASA's Technology Utilization Program, its documents and services, please call (301) 859-5300, Ext. 241 or 243.

The January 1982 edition of the *NASA Thesaurus* (NASA SP-7051) is used as the authority for the indexing vocabulary that appears in the subject index. The *NASA Thesaurus* should be consulted in examining the current indexing vocabulary, including associated cross-reference structure. Only the subject terms that have been selected to describe the documents abstracted in this issue appear in the subject index. Copies of the *NASA Thesaurus* may be obtained from the National Technical Information Service at \$35.00 for Volume 1 and \$20.00 for Volume 2.

## Originating Center Prefixes

ARC	Ames Research Center
GSC	Goddard Space Flight Center
HQN	NASA Headquarters
KSC	Kennedy Space Center
LAR	Langley Research Center
LEW	Lewis Research Center
MFS	Marshall Space Flight Center
MSC	Johnson Space Center (formerly Manned Spacecraft Center)
NPO	Jet Propulsion Laboratory/NASA Pasadena Office

### Abstract Section

## 01 ELECTRONIC COMPONENTS AND CIRCUITS

**B83-10001**  
**DIGITAL PHASE-SHIFT STANDARD**  
J. A. CRAMP (Bionetics Corp.)  
May 1983  
**KSC-11250**

**Vol. 7, No. 3, P. 241**

Digital phase-shift standard used in combination with oscillator to calibrate other phase standards and phase-angle voltmeters. Phase-shifter circuit provides two square-wave outputs, A and B, with phase difference between them selectable in 30 degree increments. Circuit is used with input signals as low as 1 volt rms, in almost any waveform.

**B83-10002**  
**PRINTED CIRCUIT CONVERTS RF ENERGY TO DC POWER**  
J. TRINER and W. BROWN (Raytheon Co.)  
Aug. 1983 See Also NASA CR-156866 (N81-274011/NSP)

**LEW-13913** **Vol. 7, No. 3, P. 242**

Ultra-light-weight, large area, antenna/rectifier has 85 percent conversion efficiency. System consists of large number of repetitive circuits called 'rectenna elements.' Each element produces 2 W of power, comprises half-wave dipole, input filter, and Schottky barrier dipole. Two-wire microwave transmission lines act as dc power collecting buses.

**B83-10003**  
**TWO-WIRE TO FOUR-WIRE AUDIO CONVERTER**  
G. L. TALLEY JR. and B. L. SEALE  
Aug. 1983  
**KSC-11256**

**Vol. 7, No. 3, P. 243**

Simple circuit provides interface between normally incompatible voicecommunication lines. Circuit maintains 40 dB of isolation between input and output halves of four-wire line permitting two-wire line to be connected. Balancing potentiometer, Rg, adjusts gain of IC2 to null feed through from input to output. Adjustment is done on workbench just after assembly.

**B83-10004**  
**MEASURING EXCESS NOISE IN SDL'S**  
S. J. KATZBERG, H. R. KOWITZ, C. W. ROWLAND, T. A. SHULL, S. L. RUGGLES (Kentron International, Inc.), and L. F. MATTHEWS  
Aug. 1983  
**LAR-12938**

**Vol. 7, No. 3, P. 244**

New instrument gives quantitative information on 'excess noise' in semiconductor-diode laser (SDL's). By proper

selection of detector, instrument tests any SDL from visible wavelengths through thermal infrared. Lasers determine excess noise in SKL source by measuring photocurrent generated in photodetector exposed first to reference laser then to SKL under test.

**B83-10005**  
**SOLID-STATE DC CIRCUIT BREAKER**  
P. HARVEY (American Science and Engineering, Inc.)  
Aug. 1983  
**MFS-25172**

**Vol. 7, No. 3, P. 245**

Circuit breaker with no moving parts protects direct-current (dc) loads. Current which circuit breaker opens (trip current) is adjustable and so is time delay before breaker trips. Forward voltage drop rises from 0.6 to 1.2 V as current rises to trip point. Breaker has two terminals, like fuse, therefore replaces fuse in dc circuit. Powered by circuit it protects and reset by either turning off power source or disconnecting load.

**B83-10006**  
**IMPROVED CONNECTOR SHELL FOR CABLE SHIELDS**  
A. L. PRISK (CALTECH) and J. W. ROTTA JR. (CALTECH)  
Aug. 1983  
**NPO-15584**

**Vol. 7, No. 3, P. 246**

Cable connector shell improves electrostatic and electromagnetic shielding by electrically connecting cable braid around entire circumference. Connector cable braid is slipped over ferrule and sleeve is slipped over braid, clamping it tightly to shell. Connector shell completely shields cable conductors.

**B83-10007**  
**ADD-ON SHIELDING FOR UNSHIELDED WIRE**  
J. C. KOENIG (CALTECH), J. W. BILLITTI (CALTECH), and J. M. TALLON (CALTECH)  
Aug. 1983  
**NPO-15107**

**Vol. 7, No. 3, p. 247**

Fabrication sequence used to produce compact shields slipped into place from free ends of wires already soldered into connectors at other ends. Single shields are formed into harnesses by connecting grounding jumpers. Technique is especially useful for small diameter wire attached to microminiature connectors.

**B83-10008**  
**X-RAY DETECTOR FOR 1 TO 30 KEV**  
G. ALCORN, J. JACKSON JR., P. GRANT, and F. MARSHALL  
Aug. 1983  
**GSC-12682**

**Vol. 7, No. 3, P. 248**

Array of silicon X-ray detecting diodes measures photon energy and provides image of X-ray pattern. Regardless of thickness of new X-ray detector, depletion region extends through it. Impinging X-rays generate electrons in quantities proportional to X-ray energy. X-ray detector is mated

## 01 ELECTRONIC COMPONENTS AND CIRCUITS

to charge-coupled-device array for image generation and processing. Useful in industrial part inspection, pulsed-plasma research and medical application.

**B83-10009**

### LEVEL SENSOR FOR CRYOGENIC FLUIDS

N. E. SIMMONS (Rockwell International Corp.) and R. A. SCHROFF (Rockwell International Corp.)

Aug. 1983

**MSC-20302**

**Vol. 7, No. 3, p. 249**

Hot wire sensor combined with voltage-comparator circuit monitors liquid level in cryogenic-fluid storage tanks. Sensor circuit adaptable to different liquids and sensors. Constant-current source drives current through sensing probe and fixed resistor. Voltage comparator circuits interpret voltage drops to tell whether probe is immersed in liquid and is current in probe.

**B83-10010**

### DETERMINING SOLAR-CELL OPERATING TEMPERATURE

J. S. GRIFFITH (University of New York at Binghamton), M. S. RATHOD (CALTECH), and J. S. PASLASKI (CALTECH)

Aug. 1983

**NPO-15449**

**Vol. 7, No. 3, P. 250**

Laboratory test measures effect of windspeed and wind direction. Series of tests shows solar-photovoltaic cell temperature extremely sensitive to windspeed, moderately sensitive to wind direction, and rather insensitive to ambient temperature.

**B83-10017**

### FOCAL-PLANE-ARRAY OPTICAL PROXIMITY SENSORS

A. R. JOHNSTON (CALTECH)

Aug. 1983

**NPO-15155**

**Vol. 7, No. 3, P. 259**

Objects detected at beam axis intersections. Group of light sources or detectors is mounted in box at focal plane of lens. Box can therefore illuminate or view several axes, each corresponding to source or detector of group. Proximity sensing system developed to trigger braking system of automatically controlled car.

**B83-10125**

### DIGITAL SINGLE-PHASE POWER-FACTOR CONTROLLER

R. W. DABNEY

Oct. 1983

**MFS-25861**

**Vol. 7, No. 4, P. 369**

Digital circuit has faster response to load changes. Digital power-factor controller senses changing motor-load torques by sampling open-circuit voltage across gate-controlled silicon switch. Circuit responds more rapidly to hanging loads than analog power-factor controllers because no low-pass filter is in feedback loop.

**B83-10126**

### HIDING SOLAR-ARRAY BUS BARS

W. F. HUFNAGEL (Solarex Corp.)

Oct. 1983

**NPO-15755**

**Vol. 7, No. 4, P. 370**

End terminals mounted under cells, maximizing usable illuminated area. Reconfigured solar panel bus bars placed under cells, reducing portion of module area not occupied by active silicon. Underside of last cell in string of cells serves as contact for positive bus. Negative tab of last cell in string is wrapped around from top of cell. Tabs are connected to output boards mounted under cells.

**B83-10127**

### HIGH POWER SWITCHING TRANSISTOR

P. L. HOWER (Westinghouse Electric Corp.), Y. C. KAO (Westinghouse Electric Corp.), and D. C. CARNAHAN (Westinghouse Electric Corp.)

Oct. 1983 See Also NASA CR-165372 (N81-28353/NSP)

and NASA CR-165547 (N82-18506/NSP)

**LEW-13728**

**Vol. 7, No. 4, P. 371**

Improved switching transistors handle 400-A peak currents and up to 1,200 V. Using large diameter silicon wafers with twice effective area as D60T, form basis for D7 family of power switching transistors. Package includes npn wafer, emitter preform, and base-contact insert. Applications are: 25 to 50-kilowatt high-frequency dc/dc inverters, VSCF converters, and motor controllers for electrical vehicles.

**B83-10128**

### MEASURING TENSION IN TRANSISTOR SUSPENSIONS

W. P. HUBBARD (CALTECH)

Oct. 1983

**NPO-15677**

**Vol. 7, No. 4, P. 372**

Vibration analysis is nondestructive and noninvasive. Transistor isolated from heat (or cold) of surroundings by filament suspension. Filaments made of polyester are (0.005 in) 0.127 mm in diameter. Transistor lead wires are wrapped around certain filaments. Applicable for testing filament mounts too delicate for testing by tension probes.

**B83-10129**

### DETECTING SOLAR-CELL FAILURES

T. J. MALONEY (AIA Research Corporation)

Oct. 1983

**NPO-15741**

**Vol. 7, No. 4, P. 373**

Circuit identified malfunctioning photovoltaic array. Cell-failure detection circuit compares output of photovoltaic array to control cell. If any module fails, activates light-emitting diode. Circuit could also sound alarm.

**B83-10130**

### DEVELOPING STANDARDS FOR PHOTOVOLTAIC DEVICES

A. R. HOFFMAN (CALTECH), R. G. ROSS JR. (CALTECH), and S. H. GASNER (CALTECH)

Oct. 1983

**NPO-15734**

**Vol. 7, No. 4, P. 374**

Ground rules outlined for evaluating photovoltaic technology. Document addresses number of performance attributes: electrical, thermal, mechanical, structural, safety, reliability, durability, installation, operation, maintenance, building and site. Each criterion includes user need or expectation for element and describes method of test.

**B83-10131**

### ELECTRONIC-POWER-TURNER DESIGN GUIDE

G. E. SCHWARZE, J. C. LAGADINOS (MagCap Engineering, Inc.), and J. F. AHEARN (MagCap Engineering, Inc.)

Oct. 1983 See Also NASA CR-134992 (N78-29353/NSP)

**LEW-13208**

**Vol. 7, No. 4, P. 374**

Compilation of information on design procedures, electrical properties, and fabrication. Guide provides information on design procedures; magnetic and insulating material electrical properties; impregnating, encapsulating and processing techniques.

**B83-10247**

### BAND-PASS AMPLIFIER WITHOUT DISCRETE REACTANCE ELEMENTS

L. KLEINBERG

Apr. 1984

**GSC-12788**

**Vol. 8, No. 1, P. 03**

Inherent or 'natural' device capacitance exploited. Band-Pass Circuit has input impedance of equivalent circuit at frequencies much greater than operational-amplifier rolloff frequency. Apparent inductance and capacitance arise from combined effects of feedback and reactive component of amplifier gain in frequency range.

**B83-10248**

### PHASE DETECTOR FOR POWER-FACTOR CONTROLLER

F. J. NOLA

Apr. 1984

**MFS-25854****Vol. 8, No. 1, P. 04**

Positive feedback assures reliable switching. Three Phase Power Factor Controller includes three phase detectors, each produces rectangular waves of duration approximately equal to lag time between line voltage and motor current.

**B83-10249****POWER-FACTOR CONTROLLER WITH FAST LOAD RESPONSE**

F. J. NOLA

Apr. 1984

**MFS-25852****Vol. 8, No. 1, P. 05**

Sudden changes in induced emf sensed. In refinement of soft starting three phase power-factor controller, additional components enable circuit to respond quickly to sudden increase in motor load. Rapid-load-response addition senses induced motor emf to detect sudden load increase and generates command signal to increase applied power in response.

**B83-10250****SHIELDED ALUMINUM FLAT-CONDUCTOR CABLE**

S. FARINA (Flexible Circuits, Inc.)

Innovator Not Given (Lockheed Missiles &amp; Space Co., Inc. Apr. 1984)

**MFS-25899****Vol. 8, No. 1, P. 07**

Thin wiring harness stores compactly. Flat aluminum conductors glued between layers of polyimide. Aluminum shield surrounds insulated conductors. Outer layer polyimide. Aluminum shield reduces flexibility of cable and cable withstand only limited number of repetitions of sharp bending at same spot.

**B83-10251****CONICAL ELECTRICAL CONNECTORS ALINE EASILY**

K. H. CLARK

1984

**MFS-25211****Vol. 8, No. 1, P. 08**

Rotational alinement not critical in design useful for remote manipulators. Plug and socket pushed together, plug rings deflect spring segments of corresponding socket ring. Particularly suitable for remote manipulators and making connections in 'blind' locations.

**B83-10252****DIRECTIONAL COUPLER WITH INCREASED DIRECTIVITY**

H. M. PICKETT (CALTECH) and A. E. CHIOU (CALTECH)

Apr. 1984

**NPO-15892****Vol. 8, No. 1, P. 9**

Diffraction loss reduced by curving one reflector. In improved diplexer, adjustable reflector has toroidal curvature to reduce diffraction loss through open cavity ends. Primarily used in local oscillator diplexers, new design increases signal to noise ratios and therefore ranges of millimeter and submillimeter heterodyne receivers.

**B83-10253****USING A PFET TO COMMUTATE AN SCR**

D. B. EDWARDS (CALTECH) and W. E. RIPPLE (CALTECH)

Apr. 1984

**NPO-15282****Vol. 8, No. 1, P. 10**

Accidental turn-on prevented. PFET diverts load current around SCR to prevent false SCR triggering from current and voltage switching transients. New circuit used in all types of single phase and polyphase inverters and in buck-boost-, and flyback regulators.

**B83-10254****DIGITAL SOLDERING-IRON TESTER**

R. N. BUGGLE (Honeywell, Inc.) and W. H. METKA JR. (Honeywell, Inc.)

Apr. 1984

**MFS-25863****Vol. 8, No. 1, P. 12**

Instrument reads tip temperature and contact potential in seconds. Tinned soldering tip touched to temperature sensitive button for 4 seconds and to voltage probe for 1 to 3 seconds. Tip temperature and voltage appear on digital displays. Instrument quickly gives assurance conditions are correct for reliable soldering.

**B83-10255****ERROR-COMPENSATED INTEGRATE AND HOLD**

M. MATLIN

Apr. 1984

**ARC-11303****Vol. 8, No. 1, P. 12**

Differencing circuit cancels error caused by switching transistors capacitance. In integrate and hold circuit using JFET switch, gate-to-source capacitance causes error in output voltage. Differential connection cancels out error. Applications in systems where very low voltages sampled or many integrate-and-hold cycles before circuit is reset.

**B83-10256****PAIRWISE COMPARISON OF VOLTAGE SETS**

C. M. VERBER (Battelle Columbus Laboratories) and R. P. KENAN (Battelle Columbus Laboratories)

Apr. 1984

**LAR-12929****Vol. 8, No. 1, P. 13**

Optical preprocessor compares 16 incoming signals with reference voltages. Integrated optical subtraction to take 'vector difference' of two sets of analog voltages. Applications include satellite onboard processing of pictorial data so data not useful discarded; device recognizes presence of accessible cloud cover and signals halt to data transmission.

**B83-10257****STABILIZING CRYSTAL OSCILLATORS WITH MELTING METALS**

J. B. STEPHENS (Caltech) and C. G. MILLER (Caltech)

Apr. 1984

**NPO-15641; NPO-15642; NPO-15643****Vol. 8, No. 1, P. 14**

Heat of fusion provides extended period of constant temperature and frequency. Crystal surrounded by metal in spherical container. As outside temperature rises to melting point of metal, metal starts to liquefy; but temperature stays at melting point until no solid metal remains. Potential terrestrial applications include low-power environmental telemetering transmitters and instrumentation transmitters for industrial processes.

**B83-10258****SCM HANDBOOKS FOR DC-TO-DC CONVERTERS**

F. LEE (Virginia Polytechnic Institute and State University), M. MOHMOUD (Virginia Polytechnic Institute and State University), and Y. YU (TRW Defense and Space Systems Group)

Apr. 1984 SEE ALSO NASA CR-165172 (N81-10301/NSP) and NASA CR-165173 (N8111314/NSP)

**LEW-13886****Vol. 8, No. 1, P. 15**

Two documents aid in design of control modules for dc-to-dc converters. Features of SCM include: Adaptive stability, power component stress limiting, implementation of various control laws, unified design approach. Analysis and guidelines contained in handbooks enable engineer to design SCM circuit and confidently predict resulting overall performance.

**B83-10259****SOLID-STATE CROSSBAR SWITCH**

T. O. ANDERSON (CALTECH)

Apr. 1984

**NPO-15066****Vol. 8, No. 1, P. 16**

Combines analog and digital circuits for multiline/multiport switching. Bidirectional solid-state crossbar switch provides interfacing and switching for 16 X24 coordinate ports for 16 parallel signal lines. Intended for rapid manual-controlled or computer controlled reconfiguration of distributed computing systems.

## 01 ELECTRONIC COMPONENTS AND CIRCUITS

**B83-10260**

### DETECTING DEFECTIVE SOLDER BONDS

R. PAULSON (Lockheed Missiles & Space Co., Inc.), J. BARNEY (Lockheed Missiles & Space Co., Inc.), and H. J. DECKER

Apr. 1984

**MFS-25507**

**Vol. 8, No. 1, P. 16**

Method is noncontact and nondestructive. Technique detects solder bonds in solar array of other large circuit board, using thermal-imaging camera. Board placed between heat lamp and camera. Poor joints indicated by 'cold' spots on the infrared image.

**B83-12261**

### BLOWING DUST AWAY WITH ELECTROSTATIC WIND

M. G. UTTER (University of Arizona)

Apr. 1984

**HQN-10936**

**Vol. 8, No. 1, P. 16**

Ionized air molecules drive away contaminants. Electrostatic wind prevents dust buildup and subsequent electrical breakdown in powerlines, transformers, switchgears, Van de Graaff generators, electrostatic precipitators, and other high-voltage equipment. Makes periodic cleaning or airblasting unnecessary.

**B83-10262**

### IMPROVED COIL FOR HYDROGEN DISSOCIATORS

R. VESSOT (Smithsonian Institution)

Apr. 1984

**MFS-25638**

**Vol. 8, No. 1, P. 16**

Flat coil has rigid printed circuit substrate. New coil structure minimizes RF electric field near glass walls of plasma vessel; therefore reduces direct electron bombardment of glass. Design lends itself well to high production and standardized dimensions.

**B83-10263**

### THE EFFECT OF COSMIC RAYS ON MSI DEVICES

D. K. NICHOLS (CALTECH), W. E. PRICE (CALTECH), and J. P. WOODS (MIT)

Apr. 1984

**NPO-15779**

**Vol. 8, No. 1, P. 16**

Low-power devices susceptible to cosmic-ray particles. Five MSI device technologies, including TTL, low power TTL, Schottky, CMOS, and low-power Schottky, subjected to 120-MeV krypton-ion beam from cyclotron and monitored for single-event upset. Results find terrestrial application for radiation hardening of electronic devices and systems.

**B83-10264**

### COOLING WAVEGUIDE FLANGES IN MICROWAVE TRANSMITTERS

B. C. CHEN (CALTECH) and R. W. HARTOP

Apr. 1984

**NPO-15401**

**Vol. 8, No. 1, P. 16**

Flange appendage circulates coolant for conductive heat removal. Flange appendage bore accommodates coolant tube. O-ring surrounds bore; when adjacent waveguide sections are bolted together, continuous conduit is formed for coolant. Pressure release groove in modified flange prevents coolant from entering waveguide should O-ring seal fail.

**B83-10265**

### UNCOOLED IR DETECTOR

P. J. SHLICHTA (CALTECH)

Apr. 1984

**NPO-14832**

**Vol. 8, No. 1, P. 17**

Detector combines liquid crystal film with light-sensitive solid-state array. Liquid-crystal film acts as IR detector when maintained just below temperature of transition from opacity to transparency. When IR radiation is absorbed by film, resultant heating changes visiblelight transmission, modulating uniform visible light beam as it passes through film.

**B83-10267**

### IMPROVED TWO-PHASE SWITCHING REGULATOR

W. E. RIPPEL (CALTECH)

Apr. 1984

**NPO-15172**

**Vol. 8, No. 1, P. 17**

Coupled-inductor polyphase regulator has better efficiency and lower inductor losses. Improved two-phase switching regulator employs negative coupling between inductors to achieve better power-to-weight ratio while reducing peak switching currents and inductor losses. Improvement of about 35 percent using new technique.

**B83-10268**

### TI/PD/CU CONTACTS FOR SEMICONDUCTOR DEVICES

R. B. CAMPBELL (Westinghouse Electric Corp.) and A. ROHATGI (Westinghouse Electric Corp.)

Apr. 1984

**NPO-15043**

**Vol. 8, No. 1, P. 17**

Copper systems equivalent in performance to silver or gold systems. Titanium layer and palladium layer deposited on semiconductor device by electron beam evaporation. Desired pattern etched using photoresist. Thin layer of copper plated on contact pattern from cyanide solution. Copper layer then built up to 4 to 8 microns by electroplating from acid solution.

**B83-10269**

### IMPROVED HIGH-CURRENT DRIVE CIRCUIT

S. W. COLE (CALTECH)

Apr. 1984

**NPO-14938**

**Vol. 8, No. 1, P. 17**

Uses VMOS field-effect power transistor. High-current drive circuit employs n-channel enhancement-mode VMOS field-effect power transistor to eliminate problem of oscillation at high power encountered in conventional circuits with bipolar transistors. Drive voltage required is typically 1 to 3 V for load current of 10 A.

**B83-10270**

### PROGRAMABLE POWER CONDITIONER

J. R. LANIER, R. E. KAPUSTKA, and J. R. GRAVES

Apr. 1984

**MFS-25531**

**Vol. 8, No. 1, P. 18**

Accepts range of inputs and produces range of outputs. Versatile power conditioner programmed to handle power from wide range of sources such as solar arrays, fuel cells, and electrochemical batteries. Conditioner consists of two parts. Power stage is switching regulator. Controller stage uses microprocessor to generate analog control signal for power stage.

**B83-10271**

### ANTENNA FOR IMAGING SEA ICE

F. T. BARATH (CALTECH) and R. L. JORDAN (CALTECH)

Apr. 1984

**NPO-15352**

**Vol. 8, No. 1 P. 18**

Antenna for imaging of polar regions has terrestrial applications. Antenna consists of four horizontally-polarized 19.0 by 0.6-m planar waveguide arrays and appropriate feed networks mounted on single aluminum supporting structure. Antenna suitable for high quality imaging of sea ice in polar regions above 60 degrees latitude.

**B83-10497**

### INFRARED-RESPONSIVE MONOLITHIC MOS CIRCUIT

Nov. 1984

**GSC-12782**

**Vol. 8, No. 2, P. 165**

Lead chalcogenide photoresistors integrated with FET amplifiers. Circuit combines voltage divider containing lead chalcogenide photoresistor with FET source follower. Source and drain of FET p-doped regions in underlying n-type silicon wafer. All other structures formed at or deposited above original surface plane of wafer.

**B83-10498**

### LOW-NOISE SUBMILLIMETER-WAVE DIODE

R. J. MATTAUCH (University of Virginia)

Nov. 1984

**NPO-15935** Vol. 8, No. 2, P. 166

Low noise achieved without usual high resistance. Barrier of p-type material placed between metal anode and heavily-doped gallium arsenide. Ntype epitaxial layer eliminated. Barrier prevents quantum tunneling of electrons between semiconductor and metal. Higher breakdown structure provided.

**B83-10499**

**SIMPLIFIED HIGH-POWER INVERTER**

D. B. EDWARDS (CALTECH) and W. E. RIPPEL (CALTECH)

Nov. 1984

**NPO-15961** Vol. 8, No. 2, P. 167

Solid-state inverter simplified by use of single gate-turnoff device (GTO) to commutate multiple silicon controlled rectifiers (SCR's). By eliminating conventional commutation circuitry, GTO reduces cost, size and weight. GTO commutation applicable to inverters of greater than 1-kilowatt capacity. Applications include emergency power, load leveling, drives for traction and stationary polyphase motors, and photovoltaic-power conditioning.

**B83-10500**

**ENERGY-SAVING INVERTER**

W. E. RIPPEL (CALTECH) and D. B. EDWARDS (CALTECH)

Nov. 1984

**NPO-15291** Vol. 8, No. 2, P. 168

Commutation by field-effect transistor allows more efficient operation. High voltage field-effect transistor (FET) controls silicon controlled rectifiers (SCR's). Circuit requires only one capacitor and one inductor in commutation circuit: simpler, more efficient, and more economical than conventional inverters. Adaptable to dc-to-dc converters.

**B83-10501**

**SCHOTTKY-BARRIER PHOTOCELL WITH INTERMEDIATE METAL LAYER**

G. E. ALCORN, C. Z. LEINKRAM, and O. OKUNOLA

Nov. 1984

**GSC-12816** Vol. 8, No. 2, P. 169

Device output and durability increased. Photosensitive GaAs Schottkybarrier device modified by addition of intermediate layer of refractory or alkaline earth metal Photovoltaic cells and photosensors made with new design put out higher short-circuit currents and better able to withstand rigors of handling and connection to other circuit components.

**B83-10502**

**FEEDTHROUGH SEAL FOR HIGH-PRESSURE VESSEL**

R. WILLIAMS, O. MULLINS (Lockheed Engineering and Management Services Co., Inc.), D. SMITH (Lockheed Engineering and Management Services Co., Inc.), and G. TEASLEY (Lockheed Engineering and Management Services Co., Inc.)

Nov. 1984 See Also NASA TM-8251

**MSC-20625** Vol. 8, No. 2, P. 170

Combination of ceramic and plastic withstands many depressurizations. Stack of washers surrounds leadthrough electrode. Under pressure washers expand to fill leadthrough hole in high-pressure vessel. Seal thus formed withstands 20 or more pressurization/depressurization cycles. Seal composed of neoprene, polytetrafluoroethylene, nylon and high-purity, high-density commercial alumina ceramic.

**B83-10503**

**STRIPLINE ANTENNA BEAM-FORMING NETWORK**

P. W. CRAMER (CALTECH)

Nov. 1984

**NPO-15743** Vol. 8, No. 2, P. 171

Stripline antenna beam-forming network includes 87 beam ports and 136 feed-element ports and contained on only two microstrip boards. Both uplink and downlink strips supported on same boards. Originally used for communica-

tions coverage of continental United States for Land Mobile Satellite System, structure of interest to antenna designers in other applications.

**B83-10504**

**FINDING OPEN FAULTS IN CMOS CIRCUITS**

R. CHANDRAMOULI (CALTECH)

Nov. 1984

**NPO-15838** Vol. 8, No. 2, P. 171

Algorithm specifies sequence of input test signals and interpretation of resulting output signals for identifying stuck-open faults in complementary metal-oxide semiconductor (CMOS) integrated logic circuits. Incorporated in software for online production testing of CMOS circuits.

**B83-10505**

**FLIP-FLOP DIGITAL MODULATOR**

R. F. ENO (Rockwell International Corp.)

Nov. 1984

**MSC-20334** Vol. 8, No. 2, P. 172

Clock switched on and off in response to data signal. Flip-flop modulator generates square-wave carrier frequency that is half clock frequency and turns carrier on and off. Final demodulator output logical inverse of data input.

**B83-10506**

**SCREENING PLASTIC-ENCAPSULATED SOLID-STATE DEVICES**

L. BULDHAUPT (The Boeing Aerospace Co.)

Nov. 1984 See Also NASA CR-161946 (N82-16343/NSP) and NASA CR-161947 (N82-16344/NSP)

**MFS-25802** Vol. 8, No. 2, P. 173

Suitability of plastic-encapsulated solid-state electronic devices for use in spacecraft discussed. Conclusion of preliminary study was plasticencapsulated parts sufficiently reliable to be considered for use in lowcost equipment used at moderate temperature and low humidity. Useful to engineers as guides to testing or use of plastic encapsulated semiconductors in severe terrestrial environments.

**B83-10507**

**RADIATION-HARDNESS DATA FOR SEMICONDUCTOR DEVICES**

W. E. PRICE (CALTECH), D. K. NICHOLS (CALTECH), S. F. BROWN (CALTECH), M. K. GAUTHIER (CALTECH), and K. E. MARTIN (CALTECH)

Nov. 1984

**NPO-15787** Vol. 8, No. 2, P. 174

Document presents data on and analysis of radiation hardness of various semiconductor devices. Data specifies total-dose radiation tolerance of devices. Volume 1 of report covers diodes, bipolar transistors, field effect transistors, silicon controlled rectifiers and optical devices. Volume 2 covers integrated circuits. Volume 3 provides detailed analysis of data in volumes 1 and 2.

**B83-10508**

**OPTICAL TESTING OF INTEGRATED CIRCUITS**

J. ERICKSON (Hughes Aircraft Co.)

Nov. 1984

**MFS-25498** Vol. 8, No. 2, P. 174

Optical spot-raster scanner produces weighted photoresponse image (PI) of operating CMOS IC. Digital analysis of PI's, which correlates differences in PI's with electrical behavior of IC, shows promise both as 100-percent screening method for use in IC manufacture and as diagnostic tool in IC development.

**B83-10509**

**DEMODULATOR FOR AM AND SSB-SC SIGNALS**

C. P. HEARN and E. S. BRADSHAW

Nov. 1984

**LAR-12716** Vol. 8, No. 2, P. 174

Compatible linear demodulator (CLD) detects either amplitude modulation (AM) or single-sideband suppressed-carrier (SSB-SC) modulation. Carrier recovery homodyne

## 01 ELECTRONIC COMPONENTS AND CIRCUITS

product detector designed for voice communication but easily scaled to other frequencies.

### **B83-10510** **CONTROLLING AN INVERTER-DRIVEN THREE-PHASE MOTOR**

C. DOLLAND (Airesearch Manufacturing Co.)  
Nov. 1984

**MFS-25215** Vol. 8, No. 2, P. 175  
Control system for three-phase permanent-magnet motor driven by line-commutated inverter uses signals generated by integrating back emf of each phase of motor. High-pass filter network eliminates low-frequency components from control loop while maintaining desired power factor.

### **B83-10511** **SHIELDING ELECTRIC CONNECTORS FROM LIGHTNING** W. B. PIERCE (CALTECH) and W. G. COLLINS (CALTECH) Nov. 1984

**NPO-15688** Vol. 8, No. 2, P. 175  
Metallic shield for plastic-body electric power connectors, with provision for attaching cable shielding, prevents lightning-induced overvoltages from damaging sensitive electronic equipment.

### **B83-10512** **REMOTELY-OPERATED TRAFFIC CONTROL LIGHT**

J. S. REEDY  
Nov. 1984

**ARC-11406** Vol. 8, No. 2, P. 175  
Traffic warning light for school crossing, construction zones, and other hazardous areas activated by remote control. Apparatus consists of small radio transmitter, pole-mounted strobe light with attached power supply and radio receiver.

### **B83-10513** **SERVO LEAD COMPENSATION** E. BUCHANAN (Rockwell International Corp.) Nov. 1984

**MFS-19614** Vol. 8, No. 2, P. 175  
Circuit for continuously varying lead compensation in servosystem operative even when integrating amplifier goes into saturation.

### **B83-10514** **DIGITAL CONTROL OF ANALOG DETECTOR** J. BROWN (Rockwell International Corp.) Nov. 1984

**MFS-19608** Vol. 8, No. 2, P. 175  
Reference level required to set switching point of analog comparator at desired level determined and set by computer controlled circuit.

### **B83-10515** **MINIATURE TEMPERATURE-CONTROL CIRCUIT**

R. H. COUCH  
Nov. 1984

**LAR-12900** Vol. 8, No. 2, P. 175  
Operates on any power supply voltage from 6 to 28 volts. Miniature thermostate circuit controls electric heating element to maintain constant temperature in oven or other thermal environment.

### **B83-10516** **POWER-MEASUREMENT ERRORS DUE TO INSTRUMENT LAG**

D. P. ATHANS (CALTECH)  
Nov. 1984

**NPO-15029** Vol. 8, No. 2, P. 176  
Short-risetime pulses contain frequency components above flat-response region of typical instrumentation amplifiers.

### **B83-10517** **MULTIPLE-BAND-GAP SOLAR-CELL CONCEPT** A. A. NUSSBERGER (Rockwell International Corp.) Nov. 1984

**MFS-25724** Vol. 8, No. 2, P. 176  
Multiple band gap photovoltaic structures convert greater portion of insolation to electricity than present solar cells.

### **B83-10518** **CONTINUITY/ISOLATION CHECKER** J. O. LONBORG Nov. 1984

**NPO-15632** Vol. 8, No. 2, P. 176  
Buzzer indicates very high or very low resistance between probes. Instrument checks for either continuity or isolation between two points in electrical circuit.

### **B83-10519** **HIGH-COMMON-MODE-REJECTION DIFFERENTIAL AMPLIFIER**

F. E. LUKENS  
Nov. 1984

**MFS-25868** Vol. 8, No. 2, P. 176  
High-common-mode-rejection differential amplifier amplifies low-level signals in presence of high frequency noise. Amplifier used in power system requiring current monitoring on high side of high-voltage powerline.

### **B83-10520** **PAINT-THICKNESS CHECKER** C. NELSON (Beech Aircraft Corp.) Nov. 1984

**KSC-11270** Vol. 8, No. 2, P. 176  
Eddy-current flaw detector with cathode-ray tube (CRT) used to compare layer thickness of conductive paint on metallic substrates.

## 02 ELECTRONIC SYSTEMS

### **B83-10011** **FAST ELECTRONIC SOLAR CELL TESTER** J. W. LATHROP (Clemson University) and C. R. SAYLOR (Clemson University) Aug. 1983

**NPO-15676** Vol. 7, No. 3, P. 253  
Microcomputer controlled system gather current and voltage data. System consists of light source, microcomputer, programmable dc power supply, analog/digital interface, and data storage display equipment. Applies series of test loads to cell via programmable dc power supply to obtain I/V characteristic curve and key cell-performance parameter. Apparatus and programming technique are applicable to devices such as batteries and sensors.

### **B83-10012** **EFFICIENT DISTRIBUTION OF FREQUENCY-STANDARD SIGNALS**

R. F. MEYER (CALTECH), R. L. SYDNOR (CALTECH), and J. W. MACCONNELL (CALTECH)  
Aug. 1983

**NPO-15392** Vol. 7, No. 3, P. 255  
Low power system distributes precise frequency standard signal to network of remote stations. Reference frequency at phase angle modulates transmitter at master transmitter/receiver circuit and recovers at remote circuit. Two circuits continuously transmit on microwave or optical signals 100 MHz apart to effect synchronization of reference frequency and phase.

**B83-10013****CODING FOR SINGLE-LINE TRANSMISSION**

L. G. MADISON (Martin Marietta Corp.)

Aug. 1983

**KSC-11220****Vol. 7, No. 3, P. 256**

Digital transmission code combines data and clock signals into single waveform. MADCODE needs four standard integrated circuits in generator and converter plus five small discrete components. MADCODE allows simple coding and decoding for transmission of digital signals over single line.

**B83-10014****ROUNDING TECHNIQUE FOR HIGH-SPEED DIGITAL SIGNAL PROCESSING**

E. R. WECHSLER (CALTECH)

Aug. 1983

**NPO-15307****Vol. 7, No. 3, P. 257**

Arithmetic technique facilitates high-speed rounding of 2's complement binary data. Conventional rounding of 2's complement numbers presents problems in high-speed digital circuits. Proposed technique consists of truncating  $K + 1$  bits then attaching bit in least significant position. Mean output error is zero, eliminating introducing voltage offset at input.

**B83-10015****RECEIVER FOR ANTENNA ARRAYS**

M. H. BROCKMAN (CALTECH) and M. F. EASTERLING (CALTECH)

Aug. 1983

**NPO-15089****Vol. 7, No. 3, P. 257**

Diversity reception system combines narrow-band signals from several antennas to yield amplified demodulated signal. System was developed for spacecraft command signals, which typically have bandwidths of few hundred hertz.

**B83-10016****SEARCHING FOR CLEAR-AIR TURBULENCE**

B. L. GARY (CALTECH)

Aug. 1983

**NPO-15351****Vol. 7, No. 3, P. 258**

System for determining potential location and severity of clear-air turbulence based on passive microwave sensor. Horn antenna for prototype clear-air-turbulence warning system rotatable through plus or minus 45 degrees. Permits safer more comfortable flights for commercial airplanes and enables safer inflight refueling for military airplanes.

**B83-10018****IMPROVING CONTROL OF REMOTE MANIPULATORS**

A. K. BEJCZY (CALTECH)

Aug. 1983

**NPO-15049****Vol. 7, No. 3, P. 260**

Advanced theoretical and experimental developments in field of remote manipulators discussed in conference preprint. Report synthesizes number of sensing and control techniques.

**B83-10132****MICROCOMPUTER MULTIPLEXES ALPHANUMERIC LABELS ON CRT'S**

T. COOPER (Narco Scientific)

Oct. 1983

**MSC-20079****Vol. 7, No. 4, P. 377**

External, low-power alphanumeric label generator eliminates costly video circuitry. Microprocessor-based system for multiplexing alphanumeric and analog data stores both program and data. Uses inexpensive circuits, consumes minimal current, is programmable by user, adapts to many CRT monitors. System generates 5-by-7 dot-matrix characters. System speed is adequate for medical monitoring purposes.

**B83-10133****NRZ DATA ASYMMETRY CORRECTOR AND CONVOLUTIONAL ENCODER**

H. J. PFIFFNER (Hughes Aircraft Co.)

Oct. 1983

**MSC-20187****Vol. 7, No. 4, P. 379**

Circuit compensates for timing, amplitude and symmetry perturbations. Data asymmetry corrector and convolutional encoder regenerate data and clock signals in spite of signal variations such as data or clock asymmetry, phase errors, and amplitude variations, then encode data for transmission.

**B83-10134****LINKING 'SMART' MODULES BY A SINGLE CHANNEL**

W. H. KOHL (CALTECH)

Oct. 1983

**NPO-15342****Vol. 7, No. 4, P. 379**

System architecture brings order to potentially chaotic situation. New configuration allows many 'smart' modules (each containing memory and microprocessor) to be linked by common data channel. Architecture allows each module to carry on operations at own data rate within block of time, while communications between modules occur in strict synchronism.

**B83-10135****RADAR FOR MAPPING SEA ICE**

F. T. BARATH (Caltech) and R. L. JORDAN (Caltech)

Oct. 1983

**NPO-15350****Vol. 7, No. 4, P. 381**

X-band system has 100-m2 resolution. Wide swath imaging radar of synthetic aperture type transmits signal to ground station for subsequent processing into imagery. Concept meets functional requirements for continuously mapping sea ice in north and south polar regions.

**B83-10136****VLSI UNIT FOR TWO-DIMENSIONAL CONVOLUTIONS**

K. Y. LIU (Caltech)

Oct. 1983

**NPO-15224****Vol. 7, No. 4, P. 382**

Universal logic structure allows same VLSI chip to be used for variety of computational functions required for two dimensional convolutions. Fast polynomial transform technique is extended into tree computational structure composed of two units: fast polynomial transform (FPT) unit and Chinese remainder theorem (CRT) computational unit.

**B83-10137****CIRCUITRY FOR ANGLE MEASUREMENTS**

J. R. CURRIE and R. R. KISSEL

Oct. 1983

**MFS-25825****Vol. 7, No. 4, P. 383**

Angle resolver pulsed and read under microprocessor control. Pulse generator excites resolver windings with dual slope pulse. System sequentially reads sine and cosine windings. Microprocessor determines angle through which resolver shaft turned from reference angle. Suitable applications include rate tables, antenna direction controllers, and machine tools.

**B83-10138****MEASURING POWER FLOW IN ELECTRIC VEHICLES**

J. GRIFFIN, DANIELC. (CALTECH) and G. A. WIKER (CALTECH)

Oct. 1983

**NPO-15514****Vol. 7, No. 4, P. 384**

Instrument accommodates fast rise and fall times of waveforms characteristic of modern, efficient power controllers. Power meter multiplies analog signals proportional to voltage and current, and converts resulting signal to frequency. Two mechanical counters provided: one for charging, one for discharging.

## 02 ELECTRONIC SYSTEMS

**B83-10139**

**PORTABLE DATA LOGGER FOR PHOTOVOLTAIC PANELS**

S. W. COLE (CALTECH)

Oct. 1983

**NPO-15158**

**Vol. 7, No. 4, P. 385**

Instrument measures rapidly changing knee of V-I curve with extra care. Portable data logger runs on own batteries. Includes microcomputer, which controls voltage-, current-measurement increment, and solid state memory, which stores data until transferred to EPROM module. Data logger is light, compact and easily carried to remote field locations.

**B83-10272**

**LIGHTNING-TRANSIENT RECORDER**

R. L. GRUMM (CALTECH)

Apr. 1984

**NPO-15895**

**Vol. 8, No. 1, P. 21**

Battery-powered system operates for more than one year. Recorder digitizes and records up to 146 current samples at selected intervals during lightning stroke. System continues to store time tags of lightning strokes even if transient current memory is full.

**B83-10273**

**VIRTUAL-CENTER ANTENNA-ARRAYING SYSTEM**

L. J. DEUTSCH (CALTECH), J. W. LAYLAND (CALTECH),

R. G. LIPES (CALTECH), and R. L. MILLER (CALTECH)

Apr. 1984

**NPO-15874**

**Vol. 8, No. 1, P. 22**

Separate signals averaged to produce reference frequency and phase. System develops reference carrier from separate received signals. Phase of signal at each receiver determined by comparison with reference phase. Useful in applications requiring accurate phase estimates: reception of weak telemetry signals, transmitter or reflector locating, nondestructive testing of structures, or geophysical exploration.

**B83-10274**

**PHASED-ANTENNA-ARRAY CONICAL SCANNING**

J. R. LESH (CALTECH)

Apr. 1984

**NPO-15899**

**Vol. 8, No. 1, P. 23**

Antenna pointing faster than mechanical scanning. Three antenna phased array connected to receiving signal-processing system through two phase-shifting networks. Two networks simultaneously steer phased array in two slightly-different beam directions; one for scanning, one for tracking. Technique has many uses in military and civilian radar, principally in tracking aircraft, balloonborne weather instruments, and other moving signal sources or reflectors.

**B83-10275**

**BINARY CORRELATOR FOR ELECTROMAGNETIC SIGNAL PATTERNS**

J. B. GARRISON (Johns Hopkins University) and R. E.

JENKINS (Johns Hopkins University)

Apr. 1984

**GSC-12714**

**Vol. 8, No. 1, P. 24**

Modulation patterns recognized with extensive calculations. Set of shift registers contains patterns of 1's and 0's representing presence or absence of received signal in designated time/frequency bins. Pattern in shift registers correlated with pattern of expected signal by shifting each cell to right according to expected pattern and summing shift-register outputs in analog summing network. Useful in applications requiring identification of smaller pattern of 1-bit data within larger matrix of such data.

**B83-10276**

**RADAR CUTS SUBSOIL SURVEY COSTS**

R. JOHNSON (U.S. Department of Agriculture) and R.

GLACCUM (Technos, Inc.)

Apr. 1984

**KSC-11227**

**Vol. 8, No. 1, P. 25**

Soil features located with minimum time and labor. Ground-penetrating radar (GPR) system supplements manual and mechanical methods in performing subsurface soil survey. Mobile system obtains graphic profile of soil discontinuities and interfaces as function of depth. One or two test borings necessary to substantiate soil profile. GPR proves useful as reconnaissance tool.

**B83-10277**

**'FUEL GAGE' FOR ELECTRIC VEHICLES**

J. J. ROWLETTE (CALTECH)

Apr. 1984

**NPO-15759**

**Vol. 8, No. 1, P. 26**

Gas-emission and time-integrated-current measurements indicate battery charge state. Tests indicate possibility of monitoring state of charge of lead/acid batteries at any stage in charging cycle by measuring charging current and either gas evolution or electrode potential. Data then processed by microcomputer. Uses include cell voltage, cell pressure, cell temperature and rate of gas recombination on catalyst.

**B83-10278**

**MEASURING SOFTWARE-EXECUTION TIME**

C. PINERA (International Business Machines Corp.)

Apr. 1984

**KSC-11267**

**Vol. 8, No. 1, P. 27**

Test circuit times routines even during multiprogram operation. Circuit generates pulse started by signal at beginning address of program under test and ended by signal at ending address. Pulse duration measured with logic analyzer to determine execution time.

**B83-10279**

**TELEMETRY SPEEDS FOREST-FIRE CONTROL**

J. C. ARVESEN and J. W. CHERBONNEAUX

Apr. 1984

**ARC-11438**

**Vol. 8, No. 1, P. 28**

Airborne system rapidly delivers hard copy to firefighters. Sensors in airplane send data to ground station for image processing. Imagery immediately transferred to U.S. Geologic Survey (USGS) maps by photo interpreter. Maps transmitted by telecopies directly to fire-control camps. Receipt by fire camp less than 10 minutes. Information aids in decisions involving deployment of firefighters and equipment, flood control, monitoring oilspills, observing thermal currents, and pollutions monitoring.

**B83-10280**

**DUAL-RATE TRANSMISSION REDUCES WEATHER EFFECTS**

E. C. POSNER (CALTECH)

Apr. 1984

**NPO-15807**

**Vol. 8, No. 1, P. 29**

Scheme ensures maximum data received on average. Dual-rate scheme for maximizing data returned during spacecraft mission, adaptable, as is or with modifications, to high-frequency terrestrial data transmission. Data rate fixed in advance at minimum value guarantees reasonable prospect of success during bad weather. Dualrate strategy yields net data rate 2.5 times best achievable with single transmission rate.

**B83-10281**

**CHARGE EFFICIENCY TESTS OF LEAD/ACID BATTERIES**

J. J. ROWLETTE (CALTECH)

Apr. 1984

**NPO-15869**

**Vol. 8, No. 1, P. 29**

Current, voltage, and gas evolution measured during charge/discharge cycles. Series of standardized tests for evaluating charging efficiency of lead/acid storage batteries described in report. Purpose of tests to provide information for design of battery charger that allows maximum recharge efficiency for electric-vehicle batteries

consistent with other operating parameters, such as range, water loss, and cycle life.

**B83-10282**  
**EXTENDING THE MEMORY OF MICROCOMPUTERS**

G. A. WIKER (CALTECH)

Apr. 1984

**NPO-15295**

**Vol. 8, No. 1, P. 30**

Memory increased while retaining real-time capabilities. Extra memory capacity added to microprocessor without increasing memory address length and special transfer instructions by dedicating block of space in main memory to hold addresses of locations in extra memory.

**B83-10283**  
**RADIO-FREQUENCY AND WIDEBAND MODULATION ARRAYING**

M. H. BROCKMAN (CALTECH)

Apr. 1984

**NPO-15030**

**Vol. 8, No. 1, P. 30**

Summing network receives coherent signals from all receivers in array. Method sums narrow-band radio-frequency (RF) carrier powers and wide-band spectrum powers of array of separate antenna/receiver systems designed for phase-locked-loop or suppressed-carrier operation.

**B83-10284**  
**IMPROVED COAL-THICKNESS MEASUREMENT**

T. A. BARR

Apr. 1984

**MFS-23721**

**Vol. 8, No. 1, P. 30**

Summed signals and dielectric-filled antenna improve measurement. Improved FM radar for measuring thickness of coal seam eliminates spectrum splitting and reduces magnitude of echo from front coal surface.

**B83-10285**  
**PULSE RESPONSE YIELDS BATTERY CHARGE STATE**

C. P. CHAPMAN (CALTECH) and T. A. BARBER (CALTECH)

Apr. 1984

**NPO-14882**

**Vol. 8, No. 1, P. 31**

Response to input pulse characterizes state of charge of battery. Instrument electronically measures input and response of forcing-function pulse that periodically modulates charge or discharge current.

**B83-10286**  
**AUTOMATIC CONTROL OF MULTIMEDIA SHOWS**

L. D. HOLLEY and J. P. STRODE

Apr. 1984

**KSC-11080**

**Vol. 8, No. 1, P. 31**

Audiovisual program synchronized digitally. Controller synchronizes over 60 events to two 16-millimeter movies regardless of speed variations in movie projectors.

**B83-10287**  
**DIGITAL SAR PROCESSOR**

C. WU (CALTECH) and K. Y. LIU (CALTECH)

Apr. 1984

**NPO-15519**

**Vol. 8, No. 1, P. 31**

Produces real-time, single-look, high-resolution imagery. Digital synthetic-aperture-radar (SAR) processor achieves rate of 4 million samples per second. System combines frequency-domain and time-domain processing for two-dimensional azimuth correlation.

**B83-10288**  
**ELECTRIC-POWER SYSTEM SIMULATOR**

R. W. CALDWELL (CALTECH), R. L. GRUMM (CALTECH), and B. L. BIEDEBACH (CALTECH)

Apr. 1984

**NPO-15515**

**Vol. 8, No. 1, P. 31**

Shows different combinations of generation, storage, and load components: display, video monitor with keyboard input to microprocessor, and video monitor for display of

load curves and power generation. Planning tool for electric utilities, regulatory agencies, and laymen in understanding basics of electric-power systems operation.

**B83-10289**  
**CONNECTING SEPARATE COMPUTERS TO A COMMON BUS**

A. K. AGRAWAN (CALTECH), P. G. MULLEN (CALTECH), and V. V. VADAKAN (CALTECH)

Apr. 1984

**NPO-15433**

**Vol. 8, No. 1, P. 31**

Network bus adapter (NBA) handles protocols for computer-to-computer communications. NBA does all protocol handling and communications with bus for its host computer, that processor of different speeds sends data to each other continuously at maximum speed. Any host can communicate with any other, or several or with all.

**B83-10290**  
**FREQUENCY-DIVERSITY RECEPTION FOR PHASE MODULATION**

M. H. BROCKMAN (CALTECH)

Apr. 1984

**NPO-15040**

**Vol. 8, No. 1, P. 32**

Signal-to-noise ratio improved. System receives phase modulation transmitted simultaneously on different carrier frequencies. Used for carriers received through different antennas or through same antenna.

**B83-10291**  
**ELIMINATING DOPPLER EFFECTS IN SYNTHETIC-APERTURE RADAR OPTICAL PROCESSORS**

N. J. CONSTANTINDES (CALTECH) and T. J. BICKNELL (CALTECH)

Apr. 1984

**NPO-14998**

**Vol. 8, No. 1, P. 32**

Pair of photodetectors generates correction signals. Instrument detects Doppler shifts in radar and corrects processing parameters so ambiguities caused by shifts not manifested as double or overlapping images.

**B83-10292**  
**ELECTRONICALLY-SCANNED FOURIER-TURNFORM SPECTROMETER**

J. B. BRECKINRIDGE (CALTECH) and F. G. OCALLAGHAN (CALTECH)

Apr. 1984

**NPO-15844**

**Vol. 8, No. 1, P. 32**

Instrument efficient, lightweight, and stable. Fourier-transform spectrometer configuration uses electronic, instead of mechanical, scanning. Configuration insensitive to vibration-induced sampling errors introduced into mechanically scanned systems.

**B83-10521**  
**SELF-CHECKING MEMORY INTERFACE**

M. W. SIEVERS (CALTECH) and D. A. RENNELS (CALTECH)

Nov. 1984

**NPO-15889**

**Vol. 8, No. 2, P. 179**

Memory-interface integrated circuit not only detects errors in data from other circuits but also detects errors within itself. Memory-interface chip encodes 16-bit words with Hamming code for single-error correction or double-error detection. Chip used in fault-tolerant computers under development by NASA.

**B83-10522**  
**SIDEBAND-AIDED RECEIVER ARRAYS**

S. A. BUTMAN (CALTECH), L. J. DEUTSCH (CALTECH), and R. A. WINKELSTEIN (CALTECH)

Nov. 1984

**NPO-15873**

**Vol. 8, No. 2, P. 180**

Sideband-aided receiver arrays (SARA's) offer way of extracting greater energy per bit in radio data signals. 'Slave' receivers obtain modulation information from 'master'

## 02 ELECTRONIC SYSTEMS

receiver. Developed for reception of telemetry from vehicles in deep space, SARA concept applicable to commercial data-signal reception whenever two or more antennas are combined.

### **B83-10523** **DETECTING DEFORMATIONS IN PHASED-ARRAY ANTENNAS**

F. K. LI (CALTECH) and D. N. HELD (CALTECH)

Nov. 1984

**NPO-15390**

**Vol. 8, No. 2, P. 181**

Doppler technique detects deformation of large phased array radar antenna. Antenna electrically split into subarrays; individual phases measured when examination of antenna stability and provides information for correcting deformation.

### **B83-10524** **AUTOMATIC PHASING FOR ACTIVE ANTENNA ELEMENTS**

C. WU (CALTECH)

Nov. 1984

**NPO-15920**

**Vol. 8, No. 2, P. 182**

Automatic phasing system periodically interrupts antenna operation for calibration intervals and measures phase and amplitude response at each active antenna element. Using these measurements, system adjusts phase shift and possibly gain of active elements during operating intervals to give desired antenna-gain pattern.

### **B83-10525** **INTERSTITIAL DIGITAL-IMAGE-POINT GENERATOR**

T. R. EDWARDS

Nov. 1984

**MFS-25871**

**Vol. 8, No. 2, P. 183**

Resolution of digital imagery increased by calculating estimated values of intensity at coordinate points between original intensity-data points. Calculator implements algorithm that generates such interstitial points using four-by-four array of convolute integer coefficients. Coefficients multiplied by intensities at 16 original image points nearest each interstice to obtain weighted average intensity at each interstice.

### **B83-10526** **UNMANNED INSTRUMENT PLATFORM FOR UNDERSEA EXPLORATION**

G. PAINE (CALTECH), G. R. HANSEN (CALTECH), R. W. GULIZIA (CALTECH), and P. PALUZZI (CALTECH)

Nov. 1984

**NPO-15878**

**Vol. 8, No. 2, P. 184**

Instruments accommodated on moving underwater platform. Towable underwater platform 3.2 meters long, 1.2 meters wide, 1.4 meters high and has mass of about 1,250 kilogram. Platform remotely operated and unmanned. Serves as test bed for development of ocean-measuring instruments and sonars at depths to 20,000 feet.

### **B83-10527** **ELIMINATING 'HOTSPOTS' IN DIGITAL IMAGE PROCESSING**

P. M. SALOMON (CALTECH)

Nov. 1984

**NPO-15684**

**Vol. 8, No. 2, P. 185**

Signals from defective picture elements rejected. Image processing program for use with charge-coupled device (CCD) or other mosaic imager augmented with algorithm that compensates for common type of electronic defect. Algorithm prevents false interpretation of 'hotspots'. Used for robotics, image enhancement, image analysis and digital television.

### **B83-10528** **DETECTION OF FLOATING INPUTS IN LOGIC CIRCUITS**

B. CASH (Martin Marietta Corp.) and M. G. THORNTON (Martin Marietta Corp.)

Nov. 1984

**LAR-13073**

**Vol. 8, No. 2, P. 185**

Simple modification of oscilloscope probe allows easy detection of floating inputs or tristate outputs in digital-IC's. Oscilloscope probe easily modified with 1/4 W resistor and switch for detecting floating inputs in CMOS logic circuits.

**B83-10529**

**DISPLAYING FORCE AND TORQUE OF A MANIPULATOR**  
A. K. BEJCZY (CALTECH), R. S. DOTSON (CALTECH), and H. C. PRIMUS (CALTECH)

Nov. 1984

**NPO-15942**

**Vol. 8, No. 2, P. 186**

Display combines bar charts, vector diagrams, and numerical values to inform operator of forces and torques exerted by end effector of manipulator. On voice or keyboard command, eight-channel strip-chart recorder traces force and torque components and claw position of raw measurements from eight strain gage sensors in end effector. Especially helpful when operator's view of end effector is obscured.

**B83-10530**

**DITIGAL-IMAGE ENHANCEMENT**

R. WOODS (University of Tennessee) and R. GONZALEZ (University of Tennessee)

Nov. 1984

**MFS-25679**

**Vol. 8, No. 2, P. 187**

Programmable system enhances digitally monocular and stereographic images at video rates. Provides automatic and interactive enhancement modes based on histogram modification and intensity-mapping techniques.

**B83-10531**

**INSTRUMENTATION AND CONTROL FOR FOSSIL-ENERGY PROCESSES**

A. MARK JR. (CALTECH)

Nov. 1984

**NPO-15581**

**Vol. 8, No. 2, P. 187**

Instrumentation and control requirements for fossil-energy processes discussed in working document. Published to foster advancement of instrumentation and control technology by making equipment suppliers and others aware of specifications, needs, and potential markets.

**B83-10532**

**STATUS PANEL FOR VIDEO CASSETTE RECORDERS**

G. L. TALLEY JR. (Information Systems Directorate) and D. R. HERBISON (Information Systems Directorate)

Nov. 1984

**KSC-11254**

**Vol. 8, No. 2, P. 187**

Central array of light-emitting diodes displays status of 30 video cassette recorders (VCR's) monitoring integrated testing of Space Shuttle. Remote status panel linked to VCR's by one 37-conductor cable. Transistor/transistor logic chips in interface circuit allow LED array to function without drawing power from VCR control circuits.

**B83-10533**

**CENTRAL CONTROL OF LOCAL OSCILLATOR FREQUENCIES**

S. F. SMITH (University of Tennessee)

Nov. 1984

**GSC-12804**

**Vol. 8, No. 2, P. 187**

Central unit automatically controls frequencies of group of independent crystal-controlled low-power oscillators. Unit checks its own frequency against accurate frequency reference, such as station WWV and corrects its own timing circuit as necessary.

**B83-10534**

**DEALLOCATING DEFECTIVE SPACE ON WINCHESTER DISKS**

W. KING JR. (IBM Corp.)

Nov. 1984

**KSC-11287**

**Vol. 8, No. 2, P. 188**

Method given for locating and deallocating defective

sectors or tracks in Winchester-disk system partitioned into two regions, one for each of two operating systems (OS). First is real-time (on-line) OS, second is diagnostic (off-line) OS.

**B83-10535**  
**DISPLAY FOR MINING-MACHINE OPERATORS**

P. PAULSON (Adjunct Technologies, Inc.)

Nov. 1984

**MFS-25955** Vol. 8, No. 2, P. 188

Electronic display unit provides operator of longwall shearer with information needed to control machine. Unit samples sensors on shearer. Using sensor signals, executes mathematical calculations, performs decisionmaking routines and displays results to operator. Unit also logs data for later analysis.

**B83-10536**  
**DETERMINING THE NONLINEARITY OF MICROWAVE RECEIVERS**

C. T. STELZRIED (CALTECH) and J. E. OHLSON (CALTECH)

Nov. 1984

**NPO-15355** Vol. 8, No. 2, P. 188

Nonlinearity of microwave receiver measured and automatically corrected for by noise-adding radiometer built into microwave receiving circuit. Radiometer includes noise-adding diode, turned on and off by computer controlled processor.

**B83-10537**  
**ESTIMATING EFFECTS OF FLICKER NOISE IN CLOCK SIGNALS**

S. C. WU (CALTECH)

Nov. 1984

**NPO-15525** Vol. 8, No. 2, P. 188

Two techniques mathematically estimate effects of flicker noise in pulse trains used as clock signals.

**B83-10538**  
**HARDWARE FAULT SIMULATOR GENERATES TEST VECTORS FOR COMPLEX IC'S**

C. C. TIMOC (CALTECH), L. M. HESS (CALTECH), and F. R. STOTT (CALTECH)

Nov. 1984

**NPO-15362** Vol. 8, No. 2, P. 188

Report describes technique using fault simulator implemented entirely in hardware to generate and optimize test vectors for microprocessor. Hardware fault simulator approach reduces test time, while maintaining high reliability in detecting faults.

## 03 PHYSICAL SCIENCES

**B83-10019**  
**FABRICATING GRATING COUPLERS ON OPTICAL FIBERS**

C. R. CHUBB (McDonnell Douglas Corp.), J. K. POWERS (McDonnell Douglas Corp.), and D. A. BRYAN (McDonnell Douglas Corp.)

Aug. 1983

**MSC-20286** Vol. 7, No. 3, P. 263

Microscopic corrugations form on fiber surfaces. Grating couplers couple signals into and out of single-mode optical waveguides without requiring precise alignment of components, although in-service efficiency has yet to be verified.

**B83-10020**  
**IMPROVED CATTLE HAULER**

E. J. SALTZMAN

Aug. 1983

**FRC-11058**

Vol. 7, No. 3, P. 265

Better aerodynamics and ventilation increases fuel efficiency and decreases shipping losses. Trailer is ventilated and cooled by inlet ports in front of rig and outlet ports in middle and rear. Rounded cab and fairing reduce drag by creating an attached airflow.

**B83-10021**  
**CHARGED PARTICLE FLUX SENSOR**

D. A. GREGORY and C. D. STOCKS

Aug. 1983

**MFS-25461**

Vol. 7, No. 3, P. 265

Improved version of Faraday cup increases accuracy of measurements of flux density of charged particles incident along axis through collection aperture. Geometry of cone-and-sensing cup combination assures most particles are trapped.

**B83-10022**  
**LENSELESS SCANNING TELESCOPE**

H. B. EDWARDS

Aug. 1983

**LAH-12648**

Vol. 7, No. 3, P. 266

Dual-aperture device minimizes aliasing. Radiometer scans at right angles to line of flight, giving complete coverage from horizon to horizon. Configurations include use of detector as inner aperture or use of concentrating lens in or behind inner aperture to image outer aperture on smaller detector.

**B83-10023**  
**PRECISE MEASUREMENT OF EFFECTIVE FOCAL LENGTH**

T. D. WISE (Hughes Aircraft Co.) and J. B. YOUNG (Hughes Aircraft Co.)

Aug. 1983

**GSC-12745**

Vol. 7, No. 3, P. 267

Computerized instrument measures effective focal lengths to 0.01 percent accuracy. Laser interferometers measure mirror angle and stage coordinate y in instrument for accurate measurement of focal properties of optical systems. Operates under computer control to measure effective focal length, focal surface shape, modulation transfer function, and astigmatism.

**B83-10024**  
**COOLING BY PARA-TO-ORTHO-HYDROGEN CONVERSION**

A. SHERMAN and T. NAST (Lockheed Corp.)

Aug. 1983

**GSC-12770**

Vol. 7, No. 3, P. 268

Catalyst speeds conversion, increasing capacity of solid hydrogen cooling system. In radial-flow catalytic converter, para-hydrogen is converted to equilibrium mixture of para-hydrogen and ortho-hydrogen as it passes through porous cylinder of catalyst. Addition of catalyst increases capacity of hydrogen sublimation cooling systems for radiation detectors.

**B83-10025**  
**SUBMILLISECOND OPTICAL KNIFE-EDGE TESTING**

P. THURLOW (Hughes Aircraft Co.)

Aug. 1983

**GSC-12740**

Vol. 7, No. 3, P. 269

Fast computer-controlled sampling of optical knife-edge response (KER) signal increases accuracy of optical system aberration measurement. Submicrosecond-response detectors in optical focal plane convert optical signals to electrical signals converted to digital data, sampled and feed into computer for storage and subsequent analysis. Optical data are virtually free of effects of index-of-refraction gradients.

### 03 PHYSICAL SCIENCES

**B83-10026**

**DETERMINING THE POINT OF ZERO ZETA POTENTIAL IN SOLID SAMPLES**

C. E. BYVIK and B. REICHMAN (Christopher Newport College)

Aug. 1983

**LAR-12893**

**Vol. 7, No. 3, P. 270**

Technique for measuring pzpp in solid samples incorporates sample in photochemical cell and measures temperature dependence of flatband potential. Pzpp is obtained from slope of best straight line through measured points. Tests agree well with expected values. In technique sample does not have to be in powder form.

**B83-10027**

**VIEWER MAKES RADIOACTIVITY 'VISIBLE'**

L. I. YIN

Aug. 1983

**GSC-12640**

**Vol. 7, No. 3, P. 271**

Battery operated viewer demonstrates feasibility of generating three-dimensional visible light simulations of objects that emit X-ray or gamma rays. Ray paths are traced for two pinhole positions to show location of reconstructed image. Images formed by pinholes are converted to intensified visible-light images. Applications range from radioactivity contamination surveys to monitoring radioisotope absorption in tumors.

**B83-10028**

**BEAM SPLITTER INTRODUCES LITTLE ABERRATION**

N. L. EVANS JR. (CALTECH)

Aug. 1983

**NPO-15580**

**Vol. 7, No. 3, P. 272**

Placing beam splitter inside existing lens minimizes aberrations. Six channel beam splitter has optical paths of lengths equal to distances traveled by rays. Lens element cemented to each of exit faces of beam splitter is optically concentric with element cemented to entrance face and with center of curvature of monocentric optical system. Beam splitter makes it possible to form separate image in each wavelength channel of interest.

**B83-10029**

**OPTICAL-FIBER-TO-CHANNEL-WAVEGUIDE COUPLER**

G. O. RAMER (Hughes Aircraft Co.)

Aug. 1983

**NPO-15555**

**Vol. 7, No. 3, P. 273**

Holding device made by etching V-shaped grooves in silicon in coupler close tolerances are achieved for high-efficiency coupling between optical fibers with core diameter of 5  $\mu$ m and 110  $\mu$ m in cross section. Fibers are held in V-shaped grooves on silicon chips.

**B83-10030**

**CONTROLLING INDUSTRIAL NOISE**

Innovator Not Given (The Bionetics Corp.) Aug. 1983 See

Also NASA SP-5108 (N82-11858/NSP)

**LAR-13001**

**Vol. 7, No. 3, P. 273**

Handbook gives basic comprehensive information on noise in industrial environments. Intended to aid engineers in understanding measuring and controlling noise whether or not they have experiences in acoustics.

**B83-10140**

**ACOUSTIC EMISSIONS REVEAL COMBUSTION CONDITIONS**

D. N. R. RAMOHALLI (Caltech) and P. K. SESHAN (Caltech)

Oct. 1983

**NPO-15699**

**Vol. 7, No. 4, P. 369**

Turbulent-flame acoustic emissions change with air/fuel ratio variations. Acoustic emissions sensed and processed to detect inefficient operation; control system responds by adjusting fuel/air mixture for greater efficiency. Useful for diagnosis of combustion processes and fuel/air control.

**B83-10141**

**ELECTRON BEAM COULD PROBE RECOMBINATION CENTERS**

O. VONROOS (CALTECH)

Oct. 1983

**NPO-15285**

**Vol. 7, No. 4, P. 390**

Electron beam probe technique estimate electron/hole capture cross sections in semiconductors with wide band gaps. Amplitude-modulated electron beam induces short-circuit current collected by ohmic contacts. Phase shift between this current and electron-beam current measured as function of frequency. Results of measurements used to ascertain recombination rates and energy levels.

**B83-10142**

**SELF-MODULATED LASER RANGEFINDER**

J. B. ABSHIRE

Oct. 1983

**GSC-12761**

**Vol. 7, No. 4, P. 391**

Longitudinal resonance modes exploited. Self-modulated-laser ranging system exploits presence of signals differing in frequency by longitudinal mode separation frequency fm. Two square-law photodetectors have outputs modulated by fm, and phase difference between two outputs is related to target distance. Laser transmitter/receiver measures distances as well as displacements of distant objects (such as vibrating buildings).

**B83-10143**

**PYRHELIOMETER WITH IMPROVED ACCURACY**

R. S. ESTEY (CALTECH) and M. F. HANNA (CALTECH)

Oct. 1983

**NPO-15398**

**Vol. 7, No. 4, P. 393**

Instrument maintains components at constant temperature and allows tenfold improvement in instrumental accuracy. Two units make up improved pyreheliometer. Radiometer absorbs radiant energy and generates electrical signal. Control unit, which incorporates improvements, provides amplifiers, controls, and calibration circuits. Instrument 10 times more accurate than previous design.

**B83-10144**

**ESTIMATING WAVEGUIDE FEED DIRECTIVITY AND SPACING**

Y. RAHMAT-SAMII (CALTECH), P. W. CRAMER (CALTECH), K. E. WOO (CALTECH), and S. W. LEE (CALTECH)

Oct. 1983

**NPO-15603**

**Vol. 7, No. 4, P. 393**

Approximate curves simplify initial steps of antenna design. Maximum achievable directivity exponents plotted as functions of element spacing in wavelengths for equilateral triangular array of rectangular waveguides. Directivities and exponents calculated for circular waveguides, pyramidal horns, and other standard feeds. Designer quickly estimates element spacing necessary to achieve required directivity or directivity achievable.

**B83-10145**

**NORMAL-INCIDENCE SOFT-X-RAY MIRROR**

J. H. UNDERWOOD (CALTECH) and T. W. BARBEE JR. (Stanford)

Oct. 1983

**NPO-15828**

**Vol. 7, No. 4, P. 394**

Multilayered interference structure has about 6 percent reflectivity. Normal-incidence X-Ray Mirror, bent into spherical surface of radius 1.1mm used to image electroformed-nickel grid onto photographic film sensitive to soft X-rays. Grid set at distance of 1,067 mm from mirror, illuminated by simple Coolidge-type X-ray tube with carbon anode operated from 1.5KV supply. Film set at distance of 1,186 mm from mirror with resultant magnification of 1.11.

**B83-10146**

**MULTISPECTRAL DUAL-APERTURE SCHMIDT OBJECTIVE**

P. O. MINOTT

Oct. 1983

**GSC-12756****Vol. 7, No. 4, P. 395**

Off-axis focal planes make room for beam splitters. System includes two off-axis primary spherical reflectors, each concentric with refractive corrector at aperture. Off-axis design assures large aperture required for adequate spatial resolution. Separate images have precise registration, used for multispectral resource mapping or remote sensing.

**B83-10147**

**GRATING DEMULTIPLEXERS FOR OPTICAL SIGNALS**  
E. MAROM (Hughes Aircraft Co.) and O. G. RAMER (Hughes Aircraft Co.)

Oct. 1983

**LAR-12748 AND LAR-12749****Vol. 7, No. 4, P. 397**

Two systems proposed to increase wavelength resolution. Two paraboloidal reflectors and grating separate light into component colors. First paraboloid forms input light into nearly planar waves. Reflected from planar grating at various angles depending on wavelength. Second paraboloid focuses separate wavelengths to separate lines.

**B83-10148**

**FUSE PROTECTS PARABOLIC-DISH SOLAR COLLECTOR**

M. K. SELCUK (Caltech)

Oct. 1983

**NPO-15662****Vol. 7, No. 4, P. 397**

Sliding barrel and shutter protect against overheating. Downward movement of shutter initiated by melting of fuse wire that suspends it. Shutter lowered or raised under operator's control by depressuring or pressurizing hydraulic cylinder.

**B83-10149**

**COST EFFECTIVENESS OF HYBRID SOLAR POWER-PLANTS**

L. C. WEN (Caltech) and H. L. STEELE (Caltech)

Oct. 1983

**NPO-15735****Vol. 7, No. 4, P. 398**

Report discusses cost effectiveness of high-temperature thermal storage system for representative parabolic dish solar powerplant. Economic viability of thermal storage system assessed; cost and performance projections made; cost of electricity generated by solar power plant also calculated.

**B83-10150**

**SOLAR-POND RESOURCES IN THE UNITED STATES**

M. G. HURICK (Caltech)

Oct. 1983

**NPO-15681****Vol. 7, No. 4, P. 398**

Report describes survey of U.S. salt and brine deposits providing essential information for developers considering use of solar ponds for heat and electricity production. Sites classified as areas of ponds about 1 km<sup>2</sup>, or larger, accommodated in which salt, clay, and water are available.

**B83-10293**

**COMPACT CONCENTRATORS FOR SOLAR CELLS**

V. S. WHANG (TRW, Inc.)

Apr. 1984

**MFS-25511****Vol. 8, No. 1, P. 35**

Each cell in array has own concentrator. A Cassegrain Reflector combination of paraboloidal and hyperboloidal mirrors-used with conical reflector at each element of array. Three components direct light to small solar cell. No cooling fins, fans, pumps, or heat pipes needed, not even in vacuum.

**B83-10294**

**TESTING LARGE SOLAR MIRRORS**

M. J. ARGOLD (CALTECH), W. L. WALKER (CALTECH), R. S. LELAND (CALTECH), L. V. BUTLER (CALTECH), and E. W. DENNISON (CALTECH)

Apr. 1984

**NPO-15404****Vol. 8, No. 1, P. 36**

Mirror figure evaluated in terms of imaging properties. Equipment includes scanner for measuring irradiance distribution in solar image produced by gore and camera equipped with special apertures for determining magnitude and location of figure errors on gores.

**B83-10295**

**TWO-STAGE OFF-AXIS CYLINDRICAL SOLAR CONCENTRATOR**

R. WINSTON (University of Chicago), J. J. OGALLAGHER (University of Chicago), W. T. WELFORD (University of London), and D. E. ROCKEY (CALTECH)

Apr. 1984

**NPO-15484****Vol. 8, No. 1, P. 37**

Concentrator uses off-axis geometry to achieve efficient uniform illumination of photovoltaic cells. Primary reflector is parabolic cylinder and therefore readily adaptable to rolling up for transport and unrolling for deployment. Foldable cylindrical structure has potential for both terrestrial and space applications.

**B83-10296**

**CONTACTLESS MEASUREMENT OF PHYSICAL PROPERTIES**

D. D. ELLEMAN (CALTECH), T. G. WANG (CALTECH), E. H. TRINH (CALTECH), and A. CROONQUIST (CALTECH)

Apr. 1984

**NPO-15839****Vol. 8, No. 1, P. 38**

Surface tension and other properties determined from measurement of resonant frequency. Surface tension and other physical properties of molten and liquid samples excited at resonance measured by observing photographic or TV image and noting resonant frequency and rate of change. Technique used in normal gravity and low gravity in either vacuum or gaseous environment, where sample is positioned by electrostatic, acoustic, or magnetic forces.

**B83-10297**

**DRYING MILK WITH BOILER EXHAUST**

M. R. BROUSSARD (CALTECH)

Apr. 1984

**NPO-15923****Vol. 8, No. 1, P. 39**

Considerable energy saved in powdered-milk industry. Only special requirement boiler fired with natural gas or other clean fuel. Boiler flue gas fed to spray drier where it directly contacts product to be dried. Additional heat supplied by auxiliary combustor when boiler output is low. Approach adaptable to existing plants with minimal investment because most already equipped with natural-gas-fired boilers.

**B83-10298**

**HYDROGEN MASERS AS TIME AND FREQUENCY STANDARDS**

S. C. WARD (CALTECH)

Apr. 1984

**NPO-15858****Vol. 8, No. 1, P. 39**

Track each other with 100 times more precision than cesium standards. Geographically separated hydrogen masers tracked each other for more than year to within few parts in 10 to the 15th power. Frequency offset of hydrogen-maser output from hyperfine line frequency is function of ambient magnetic field, cavity mistuning, thermal motion of atoms in cavity and collisions of atoms with walls of the cavity. If maser remains at one location some of small offsets in frequency will remain constant throughout life of maser.

**B83-10299**

**FLUID/VAPOR SEPARATOR FOR VARIABLE FLOW RATES**

J. M. LEE (UCLA), C. CHUANG (UCLA), T. H. FREDERKING (UCLA), G. S. BROWN (UCLA), Y. KAMIOKA (UCLA), and J. VORREITER

Apr. 1984

**ARC-11401****Vol. 8, No. 1, P. 40**

Shutter varies gas throughput of porous plug. Variable

### 03 PHYSICAL SCIENCES

area exposed on porous plug allows to pass varying rates of vapor flow while blocking flow of liquid helium II from cryogenic bath. Applications in refining operations, industrial chemistry, and steam-powered equipment.

#### **B83-10300** **COMPUTATION OF BRAGG REFLECTION FOR LAYERED MICROSTRUCTURES**

J. W. UNDERWOOD (CALTECH) and T. W. BARBEE (CALTECH)  
Apr. 1984

**NPO-15880**

**Vol. 8, No. 1, P. 41**

Bragg diffractors analyzed for use in X-ray mirrors and other applications. SLM tailored to specific applications by varying layer thicknesses and number of layers to control reflectivity diffraction width, and wavelength resolution. Applications as glancing incidence mirrors or filters for wavelengths of few to few hundred angstroms.

#### **B83-10301** **HOLOGRAPHIC TWYMAN-GREEN INTERFEROMETER**

C. W. CHEN (CALTECH), J. C. WYANT (CALTECH), and J. B. BRECKINRIDGE (CALTECH)

Apr. 1984

**NPO-15754**

**Vol. 8, No. 1, P. 42**

Off-axis Fresnel zone plate used to obtain fringe visibility close to unity. Holographic Twyman-Green Interferometer (HTG) employs off-axis Fresnel zone plate (OFZP) as beam splitter and beam diverger in place of two separate elements that perform those functions in conventional Twyman-Green interferometer.

#### **B83-10302** **IMPROVED ELECTROSTATIC OPTICAL SYSTEM**

B. F. LEWIS (CALTECH)

Apr. 1984

**NPO-15774**

**Vol. 8, No. 1, P. 43**

Device suitable for molecular epitaxial formation of semiconductor components. Improved electrostatic lens system uses cylindrical mirror as central element between two tubular lenses. Aberrations introduced by mirror tend to cancel those introduced by tubular lenses. Result is order-of-magnitude improvement in chromatic or spherical compensation.

#### **B83-10303** **LEAST-SQUARES PREDICTION OF SOLAR ACTIVITY**

R. L. HOLLAND, C. RHODES, and H. C. EULER JR.

Apr. 1984 See Also NASA TM-8242 (N82-27221/NSP)

**MFS-25870**

**Vol. 8, No. 1, P. 44**

Studies of statistical methods for predicting future solar activity described in report containing extensive graphical and tabular presentations of analyses. Lagrangian-least-squares method, which gives best predictions presented in detail. FORTRAN source code for method given.

#### **B83-10304** **SOLAR HEATING AND COOLING DEVELOPMENT PROGRAM**

R. AAEN (Honeywell Technology Strategy Center) and A. GOSSLER (Honeywell Technology Strategy Center)

Apr. 1984

**MFS-27015**

**Vol. 8, No. 1, P. 44**

Heating is practical now, but cooling needs more development. Report describes program for design and development of solar heating and cooling systems having high performance, low cost and modular application. Describes main technical features of each of systems. Presents summary of performance and costs.

#### **B83-10305** **DESIGNING FLAT-PLATE PHOTOVOLTAIC ARRAYS**

R. G. ROSS JR. (CALTECH)

Apr. 1984

**NPO-15729**

**Vol. 8, No. 1, P. 45**

Report presents overview of state of art in design

techniques for flat-plate solar photovoltaic modules and arrays. Paper discusses design requirements, design analyses, and test methods identified and developed for this technology over past several years in effort to reduce cost and improve utility and reliability for broad spectrum of terrestrial applications.

#### **B83-10306** **MULTIPLE-WAVELENGTH METAL/HALIDE LASER**

N. M. NERHEIM (CALTECH)

Apr. 1984

**NPO-15256**

**Vol. 8, No. 1, P. 45**

Single device produces multiple lasing lines. Laser capable of producing many lasing lines has several reservoirs of halide lasant mixed with chlorides of copper, manganese and iron. Convection-control technique possible to rapidly change from one metal halide to another at maximum energy.

#### **B83-10307** **SCANNING XECL LASER**

J. B. LAUDENSLAGER (CALTECH), T. J. PACALA (CALTECH), and I. S. MCDERMID (CALTECH)

Apr. 1984

**NPO-15692**

**Vol. 8, No. 1, P. 45**

Applications of narrow-bandwidth laser include remote sensing and high-resolution spectroscopy. Scanning XeCl oscillator/ring-laser amplifier produces narrow spectral bandwidth (less than 0.003nm) over tuning range of 307.5 to 308.5 nm. Ring configuration has following advantages: oscillator decoupled from amplifier, output unidirectional, output beam uniform and inexpensive optics allow variable output coupling and cavity length.

#### **B83-10308** **SIMPLIFIED LASER TUNING**

I. S. MCDERMID (CALTECH) and T. J. PACALA (CALTECH)

Apr. 1984

**NPO-15690**

**Vol. 8, No. 1, P. 45**

Tuning arrangement employs single grating and two planar mirrors. Arrangement of front-surface mirrors and single holographic grating significantly reduces spectral bandwidth and simplified tuning of laser output. Laser used to induce fluorescence in measuring concentrations of trace species, such as OH radical, in atmosphere.

#### **B83-10309** **OBTAINING PULSES FROM A CW LASER**

J. S. MARGOLIS (CALTECH)

Apr. 1984

**NPO-15111**

**Vol. 8, No. 1, P. 46**

Two acousto-optic modulators operate in tandem. System generates pulses from output of continuous wave laser. Duration and repetition rate of pulses controlled.

#### **B83-10310** **CONTROLLING METAL-HALIDE VAPOR DENSITY IN LASERS**

T. J. PIVIROTTO (CALTECH)

Apr. 1984

**NPO-15021**

**Vol. 8, No. 1, P. 46**

Streams of buffer gas convect and dilute metal-halide vapor. Technique uses flow of buffer gas through reservoir, which contains heated metal halide, to convect vapors into discharge tube. Second stream of buffer gas dilutes vapor. Final vapor density in laser tube controlled and changed by adjusting either one or both of buffer gas flow rates.

#### **B83-10311** **FLUORINE MIXER/VAPORIZER FOR CHEMICAL LASERS**

A. GIANDOMENICO (CALTECH)

Apr. 1984

**NPO-15552**

**Vol. 8, No. 1, P. 46**

A mixer/vaporized chamber gasifies liquid fluorine before

It is injected into lasing cavity of hydrogen fluoride/deuterium fluoride laser. Fluorine vaporized by flow of helium.

**B83-10312  
IMPROVED LASER VELOCIMETER**

L. O. HEFLINGER (TRW, Inc.)

Apr. 1984

**MFS-25465**

**Vol. 8, No. 1, P. 46**

Self-aligning laser velocimeter uses simple lenses and Dopplerfrequency shift by scattering disk to monitor fluid motion in three dimensions.

**B83-10313  
SOLAR-COLLECTOR RADIOMETER**

J. M. KENDALL SR. (CALTECH)

Apr. 1984

**NPO-14986**

**Vol. 8, No. 1, P. 46**

Water-cooled Kendall radiometer measures output of solar energy concentrators. Unit measures irradiance up to 30,000 solar constants with 1 percent accuracy and responds to wavelengths from ultraviolet to far infrared.

**B83-10314  
CERAMIC SOLAR RECEIVER**

C. ROBERTSON JR. (General Electric Co.)

Apr. 1984

**NPO-15769**

**Vol. 8, No. 1, P. 46**

Solar receiver uses ceramic honeycomb matrix to absorb heat from Sun and transfer it to working fluid at temperatures of 1,095 degrees and 1,650 degrees C. Drives gas turbine engine or provides heat for industrial processes.

**B83-10315  
BRICKS AND CANS FOR THERMAL STORAGE**

H. SAHA (Alabama A & M University)

Apr. 1984

**MFS-25625**

**Vol. 8, No. 1, P. 47**

Water-filled cans and bricks provide efficient thermal storage for solar space and hot-water heating. Tests indicate thermal storage mediums suitable in both passive and active solar heating systems.

**B83-10316  
TWO-FLUID SOLAR POND**

F. L. LANSING (CALTECH)

Apr. 1984

**NPO-15419**

**Vol. 8, No. 1, P. 47**

Plastic covered solar pond uses two immiscible liquids of different densities to collect and store solar energy.

**B83-10317  
EFFECTS OF OUTDOOR SOILING ON PHOTOVOLTAIC MODULES**

A. R. HOFFMAN (CALTECH) and C. R. MAAG JR. (CALTECH)

Apr. 1984

**NPO-15186**

**Vol. 8, No. 1, P. 47**

Airborne contaminants degrade module performances. Report describes experiments to understand effects of airborne contaminants on sensitive surfaces of photovoltaic modules.

**B83-10318  
EFFECT OF TEMPERATURE ON FIBER-OPTIC DELAY**

L. A. BERGMAN (CALTECH), S. T. ENG (CALTECH), A. R. JOHNSTON (CALTECH), and G. F. LUTES (CALTECH)

Apr. 1984

**NPO-15148**

**Vol. 8, No. 1, P. 47**

Fiber/jacket interactions affect performance. Attenuation and phase measurements made to assess effect of temperature on signal delay and attenuation in two fiber-optic cable samples.

**B83-10319  
STABILIZING FIBER-OPTIC TRANSMISSION LINES**

G. F. LUTES (CALTECH) and K. Y. LAU (CALTECH)

Apr. 1984

**NPO-15036**

**Vol. 8, No. 1, P. 47**

Voltage-controlled optical phase shifter is key. Optical phase shifter stabilizes propagation delay of fiber-optic transmission line by compensating for temperature and pressure effects. Applicable to phased array antenna systems and very-long-baseline interferometer distribution systems.

**B83-10320  
IONIC REFRIGERATOR**

R. RICHTER (CALTECH)

Apr. 1984

**NPO-15288**

**Vol. 8, No. 1, P. 48**

With no moving parts, proposed refrigerator has long life. Thermal energy of refrigeration process transported by hydrogen ions that go through three phase changes in absorbing heat and three phase changes in dissipating heat.

**B83-10321  
ESTIMATING THE SOLUBILITY OF GASES IN BATTERY ELECTROLYTES**

D. D. LAWSON (CALTECH) and H. A. FRANK (CALTECH)

Apr. 1984

**NPO-15610**

**Vol. 8, No. 1, P. 48**

Estimates in excellent agreement with experimental values. Simple method proposed for estimating solubility of gases in electrolytes of lithium batteries using expressions for energy of vaporization and for molar volume.

**B83-10322  
EVAPORATION TOWER WITH PRILL NOZZLES**

E. R. DU FRESNE (CALTECH)

Apr. 1984

**NPO-15609**

**Vol. 8, No. 1, P. 48**

Tower more efficient than conventional evaporation equipment. Liquids such as milk and fruit juice concentrated by passing them through tiny nozzle to form droplets, then allowing droplets to fall through evacuated tower with cooled walls.

**B83-10323  
ACCELERATED SOLAR-UV TEST CHAMBER**

A. GUPTA (CALTECH) and E. G. LAUE (CALTECH)

Apr. 1984

**NPO-15063**

**Vol. 8, No. 1, P. 48**

Medium-pressure mercury-vapor lamps provide high ratio of ultraviolet to total power. Chamber for evaluating solar-ultraviolet (UV) radiation damage permits accelerated testing without overheating test specimens.

**B83-10324  
IMAGING BUBBLE FORMATION IN A DROP TUBE**

R. HELIZON (CALTECH) and M. C. LEE (CALTECH)

Apr. 1984

**NPO-15114**

**Vol. 8, No. 1, P. 48**

Entire process under control of computer. Computer-controlled image-acquisition system tracks object, such as water bubble, as it moves in drop tube. Ultimately, such tracking system used to observe fusion-pellet formation in drop furnace.

**B83-10325  
MICROWAVE RADIATION DETECTOR**

J. R. LESH (CALTECH)

Apr. 1984

**NPO-15932**

**Vol. 8, No. 1, P. 48**

Direct photon detector responds to microwave frequencies. Method based on trapped-ion frequency-generation standards proposed to detect radio-frequency (RF) radiation at 40.5 GHz. Technique used for directdetection (RF) communication, radar, and radio astronomy.

**B83-10539  
IMPROVED GAMMA-AND X-RAY PINHOLE CAMERA**

L. I. YIN

### 03 PHYSICAL SCIENCES

Nov. 1984

GSC-12851

Vol. 8, No. 2, P. 191

Electronic additions increase image quality. Digital image-processing equipment electronically performs functions of S1 and D2 improving resolution and adding capability for image storage and further processing. System useful in nuclear medicine or radioisotope imaging, tomography and nuclear industry.

B83-10540

ION ACCELERATOR MERGES SEVERAL BEAMS

G. ASTON (CALTECH)

Nov. 1984

NPO-15547

Vol. 8, No. 2, P. 192

Intense ion beam formed by merging multiple ion beamlets into one concentrated beam. Beamlet holes in graphite screen and focusing grids arranged in hexagonal pattern. Merged beam passes through single hole in each of aluminum accelerator and decelerator grids. Ion extraction efficiency, beam intensity, and focusing improved.

B83-10541

NEUTRON PROBE OF BUILDING-WALL COMPOSITION

J. I. TROMBKA and L. G. EVANS (Computer Sciences Corp.)

Nov. 1984

GSC-12808

Vol. 8, No. 2, P. 193

Walls of historic buildings charted by neutron radiography. Neutron source and Gamma-Ray Detector aligned with each other yield map of composition of wall. Points spaced for minimal overlap based on mean free path of gamma rays emitted from wall materials. Map indicates nature and extent of changes in building materials so proper treatment is applied.

B83-10542

COLLECTING LIGHT FROM POINT IMAGES

W. C. GOSS (CALTECH), E. F. TUBBS (CALTECH), and J. G. COHEN (CALTECH)

Nov. 1984

NPO-15887

Vol. 8, No. 2, P. 194

Light from sources at varying positions brought to fixed opening. In telescope field divided into 10 strips, 10 pairs of optical fibers moved laterally and longitudinally to any required position in their assigned strips. Fixed ends of fibers arrayed in line at spectrograph entrance slit. Concept developed to enhance efficiency of spectrographs on astronomical telescopes.

B83-10543

IMAGING FLUID FLOW

W. K. WITHEROW

Nov. 1984

MFS-25897

Vol. 8, No. 2, P. 195

Electro-optical system allows simultaneous viewing of schlieren, shadowgraph and interferometric images of volume of fluid under test. In imaging system cube beam splitters replaced by plate-type beam splitters or pellicle beam splitters.

B83-10544

VISUAL ALIGNMENT TECHNIQUE FOR INFRARED LIDAR

R. T. MENZIES (CALTECH) and U. P. OPPENHEIM (CALTECH)

Nov. 1984

NPO-15826

Vol. 8, No. 2, P. 196

Visible He/Ne laser beam substituted for invisible CO<sub>2</sub> beam during alignment. System accomplished visually by using low-power He/Ne laser previously adjusted to visible beam parallel to invisible infrared CO<sub>2</sub> laser beam. Method used to align adjacent telescopes in other optical systems.

B83-10545

AIRFLOW ASSISTS SOLAR RECEIVER

W. R. REVERE (CALTECH) and E. A. LAUMANN (CALTECH)

Nov. 1984

NPO-15784

Vol. 8, No. 2, P. 196

Heat loss by convection reduced. Simplified solar receiver concept involves inwardly directed flow of cooling air and 'air door' to reduce loss by convection. Receiver is constructed from inexpensive materials.

B83-10546

SUN TRACKER OPERATES A YEAR BETWEEN CALIBRATIONS

C. M. BERDAHL (CALTECH)

Nov. 1984

NPO-15810

Vol. 8, No. 2, P. 197

Low-cost modification of Sun tracker automatically compensates equation of time and seasonal variations in declination of Sun. Output of Scotch Yoke drive mechanism adjusted through proper sizing of crank, yoke and other components and through choice of gear ratios to approximate seasonal north and south motion of Sun. Used for industrial solar-energy monitoring and in remote meteorological stations.

B83-10547

ACOUSTIC IMAGING OF COMBUSTION NOISE

K. N. RAMOHALLI (CALTECH) and P. K. SESHAN (CALTECH)

Dec. 1984

NPO-15698

Vol. 8, No. 2, P. 198

Ellipsoidal acoustic mirror used to measure sound emitted at discrete points in burning turbulent jets. Mirror deemphasizes sources close to target source and excludes sources far from target. At acoustic frequency of 20 kHz, mirror resolves sound from region 1.25 cm wide. Currently used by NASA for research on jet flames. Produces clearly identifiable and measurable variation of acoustic spectral intensities along length of flame. Utilized in variety of monitoring or control systems involving flames or other reacting flows.

B83-10548

ION ENGINE WITH SOLID-ELECTROLYTE ION GENERATOR

R. RICHTER (CALTECH)

Nov. 1984

NPO-15809

Vol. 8, No. 2, P. 199

Working fluid utilized efficiently. Working fluid positive ions conducted through solid electrolyte to outside, then accelerated in external electric field. While in solid-electrolyte material, ions do not recombine with electrons: transported to surface with high ionization efficiency. Provides new way to generate beam of ions for implantation in semiconductors or other applications.

B83-10549

AIR-CONDITIONING FOR ELECTRIC VEHICLES

Z. POPINSKI (CALTECH)

Nov. 1984

NPO-15183

Vol. 8, No. 2, P. 199

Combination of ammonia-absorption refrigerator, roof-mounted solar collectors, and 200 degrees C service electric-vehicle motor provides evaporative space-heating/space cooling system for electric-powered and hybrid fuel/electric vehicles.

B83-10550

CONTROLLING TV-CAMERA F-STOP REMOTELY

G. L. TALLEY JR., D. R. HERBISON, and G. F. ROUTH

Nov. 1984

KSC-11269

Vol. 8, No. 2, P. 200

Lens opening of television camera controlled manually from remote location by simple and inexpensive data link without modifications to camera lens system. Allows closeup views of wide-brightness-range events otherwise hazardous for human operator.

B83-10551

HIGH-RESOLUTION X-RAY TELESCOPE

J. M. DAVIS (American Science & Engineering, Inc.), R. C. CHASE (American Science & Engineering, Inc.), and J. H. UNDERWOOD (CALTECH)

Nov. 1984

**NPO-15971** Vol. 8, No. 2, P. 200

X-ray telescope for mapping celestial X-ray sources from locations in space uses secondary mirror to magnify images formed by primary mirror. Secondary mirror with hyperboloid/hyperboloid surface located at focal plane of primary mirror.

**B83-10552**

**IMPROVED INFRARED MULTISPECTRAL SCANNER**

C. G. STANICH (Daedalus Enterprises, Inc.) and F. G. OSTERWISCH (Daedalus Enterprises, Inc.)

Nov. 1984

**NPO-16143** Vol. 8, No. 2, P. 200

Spectrometer scan head redesigned to accommodate larger spectrometer and two blackbody reference sources while remaining within space limitations of its aircraft mounting.

**B83-10553**

**LENSSLESS IMAGE SCANNER**

R. A. SCHINDLER (CALTECH)

Nov. 1984

**NPO-16004** Vol. 8, No. 2, P. 200

Image scanner uses moving and stationary parallel slits to produce pictures of visible, infrared, X-ray microwave, or acoustic sources. No lenses or mirrors required. Single detector views all parts of image simultaneously rather than raster making relatively-short exposure times possible. Potential applications of system include medical x-ray imaging.

**B83-10554**

**OPTICAL MEASUREMENT OF PARTICLE SIZE AND VELOCITY**

J. L. SMITH

Nov. 1984

**MFS-27036** Vol. 8, No. 2, P. 200

Dual-beam laser-Doppler anemometers simultaneously determine velocity and size distribution of particles in flowing fluid.

**B83-10555**

**IMPROVED HOLLOW CATHODE**

G. ASTON (CALTECH)

Nov. 1984

**NPO-15560** Vol. 8, No. 2, P. 200

Improved hollow cathode for neutral-beam injector ion sources rapidly started by dielectric breakdown of ignitor plug located at one end of open ended tube. Used in low-current ion implantation, milling, sputtering, and bombardment for surface treatment.

**B83-10556**

**CATALOG OF SPECTRAL LINES**

R. L. POYNTER (CALTECH) and H. M. PICKETT (CALTECH)

Nov. 1984

**NPO-15181** Vol. 8, No. 2, P. 201

Report describes computer accessible catalog of calculated and experimental spectral lines in frequency range between zero and 300 GHz for selected molecules, including chlorine oxide, bromine oxide, phosphine and oxygen.

**B83-10557**

**LASER-BEAM SEPARATOR**

I. S. MCDERMID (CALTECH)

Nov. 1984

**NPO-15723** Vol. 8, No. 2, P. 201

Train of prisms and optical stop separate fundamental beam of laser from second and higher order harmonics of beam produced in certain crystals and by stimulated Raman scattering in gases and liquids.

**B83-10558**

**MEASURING DELAY IN LASERS**

L. A. BERGMAN (CALTECH) and E. T. SVERRE (CALTECH)

Nov. 1984

**NPO-15242** Vol. 8, No. 2, P. 201

Technique measures delay, i.e., response time of modulated diode laser as function of temperature by comparing excitation signal to laser output signal with vector voltmeter.

**B83-10559**

**LASER DIODE SCHLIENEN PHOTOGRAPHY**

J. M. FRANKE and A. W. BURNER JR.

Nov. 1984

**LAR-12897** Vol. 8, No. 2, P. 201

Laser diodes preferable to conventional lasers or incandescent lamps for Schlieren flow analysis because they are smaller, more rugged, less costly and have lower power requirements.

**B83-10560**

**IMPROVED HEAT-ENGINE SOLAR-ENERGY SYSTEM**

D. C. MILLER (CALTECH)

Nov. 1984

**NPO-15762** Vol. 8, No. 2, P. 201

Heat engine solar-energy system improved by installing overcapacity heat exchanger and buffer loop between engine fluid and solar heated fluid.

**B83-10561**

**PREDICTING SOLAR DEFICITS**

R. G. ROSS JR. (CALTECH) and C. C. GONZALEZ (CALTECH)

Nov. 1984

**NPO-15667** Vol. 8, No. 2, P. 201

Statistical method uses available long term solar irradiance data at selected sites in United States to predict probable deviations from long term monthly averages. Technique useful in sizing solar collectors and backup storage systems to cover solar deficits.

**B83-10562**

**MODELING OF SOLAR CONCENTRATORS**

D. E. ROCKEY (CALTECH)

Nov. 1984

**NPO-15034** Vol. 8, No. 2, P. 201

Algorithm developed for predicting power output, uniformity of intensity and operating temperature of concentrator-enhanced photovoltaic solar cell arrays. Optimum values for parameters such as reflector geometry found prior to constructing scale models for testing.

**B83-10563**

**SALTLESS SOLAR PONDS**

E. I. LIN (CALTECH)

Nov. 1984

**NPO-15808** Vol. 8, No. 2, P. 202

Problems associated with heat storage in solar ponds eliminated by transparent insulating cover at surface of pond. Cover makes unnecessary salt gradient that suppresses natural convection within pond to promote thermal storage.

**B83-10564**

**PARABOLIC SOLAR COLLECTORS**

V. C. TRUSCELLO (CALTECH)

Nov. 1984

**NPO-15674** Vol. 8, No. 2, P. 202

Paper presents tutorial overview of point focusing parabolic reflectors for solar-energy collectors. Optical and thermal characteristics of collectors discussed in detail.

**B83-10565**

**HIGH-TEMPERATURE HELICAL-TUBE SOLAR RECEIVER**

C. ROBERTSON JR. (General Electric Co.) and L. MCCREIGHT (General Electric Co.)

## 03 PHYSICAL SCIENCES

Nov. 1984

**NPO-15768**

**Vol. 8, No. 2, P. 202**

Solar-thermal receiver used with circular parabolic concentrator to supply about 58 kW thermal power to Brayton engine or industrial process. Solar radiation focused into open end of cylindrical ceramic thermal inertial sleeve 8 in. in diameter that reradiates energy to helical heat exchanger tube surrounding sleeve.

**B83-10566**

**CONCENTRATOR-ENHANCED SOLAR ARRAY**

B. J. MORSE (Hughes Aircraft Co.)

Nov. 1984

**NPO-15628**

**Vol. 8, No. 2, P. 202**

Deployable solar array for satellites uses slanted low-mass planar mirrors as walls of trough to triple light falling on GaAs solar cells forming bottom of trough. Power-to-mass ratio of new design 42 percent higher than planar array of same power output.

**B83-10567**

**EFFICIENCY OF REFLECTION GRATINGS**

C. W. CHEN (University of Arizona) and J. C. WYANT (University of Arizona)

Nov. 1984

**NPO-15852**

**Vol. 8, No. 2, P. 202**

Dichromated gelatin plates evaluated as optical elements for phase-volume holography.

## 04 MATERIALS

**B83-10031**

**AROMATIC POLYIMIDES WITH GROUP VI LINKAGES**

T. L. ST. CLAIR, H. D. BURKS, and R. M. ELY

Aug. 1983 See Also NASA TR-84494(N82-27493/NSP)

**LAR-12980**

**Vol. 7, No. 3, P. 277**

New polymer system combines thermal and solvent resistant properties of aromatic polyimides with processability of PPX polymers. PPX polymers include polyphenylene oxide, polyphenylene sulfide, and polyphenylene sulfone classes. Generally more processable by hot melt or thermoplastic techniques than aromatic polyimides. PPX systems more susceptible to attack by solvents and have lower glass transition temperatures than PI group.

**B83-10032**

**FUEL-CELL REACTANT-GAS PURIFIER**

H. MCBRYAR and T. OLLILA (General Electric Co.)

Aug. 1983

**MSC-20103**

**Vol. 7, No. 3, P. 278**

Catalytic purifier removes oxygen from hydrogen feedlines just upstream of fuel-cell stack. Purifier consists of layer of platinum sandwiched between two sheets of porous polytetrafluoroethylene (PTFE). Platinum and PTFE elements stacked and ready for pressing. Purifier cut to size, pleated and inserted into convenient length of metal tubing. Purifier is 90 percent efficient in removing oxygen from gas stream containing 2 percent oxygen in hydrogen.

**B83-10033**

**RECYCLING LITHIUM CARBONATE/LITHIUM HYDROXIDE WASTE**

J. FLOWERS (Flowers Chemical Laboratories) and J. FLOWERS (Flowers Chemical Laboratories)

Aug. 1983

**KSC-11261**

**Vol. 7, No. 3, P. 279**

Hazardous waste disposal problem eliminated by regeneration.  $\text{Li}_2\text{CO}_3/\text{LiOH}$  recycling process relies on low

solubility of alkali carbonates in corresponding hydroxides.  $\text{Li}_2\text{CO}_3$  precipitate calcined to  $\text{Li}_2\text{O}$ , then rehydrated  $\text{LiOH}$ . Regeneration eliminates need to dispose caustic waste and uses less energy than simple calcination of entire waste mass.

**B83-10034**

**DESULFURIZING COAL BY CHLORINOLYSIS AND HYDROGENATION**

J. J. KALVINSKAS (CALTECH) and N. K. ROHATGI (CALTECH)

Aug. 1983

**NPO-15304**

**Vol. 7, No. 3, P. 280**

85 percent of organic and pyritic sulfur in coal removed by combination of chlorinolysis and hydrogenation. Coal is fed to hydrogenator after chlorination. Coal flows against hydrogen current increasing mixing and reducing hydrogen consumption. Excess hydrogen is recovered from gaseous reaction products. Product coal contained 62.5 percent less total sulfur than same coal after chlorination.

**B83-10035**

**STRONGER CARBON FIBERS FOR REINFORCED PLASTICS**

D. E. CAGLIOSTRO and N. R. LERNER

Aug. 1983

**ARC-11261**

**Vol. 7, No. 3, P. 280**

Process makes fibers 70 percent stronger at lower carbonization temperature. Stronger carbon fibers result from benzoic acid pretreatment and addition of acetylene to nitrogen carbonizing atmosphere. New process also makes carbon fibers of higher electrical resistance -- an important safety consideration.

**B83-10036**

**GELLED ANTI-ICING AGENTS**

O. F. MARKLES (Rockwell International Corp.) and H. H. SPERBER (Rockwell International Corp.)

Aug. 1983

**MSC-20088**

**Vol. 7, No. 3, P. 281**

Pectin added to antifreeze/water mixture. Formulations include water with dimethyl sulfoxide (DMSO) as deicer and pectin as gel former. Without gelling agent, deicer runs off vertical surfaces. Without pectin solution will completely evaporate in far less time. Agents developed have wide potential for ice prevention on runways, highways, bridges and sidewalks.

**B83-10037**

**PRESERVING COLOR IN DEVELOPED PHOTOGRAPHIC FILM**

R. B. HOOVER and C. M. RHODES

Aug. 1983

**MFS-23250**

**Vol. 7, No. 3, P. 282**

Controlled-atmosphere vault retards fading and deterioration of developed high speed film. Vault with externally controlled valve regulates flow of nitrogen gas from internally mounted tank. Gas purges ambient air from vault through purge valve and maintains vault pressure slightly above ambient.

**B83-10038**

**PROCESS FOR MOLDING NONREINFORCED (NEAT) RESINS**

G. E. DICKERSON

Aug. 1983

**LAR-12981**

**Vol. 7, No. 3, P. 283**

Void free moldings obtained for neat, condensation, thermosetting resins. Thermally and mechanically treat resin prior to molding to reduce amount of volatiles. With volatiles reduced molding temperature and pressure are applied in way to drive out remaining volatiles during molding.

**B83-10039**

**MEASURING DIFFUSION AND RECOMBINATION IN POLYCRYSTALLINE SILICON**

J. D. ZOOK (Honeywell, Inc.)  
Aug. 1983

**NPO-15601** Vol. 7, No. 3, P. 284

Light-beam-induced currents yield information about solar cell material. Apparatus measures short-circuit current generated when spot of concentrated light is scanned across grains and grain boundaries in material under test. Technique used to evaluate SOC samples for diffusion and recombination effects of cell processing and chemical and structural defects.

**B83-10040**  
**MEASURING DIFFUSION AND RECOMBINATION POLY-CRYSTALLINE SILICON**

G. E. POLLOCK, F. WOELLER, and D. R. KOJIRO  
Aug. 1983

**ARC-11431** Vol. 7, No. 3, P. 284

Modified silica spheres enhance chromatographic separation. Commercially available silica spheres are modified by reacting them with molecules containing isocyanate and isothiocyanate groups. Applications of surface derivatized spheres that result from reaction include analysis of samples produced by atmospheric or soil probes.

**B83-10041**  
**FIRE-RESISTANT COMPOSITES**

D. A. KOURTIDES and J. A. PARKER

Aug. 1983

**ARC-11331** Vol. 7, No. 3, P. 285

Resin blend produces high-char-yield, low-smoke composites. Diglycidyl Ether of Bis-(4-Hydroxyphenyl)-Fluorene is prepared by reacting epichlorohydrin and sodium hydroxide with 9,9-bis(hydroxyphenyl) fluorene. End of reaction determined by gas or liquid chromatography, mass spectroscopy or infrared techniques. Used to manufacture printed circuit boards and panels for buildings, ships and aircraft.

**B83-10042**  
**STANDARDS FOR EPOXIES USED IN MICROELECTRONICS**

S. V. CARUSO (Rockwell International Corp.), J. LICARI (Rockwell International Corp.), B. L. WEIGAND (Rockwell International Corp.), and C. SOYKIN (Rockwell International Corp.)

Aug. 1983

**MFS-25810** Vol. 7, No. 3, P. 286

Improved qualification standards and test procedures for epoxy adhesives used in assembly of high-reliability hybrid microcircuits listed in new report. Objective of standards to resolve problems in areas of outgassing, bond shear strength, corrosivity, volume resistivity, ionic impurities, electrical stability, and frequency of qualification testing.

**B83-10043**  
**MODIFIED ANTIFREEZE LIQUIDS FOR USE ON SURFACES**

R. O. LYNN

Aug. 1983

**MFS-25741** Vol. 7, No. 3, P. 286

Report presents results of evaluation of two antifreeze liquids, dimethyl sulfoxide and ethylene glycol and five viscosity modifiers: gelatin, gum tragacanth, starch, agarose powder and citrus pectin. Purpose of evaluation to find best way of dealing with frost formation on Space Shuttle.

**B83-10044**  
**SOLIDIFYING BI/MNBI AT LOW GRAVITY**

J. DRAUCH (Grumman Aerospace Corp.), R. LANGE (Grumman Aerospace Corp.), R. A. PIRICH (Grumman Aerospace Corp.), and W. POIT JR. (Grumman Aerospace Corp.)

Aug. 1983

**MFS-25736** Vol. 7, No. 3, P. 286

Directional solidification of Bi/MnBi magnetic alloy under low gravity enhances magnetic properties. Magnetic properties of low-gravity Bi/MnBi alloy make attractive

material for use in motors and other small electrical and electronic components.

**B83-10151**  
**SOLVENT-RESISTANT POLYSULFONES**

P. M. HERGENROTHER

Oct. 1983

**LAR-12931** Vol. 7, No. 4, P. 401

Polysulfones terminated with trimethylsilylethynyl, ethynyl, and phenylethynyl groups increased solvent resistance. Upon application of heat, with or without catalyst, end groups react to provide cross linking and chain extension. Result: temperature of polymer increased, more importantly, solvent resistance greatly improved. Solutions used conveniently for preparation of films, coatings, membranes, prepreg, and adhesive tapes.

**B83-10152**  
**MEASURING EPOXY-CURING KINETICS**

M. CIZMECIOGLU (Caltech)

Oct. 1983

**NPO-15710** Vol. 7, No. 4, P. 402

Key reaction parameters estimated from single run. Single DSC Curve used to construct linearized plot from which kinetic reaction parameters are obtained: vertical axis intercept proportional to activation energy, while slope equals reaction order. DSC methods show promise for rapid screening and estimation of cure kinetic parameters of epoxy resins.

**B83-10153**  
**SUPERCritical-MULTIPLE-SOLVENT EXTRACTION FROM COAL**

W. CORCORAN (Caltech), W. FONG (Caltech), P. PICHAI-HANARONG (Caltech), P. CHAN (Caltech), and D. LAWSON (Caltech)

Oct. 1983

**NPO-15767** Vol. 7, No. 4, P. 403

Large and small molecules dissolve different constituents. Experimental apparatus used to test supercritical extraction of hydrogen rich compounds from coal in various organic solvents. In decreasing order of importance, relevant process parameters were found to be temperature, solvent type, pressure, and residence time.

**B83-10154**  
**CALCIUM FREE ASBESTOS FOR FUEL CELLS**

B. A. SNITZER (United Technologies Corp.)

Oct. 1983

**MSC-20207** Vol. 7, No. 4, P. 404

Organic-acid salt removes unwanted calcium without weakening asbestos. Asbestos mixed with disodium ethylene diamine tetraacetic acid (disodium EDTA) in water and agitated for 2 hours. After disodium EDTA solution is drained away, asbestos contains only 0.02 to 0.1 percent calcium. Fiber structure of asbestos unaffected.

**B83-10155**  
**GENERATING SIF4 FROM H2SIF6**

K. C. HANSEN (Lamar University) and C. L. YAWS (Lamar University)

Oct. 1983

**NPO-15721** Vol. 7, No. 4, P. 404

Sodium and barium fluorosilicates precipitated and thermally decomposed into silicon tetrafluoride. Barium fluorosilicate thermally decomposes at lower temperatures in shorter times, to give same percentage yield of silicon tetrafluoride gas, than sodium fluorosilicate. Salt byproducts of decompositions recycled to precipitate fluorosilicates from hexafluorosilicic acid, the primary reactant.

**B83-10156**  
**IMPROVED O2/H2 GAS MIXTURE SENSOR**

L. C. MOULTHROP (General Electric Co.)

Oct. 1983

**MSC-20408** Vol. 7, No. 4, P. 406

## 04 MATERIALS

Monitor of mixture concentrations uses catalyzed and uncatalyzed temperature probe. Sensor includes Pt-catalyzed temperature probe mounted in line with similar uncatalyzed temperature probe. Use of common temperature probes and standard, flareless, high-pressure tubefittings resulted in design conducive to installation in almost any system. Suitable for use in regenerative fuel cells, life-support systems, and other closed systems.

**B83-10157**

### **DIRECTIONAL SOLIDIFICATION OF MONOTECTIC ALLOYS**

A. HELLAWELL (Michigan Technological University)  
Oct. 1983

**MFS-25767**

**Vol. 7, No. 4, P. 408**

Cooling at certain rates produced fibrous composite structures. Alloy samples melted in alumina or graphite crucibles under argon and then chillcast into 33-mm-diameter rods or sucked directly into 3-mm-bore alumina or silica tubes. Alloying not automatic with immiscible components of different densities and widely different melting points.

**B83-10158**

### **PREDICTING SINTERED-METAL RESISTIVITY FROM POROSITY**

R. F. FEDORS (CALTECH)  
Oct. 1983

**NPO-15587**

**Vol. 7, No. 4, P. 407**

Formula with one adjustable parameter relates electrical resistivity of sintered metal plate to porosity of plate. Sintered plate formed by heating compressed metal powder- without melting until particles adhere. Sintered nickel plates of high porosity used as substrates for electrodes in nickel/cadmium batteries.

**B83-10159**

### **DIRECTIONAL SOLIDIFICATION OF MONOTECTIC ALLOYS**

A. HELLAWELL (Michigan Technological University)  
Oct. 1983

**MFS-25767**

**Vol. 7, No. 4, P. 408**

Cooling at certain rates produced fibrous composite structures. Alloy samples melted in alumina or graphite crucibles under argon and then chillcast into 33-mm-diameter rods or sucked directly into 3-mm-bore alumina or silica tubes. Alloying not automatic with immiscible components of different densities and widely different melting points.

**B83-10160**

### **STRESS CORROSION CRACKING OF CERTAIN ALUMINUM ALLOYS**

K. R. HASSE (Kaiser Aluminum & Chemical Corporation) and R. C. DORWARD (Kaiser Aluminum & Chemical Corporation)  
Oct. 1983

**MFS-25773**

**Vol. 7, No. 4, P. 409**

SC resistance of new high-strength alloys tested. Research report describes progress in continuing investigation of stress corrosion (SC) cracking of some aluminum alloys. Objective of program is comparing SC behavior of newer high-strength alloys with established SC-resistant alloy.

**B83-10161**

### **CRACKS IN GLASS POLYMERS INDUCED BY SOLVENT ABSORPTION**

R. F. FEDORS (CALTECH)  
Oct. 1983

**NPO-15072**

**Vol. 7, No. 4, P. 409**

Combination of soluble particles and absorbed solvents cause polymer cracking. New failure mechanism in glassy polymers identified. Cracking caused by presence of particles insoluble in polymer matrix but soluble in solvent.

Experiments performed and equations describe cracking phenomenon set forth in concise report.

**B83-10162**

### **FREEZE/THAW PROPERTIES OF CELLULAR GLASS**

P. O. FRICKLAND (CALTECH), E. L. CLELAND (CALTECH), and T. HASEGAWA (CALTECH)  
Oct. 1983

**NPO-15854**

**Vol. 7, No. 4, P. 409**

Without moisture, temperature cycles do no harm. Experiments described in new report indicate inherent material variability greater deterrent to application of material than freeze/thaw effects.

**B83-10163**

### **RANDOM LIFE CURVES FOR COMMON ENGINEERING MATERIALS**

T. HU (Rockwell International Corp.)  
Oct. 1983

**MSC-20433**

**Vol. 7, No. 4, P. 410**

Program incorporates non-Rayleigh effects in evaluating structure life. RMS2 computer program converts constant amplitude fatigue allowables to random-loading allowables, with influence of peak distribution and mean stress considered. RMS2 written in FORTRAN IV.

**B83-10326**

### **ONE-STEP COAL LIQUEFACTION**

S. A. QADER (CALTECH)  
Apr. 1984

**NPO-15891**

**Vol. 8, No. 1, P. 51**

Steam injection improves yield and quality of product. Single step process for liquefying coal increases liquid yield and reduces hydrogen consumption. Principal difference between this and earlier processes includes injection of steam into reactor. Steam lowers viscosity of liquid product, so further upgrading unnecessary.

**B83-10327**

### **MOLTEN SLAG WOULD BOOST COAL CONVERSION**

J. F. FERRALL (CALTECH)  
Apr. 1984

**NPO-15711**

**Vol. 8, No. 1, P. 52**

Reactor increases residence time of uncovered char. Near-100-percent carbon conversion achievable in reactor incorporating molten slag bath. Slag maintains unconverted carbon impinging on surface at high temperatures for longer period of time, enhancing conversion.

**B83-10328**

### **SILICONE CERENKOV-RADIATOR MATERIAL**

V. BALASUBRAHMANYAN, J. F. ORMES, and R. E. STREITMATTER  
Apr. 1984

**GSC-12805**

**Vol. 8, No. 1, P. 52**

Dyes enhance visible output. Three fluorescent dyes combine to increase output of silicone material that normally has low yield of visible Cerenkov radiation by converting large amount of available ultraviolet photons into visible light.

**B83-10329**

### **DETECTING METHANE LEAKS**

W. B. GRANT (CALTECH) and E. D. HINKLEY (CALTECH)  
Apr. 1984

**NPO-15790**

**Vol. 8, No. 1, P. 53**

Remote sensor uses laser radiation backscattered from natural targets. He/Ne Laser System for remote scanning of Methane leaks employs topographic target to scatter light to receiver near laser transmitter. Apparatus powered by 1.5kW generator transported to field sites and pointed at suspected methane leaks. Used for remote detection of natural-gas leaks and locating methane emissions in landfill sites.

**B83-10330****POLYCARBOSILAZANE-RESIN POLYMERIZATION PROCESS**

B. PENN, E. LEDBETTER III, and J. CLEMONS

Apr. 1984

**MFS-25758****Vol. 8, No. 1, P. 54**

Process suitable for production of silicon nitride/silicon carbide fibers. High-tensile-strength silicon carbide/silicon nitride fibers prepared by pyrolyzing fibers drawn from melt of polycarbosilazane resin. Such fibers show promise as replacements for carbon fibers in high-strength composites for automotive, aerospace, and other applications where high electrical conductivity of carbon fibers makes them unsuitable.

**B83-10331****SIXNYCZ FIBERS FOR SAFER COMPOSITES**

F. LEDBETTER III, B. PENN, and J. CLEMONS

Apr. 1984

**MFS-25721****Vol. 8, No. 1, P. 55**

Silicon nitride/silicon carbide fibers prepared by pyrolysis of polycarbosilazanes proposed substitute for carbon fibers. Silicon nitride/silicon carbide fibers tested pyrolyzed from polycarbosilazanes prepared from tris(N-methylamino)methylsilane. Polycarbosilazane resin drawn into fiber from melt, treated and pyrolyzed. Pyrolyzed fibers are shiny black. Tests show new fibers have physical properties comparable to graphite but with lower conductivity.

**B83-10332****SILICON NITRIDE ANTIREFLECTION COATINGS FOR PHOTOVOLTAIC CELLS**

C. JOHNSON, T. WYDEVEN, and K. DONOHOE (Tegal Corp.)

Apr. 1984

**ARC-11447****Vol. 8, No. 1, P. 55**

Chemical-vapor deposition adapted to yield graded index of refraction. Silicon nitride deposited in layers, refractive index of which decreases with distance away from cell/coating interface. Changing index of refraction allows adjustment of spectral transmittance for wavelengths which cell is most effective at converting light to electric current. Average conversion efficiency of solar cells increased from 8.84 percent to 12.63 percent.

**B83-10333****IMPROVING TRACE-ION SENSITIVITY**

R. N. BUGGLE (Honeywell, Inc.)

Apr. 1984

**MFS-25766****Vol. 8, No. 1, P. 56**

Background noise reduced by some special precautions. Blanket of argon flows over solution so no chance for contamination from air to creep in. Conventional pump replaced with one made of polytetrafluoroethylene component and all metal couplings eliminated from flow lines. Used to improve quality control in integrated circuit fabrication, lens fabrication, and vacuum-tube assembly.

**B83-10334****DISCHARGE EXTRACTS OXYGEN FROM CO<sub>2</sub>**

R. S. LUCE (Lockheed Missiles &amp; Space Co.)

Apr. 1984

**ARC-11305****Vol. 8, No. 1, P. 57**

Process under development supplies oxygen for life support in hazardous environments. Prototype CO<sub>2</sub> reactor vessel produces oxygen from carbon dioxide at expense of about 100 watt-hours of electricity per liter of gas reduced. Design changes to improve efficiency include narrowing gap between walls to operate at lower voltages and increasing area of one electrode while decreasing area of other to reduce capacitance.

**B83-10335****PERFLUOROALKYLENE-ETHER TRIAZINE ELASTOMERS**

R. W. ROSSER, T. S. CHEN (San Jose State University),

and C. CHENG (San Jose State University)

Apr. 1984

**ARC-11402****Vol. 8, No. 1, P. 58**

New process yields product that resists heat and action of oxygen and water. Ring closing step, which gives elastomer its stability, imidoamidine dinitrile reacts with perfluoroether acid, yielding prepolymer. Prepolymer then treated with ammonia and cured by heating to form polymer. Elastomers are highly resistant to heat, oxidation, and hydrolysis.

**B83-10336****ELASTOMER-MODIFIED POLYIMIDES**

G. M. FOHLEN, J. PARKER, and I. K. VARMA

Apr. 1984

**ARC-11400****Vol. 8, No. 1, P. 58**

New resins yield laminates with improved mechanical properties. Ingredients of Modified Polymer include bisimide of formula 1 and amine-terminated elastomer. Cure effected by heating to temperature suited to particular ingredients used, generally in range of 200 degrees to 300 degrees C. Solution of solvent and reactants used for fabricating fiber-reinforced structures or as adhesive.

**B83-10337****PREDICTING MOISTURE ABSORPTION IN COMPOSITE MATERIALS**

J. R. HAINES (McDonnell Douglas Corp.)

Apr. 1984

**MSC-20109****Vol. 8, No. 1, P. 60**

Heat transport programs adaptable for absorption analysis. Lightweight sandwich panel specimen used for comparison of water absorption measurements with program predictions. In program model, moisture -- like heat in heat-transport problem moves through variety of materials and structures along complex paths.

**B83-10338****IMPROVED POLYIMIDE INTUMESCENT COATING**

I. O. SALYER (University of Dayton) and L. B. FOX (University of Dayton)

Apr. 1984

**ARC-11369****Vol. 8, No. 1, P. 60**

New polyimide intumescent coating uses titanium dioxide and glass microballons as nucleating agents to improve foaming characteristics of commercially-available polyimide precursor resin. Used for coating interior surfaces in commercial aircraft.

**B83-10339****EVALUATION OF STRUCTURAL CELLULAR GLASS**

M. A. ADAMS (CALTECH) and J. G. ZWISSLER (CALTECH)

Apr. 1984

**NPO-15680****Vol. 8, No. 1, P. 61**

Preliminary design information presented. First report discusses state of structural-cellular-glass programs as of June 1979. Second report gives further details of program to develop improved cellular glasses and to characterize properties of glasses and commercially available materials.

**B83-10340****MICROFISSURING IN NICKEL-BASED-ALLOY WELDS**

R. G. THOMPSON (Clemson University)

Apr. 1984

**MFS-25815****Vol. 8, No. 1, P. 61**

Cracking mechanisms proposed. Investigation of physical metallurgy of near-solidus intergranular cracking or microfissuring in Inconel 718 alloy welds described in report. Investigation sought to identify cause of microfissuring and quantify its behavior.

**B83-10341****IMPROVED THERMOSETTING IMIDE RESINS**

G. M. FOHLEN, J. A. PARKER, and I. K. VARMA (NRC)

Apr. 1984

**ARC-11368****Vol. 8, No. 1, P. 62**

## 04 MATERIALS

Modified resins have lower curing temperature. Imide monomers are chemically modified to lower cure temperature by 90 degrees, without compromising flame resistance of cured resins made from them.

### **B83-10342** **STRESS-CORROSION CRACKING IN MARTENSITIC PH STAINLESS STEELS**

T. HUMPHRIES and E. NELSON  
Apr. 1984

**MFS-25400** Vol. 8, No. 1, P. 62

Precipitation-hardening alloys evaluated in marine environment tests. Report describes marine-environment stress-corrosion cracking (SCC) tests of three martensitic precipitation hardening (PH) stainless-steel alloys.

### **B83-10343** **NITROGEN SUPPLY USES HYDRAZINE**

D. B. HEPPNER (Life Systems, Inc.)  
Apr. 1984

**ARC-11464** Vol. 8, No. 1, P. 62

Liquid hydrazine dissociated and residual gas removed to produce almost pure nitrogen. Nitrogen-generation module catalytically dissociates liquid hydrazine then dissociates and separates product gases to yield almost pure nitrogen.

### **B83-10344** **WALNUT HULLS CLEAN ALUMINUM**

W. R. COLBERG, G. H. GORDON, and C. H. JACKSON  
Apr. 1984

**MFS-27012** Vol. 8, No. 1, P. 63

Hulls inflict minimal substrate damage. Walnut hulls found to be best abrasive for cleaning aluminum surfaces prior to painting. Samples blasted with walnut hulls showed no compressive stress of surface.

### **B83-10345** **LOW-PRESSURE ALCOHOL DISTILLATION**

D. O. FRAZIER, F. W. ZUR BURG, and J. C. CODY  
Apr. 1984

**MFS-25516** Vol. 8, No. 1, P. 63

Heat requirements lowered for process. Temperature requirements lowered enough to make solar heat absorbed by flat-plate collectors feasible energy source. Alcohol produced without adding other solvents, eliminating need for dehydration or hydrocarbon stripping as final step.

### **B83-10346** **DIESEL PARTICULATE DESTRUCTION**

L. C. YANG (CALTECH)  
Apr. 1984

**NPO-15426** Vol. 8, No. 1, P. 63

Pulsed electrical discharge eliminates particulates in diesel exhaust. Particulates in diesel exhaust gas destroyed by passing them through agglomerator and series of high voltage-biased grids.

### **B83-10347** **DISSOLVING BUBBLES IN GLASS**

M. C. WEINBERG (CALTECH), P. I. ORONATO (GTE Corp.), and D. R. UHLMANN (MIT)  
Apr. 1984

**NPO-15105** Vol. 8, No. 1, P. 63

Analytical expression used to calculate time it takes for stationary bubbles of oxygen and carbon dioxide to dissolve from glass melt. Technique based on analytical expression for bubble radius as function time, with consequences of surface tension included.

### **B83-10348** **PACKAGING NUCLEAR AND CHEMICAL WASTE FOR DISPOSAL**

T. G. WANG (CALTECH)  
Apr. 1984

**NPO-15454** Vol. 8, No. 1, P. 63

In proposed method, nuclear and chemical waste quickly encapsulated in hollow silicon spheres by forming, filling and sealing sphere. Process entirely automated.

### **B83-10349** **EXTRACTING OIL FROM TAR SANDS**

L. B. FORD (CALTECH) and D. DALY (CALTECH)  
Apr. 1984

**NPO-15760** Vol. 8, No. 1, P. 63

Recovery of oil from tar sands possible by batch process, using steam produced by solar heater. In extraction process, solar heater provides steam for heating solvent boiler. Boiling solvent removes oil from tar sands in Soxhlet extractor.

### **B83-10350** **MONITORING LIGNIN CONTENT IN PAPER PROCESSING**

H. G. BOETTGER (CALTECH)  
Apr. 1984

**NPO-15796** Vol. 8, No. 1, P. 64

Feedstock and finished pulp analyzed and controlled automatically. System acquires samples from feed hopper, digester, and blow tank. Sample homogenized, washed, and dried while conveyed to flash pyrolyzer. In pyrolyzer material converted into basic constituent, mostly compounds of molecular weight less than 200.

### **B83-10351** **CERAMICS FOR SOLAR RECEIVERS**

A. A. KUDIRKA (CALTECH)  
Apr. 1984

**NPO-15763** Vol. 8, No. 1, P. 64

Materials for high-temperature use reviewed. Report discusses characteristics of ceramics and assesses potential of candidate materials in solar receivers. Design requirements presented, including those for receiver with fluid exit temperatures up to 1,425 degrees C.

### **B83-10352** **SIALON ELECTRODES AND INSULATORS FOR MHD DEVICE**

W. M. PHILLIPS (CALTECH)  
Apr. 1984

**NPO-14945** Vol. 8, No. 1, P. 64

Rectangular magnetohydrodynamic (MHD) channel structure for electrical power generation designed using pure sialon ceramic for insulating portion of structure and metal-bearing sialon cermet for conducting portion.

### **B83-10353** **REMOVING IMAGES FROM MICROFILM**

L. L. TAYLOR (CALTECH)  
Apr. 1984

**NPO-15146** Vol. 8, No. 1, P. 64

Film softened, scraped, and then dried. Unwanted images removed from microfilm for softening base film with hot water, scraping film and drying with isopropyl alcohol. Method simple and no visible damage to film.

### **B83-10354** **GLASS FOR SOLAR CONCENTRATORS**

F. L. BOUQUET (CALTECH)  
Apr. 1984

**NPO-14923** Vol. 8, No. 1, P. 64

Report identifies four commercially available glasses as promising reflectors for solar concentrators. Have properties of high reflectance (80 to 96 percent), lower cost than first-surface silver metalization, and resistance to environmental forces.

### **B83-10355** **REDUCING SOOT IN DIESEL EXHAUST**

J. BELLAN (CALTECH)  
Apr. 1984

**NPO-15715** Vol. 8, No. 1, P. 64

Electrically charged fuel improves oxidation. Fuel injection system reduces amount of soot formed in diesel engines. Spray injector electrically charges fuel droplets as they enter cylinder. Charged droplets repel each other, creating, dilute fuel mist easily penetrated by oxygen in cylinder.

**B83-10356**  
**THREE-ZONE CATALYST RESISTS SULFUR POISONING**  
G. E. VOECKS (CALTECH), M. F. STEPHANOPOULOS (CALTECH), and J. HOUSEMAN (CALTECH)  
Apr. 1984

**NPO-14827** Vol. 8, No. 1, P. 65  
Three-zone catalyst bed uses different types of nickel catalysts to convert sulfur-containing hydrocarbon fuels to hydrogen and carbon monoxide. Zones designed to achieve conversion with minimal residue of unconverted hydrocarbon, no soot and minimal sulfur contamination.

**B83-10357**  
**COMBINED SILANE PYROLYSIS AND SILICON-PARTICLE MELT**  
H. LEVIN (CALTECH)  
Apr. 1984

**NPO-15510** Vol. 8, No. 1, P. 65  
Melter directly coupled to pyrolyzer eliminates difficulties of transport. Proposed coupling of free-space silane pyrolyzer and melter without intervening steps produce molten silicon with no problems of fine-particle movement, storage, contamination in transport, or oxide formation.

**B83-10358**  
**EPOXY GROUT WITH SILICA THICKENER**  
C. E. MCCLUNG (Monsanto Research Corp.)  
Apr. 1984

**NPO-15202** Vol. 8, No. 1, P. 65  
Grout cures quickly, even in presence of hydraulic oil. Grout is mixture of aggregate particles, finely-divided silica, epoxy resin, and triethylenetetramine curing agent, with mixture containing about 85 percent silica and aggregate particle sand 15 percent resin and curing agent. Silica is thickening agent and keeps grout from sagging.

**B83-10359**  
**MEASURING TRACE HYDROCARBONS IN SILANES**  
L. A. LESSER (Union Carbide Corp.)  
Apr. 1984

**NPO-15273** Vol. 8, No. 1, P. 65  
Technique rapid and uses standard analytical equipment. Silane gas containing traces of hydrocarbons injected into carrier gas of moist nitrogen having about 0.2 percent water vapor. Carrier, water and silane pass through short column packed with powdered sodium hydroxide which combines moisture and silane to form nonvolatile sodium silicate. Carrier gas free of silane but containing nonreactive hydrocarbons, pass to silica-gel column where chromatographic separation takes place. Hydrocarbons measured by FID.

**B83-10360**  
**PLATED METAL POWDERS FOR ELECTRODE PASTES**  
D. B. BICKLER (CALTECH)  
Apr. 1984

**NPO-15161** Vol. 8, No. 1, P. 65  
Metal grains to be sintered precoated with frit metal. Coated metal powders used to make ink-like electrode pastes for printing and sintering electrode-fabrication process. Grains of base metal coated with lowmelting-point-, lead or tin-- by electroless deposition.

**B83-10361**  
**RHENIUM PREVENTS CORROSION**  
M. A. APPEL (CALTECH)  
Apr. 1984

**NPO-15011** Vol. 8, No. 1, P. 66  
Rhenium layer inside carbon-composite thrust chamber

prevents corrosion when liquid fluorine/hydrazine rocket engine is fired. Liner also eliminates erosion of solid propellant carbon nozzels.

**B83-10362**  
**HYDROGEN PRODUCTION FROM HEAVY FUELS**  
G. E. VOECKS (CALTECH) and M. F. STEPHANOPOULOS (CALTECH)  
Apr. 1984

**NPO-14826** Vol. 8, No. 1, P. 66  
Better heat transfer properties avoid sulfur poisoning of catalyst. Monolithic supported catalyst allows initiation of steam reforming to take place more rapidly at inlet section of reactor.

**B83-10363**  
**MAKING THERMOPLASTICS FLAME-RESISTANT**  
W. A. MUELLER (CALTECH), J. D. INGHAM (CALTECH), and W. W. REILLY (CALTECH)  
Apr. 1984

**NPO-14857** Vol. 8, No. 1, P. 66  
Inorganic hydrate-salt filler coated with elastomer containing acidic groups imparts flame and smoke retardancy to thermoplastics while preventing degradation of impact resistance that results from high filler loadings in thermoplastic.

**B83-10364**  
**RADIATION IMPROVES MATERIALS BONDING**  
F. L. BOUQUET (CALTECH)  
Apr. 1984

**NPO-14995** Vol. 8, No. 1, P. 66  
Bonds with fluorocarbons made with surface preparation. Irradiating rubber-based adhesives produce strong adhesive bond with fluorocarbons without extensive surface preparation.

**B83-10365**  
**DEWATERING PEAT WITH ACTIVATED CARBON**  
N. K. ROHATGI (CALTECH)  
Apr. 1984

**NPO-15113** Vol. 8, No. 1, P. 66  
Proposed process produces enough gas and carbon to sustain itself. In proposed process peat slurry is dewatered to approximately 40 percent moisture content by mixing slurry with activated carbon and filtering with solid/liquid separation techniques.

**B83-10366**  
**IMPROVED GAS SEAL FOR ELECTROLYTIC CELLS**  
R. RICHTER (CALTECH)  
Apr. 1984

**NPO-15163** Vol. 8, No. 1, P. 66  
Breakage by differential thermal expansion reduced. Cells for hot electrolysis of gases improved by design that reduces vulnerability of gas seals to breakage at operating temperature of about 1000 degrees C.

**B83-10568**  
**RECOVERING ZINC FROM DISCARDED TIRES**  
E. R. DU FRESNE (CALTECH)  
Nov. 1984

**NPO-16046** Vol. 8, No. 2, P. 205  
Zinc sulfate monohydrate sold at profit. Shredded tire material steeped in three sulfuric acid baths to extract zinc. Final product removed by evaporating part of solution until product crystallizes out. Recovered as zinc sulfate monohydrate and sold as fertilizer or for general use.

**B83-10569**  
**PACKED ALUMINA ABSORBS HYPERGOLIC VAPORS**  
J. J. THOMAS (Florida Institute of Technology) and D. M. MAURO (Florida Institute of Technology)  
Nov. 1984

**KSC-11278** Vol. 8, No. 2, P. 206  
Beds of activated alumina effective as filters to remove

## 04 MATERIALS

hypergolic vapors from gas streams. Beds absorb such substances as nitrogen oxides and hydrazines and may also absorb acetylene, ethylene, hydrogen sulfide, benzene, butadiene, butene, styrene, toluene, and xylene. Bed has no moving parts such as pumps, blowers and mixers. Reliable and energy-conservative. Bed readily adapted to any size from small portable units for use where little vapor release is expected to large stationary units for extensive transfer operations.

### **B83-10570 CONTAINERLESS SOLIDIFICATION OF AMORPHOUS METALS**

M. C. LEE (CALTECH) and W. L. JOHNSON (CALTECH)  
Nov. 1984  
NPO-15776

Vol. 8, No. 2, P. 207

Method produces large amorphous alloys. Spheres of amorphous metal alloys formed and collected after molten samples coated and cooled in drop tube. Coated spheres cooled acoustically and cryogenically. Amorphous specimens 5mm in diameter or larger possible.

### **B83-10571 CHARRING, NONMELTING EPOXY FOAMS**

C. B. DELANO (Acurex Corp.)

Nov. 1984  
MFS-25911

Vol. 8, No. 2, P. 208

Addition of vanadium compounds prevents melting. For safety, structural plastic foam should turn into rigid char when it burns, without melting. Addition of small amounts of vanadium compounds to some epoxy resins promotes char formation.

### **B83-10572 OXIDATION-RESISTANT SLURRY COATING FOR CARBON-BASED MATERIALS**

J. L. SMIALEK

Nov. 1984  
LEW-13951

Vol. 8, No. 2, P. 208

New process uses paint sprayer and vacuum furnace to produce silicon carbide outer layer. In cross section of silicon and silicon carbide reaction zone, top layer of silicon adheres to silicon carbide layer. Crystals prominent on melted top surface of slurry coating. Process especially useful in coating repair.

### **B83-10573 TWO-LAYER GLASS THERMAL-CONTROL COATING**

D. A. STEWART, H. E. GOLDSTEIN, and D. B. LEISER  
(Stanford University)

Nov. 1984  
ARC-11164

Vol. 8, No. 2, P. 209

Optical properties endure high temperatures. Coating has outer scattering layer and inner high emissivity layer. Absorptivity/emissivity ratio less than 0.4. Coating withstands repeated exposure to temperatures in excess of 2,000 degrees F. Coating has industrial uses in solar-energy equipment, high temperature chemical processing systems, laboratory equipment and high temperature instrumentation.

### **B83-10574 CONTINUOUS MONITORING OF MELT COMPOSITION**

R. E. FRAZER (CALTECH) and T. W. ANDREWS (CALTECH)

Nov. 1984  
NPO-15896

Vol. 8, No. 2, P. 210

Compositions of glasses and alloys analyzed and corrected in real time. Spectral analysis and temperature measurement performed simultaneously on molten material in container, such as open-hearth furnace, crucible or tank of continuous furnace. Speed of analysis makes it possible to quickly measure concentration of volatile elements depleted by prolonged heating.

### **B83-10575 LOW-DENSITY HIGH-STRENGTH FOAMED MATERIALS**

T. WANG (CALTECH), D. ELLEMAN (CALTECH), and J. M. KENDALL JR. (CALTECH)  
Nov. 1984  
NPO-15411

Vol. 8, No. 2, P. 211

Molten bubbles of metal or plastic coalesce into strong, lightweight materials that look like solidified foam. Bubbles formed in compartment that receives molten material and compressed gas that fills bubbles. Compartment has matrix of nozzles. Leaving nozzles, bubbles fall into acoustic chamber and coalesce; then drop through funnel and are cast into desired shape by extrusion or molding. Materials used for construction, extruded into molds, sawed, nailed, and generally handled as wood.

### **B83-10576 ESTIMATING THE LIFETIMES OF NICKEL/CADMIUM CELLS**

R. F. FEDORS (CALTECH), S. D. HONG (CALTECH), A. GUPTA (CALTECH), and M. CIZMECIOGLU (CALTECH)  
Nov. 1984  
NPO-15145

Vol. 8, No. 2, P. 212

Equation based on model of flaw growth. Model assumes cell fails by growth of preexisting flaws. Flaws described by three important quantities: total number of flaws, distribution of flaw sizes and rate of flaw growth. When flaw reaches critical size failure occurs. Flaw concept, in addition to providing ready explanation for reduced lifetime, predicts two important characteristics: statistical variability of lifetime data and dependence of lifetime on volume of sample.

### **B83-10577 FIRE-RESISTANT TFE EXTRUSIONS**

A. T. SHEPPARD (Martin Marietta Corp.)

Nov. 1984  
MFS-25917

Vol. 8, No. 2, P. 212

Fire resistance of extruded tetrafluoroethylene (TFE) polymers improved by substitution of chlorinated hydrocarbon as wetting agent. Replacement of naphtha with perchloroethylene yields polymer that extrudes well and generates fewer pinholes. Product less susceptible to fire during manufacturing and in service.

### **B83-10578 IN SITU CROSS-LINKING OF POLYVINYL ALCOHOL FILMS**

W. H. PHILIPP, L. C. SHU, and C. E. MAY

Nov. 1984 See Also NASA-TP-1407 (N79-21128/NSP)

LEW-13135

Vol. 8, No. 2, P. 213

Films or impregnated matrices readily made from aqueous polyvinyl alcohol solution. Controlled thickness films made by casting precise quantities of aqueous polymer solution on smooth surface, allowing water to evaporate and then removing film. Composite separators formed in similar fashion by impregnating cloth matrix with polyvinyl alcohol solution and drying composite. Insoluble thin hydrophilic membranes made from aqueous systems, and use of undesirable organic solvents not required.

### **B83-10579 BINDER FOR CARBON-FIBER COATING**

W. L. DOWLER (CALTECH), K. N. RAMOHALLI (CALTECH), S. P. S. YEN (CALTECH), W. A. MUELLER (CALTECH), and J. HARPER (CALTECH)

Nov. 1984  
NPO-14988

Vol. 8, No. 2, P. 214

Insoluble, even coating formed by soaking in polyacrylic acid. Carbon fiber material prepared by soaking in solution of 20 percent polyacrylic acid in water. Material blotted and dried at 120 degrees C for at least 2 hours. Dried material reacted with boiling aqueous solution of calcium acetate. Treated material removed from boiling solution, blotted, dried at 120 degrees C, washed with distilled water, and dried again.

**B83-10580****DYE INDICATORS FOR ACIDIC OR BASIC SURFACE CONTAMINATION**A. LAKIN (Rockwell International Corp.) and F. SCHULER (Rockwell International Corp.)  
Nov. 1984**MFS-19387****Vol. 8, No. 2, P. 214**

Application of pH-sensitive dye solution serves as test for acidic or basic contamination of critical bonding surface. Aqueous solution of 0.1 percent Direct Red No. 28 capable of indicating acid activating solution down to 10 parts per million on hardware and tooling. Dye did not cause detectable contamination of surface.

**B83-10581****CONTAINERLESS PROCESSING OF ADVANCED GLASSES**R. HAPPE (Rockwell International Corp.) and K. KIM (Rockwell International Corp.)  
Nov. 1984**MFS-27002****Vol. 8, No. 2, P. 214**

Report describes investigation of containerless processing of glass, conducted in preparation of gravity-free processing experiments on board Space Shuttle. 105 candidate glass materials screened. Large number of oxide proportions studied and ternary phase diagram of glass formation developed as result.

**B83-10582****DESTROYING TOXIC WASTES**

G. E. VOECKS (CALTECH)

Nov. 1984

**NPO-15655****Vol. 8, No. 2, P. 215**

Toxic pesticides and halogenated hydrocarbons converted to fuels and harmless waste by catalyzed combustion. These product gases used directly as fuel or catalytically converted to methanol.

**B83-10583****HOLLOW SPHERES OF METALLIC GLASS**

M. C. LEE (CALTECH)

Nov. 1984

**NPO-15991****Vol. 8, No. 2, P. 215**

Uniform hollow spheres of gold/lead/antimony glass formed by blowing bubbles of molten metal into helium-filled drop tube. Useful in fusion target applications.

**B83-10584****PLASMA-SPRAYED COPPER TIE-IN FOR NICKEL PLATING**

J. W. LOMBARD (Rockwell International Corp.) and J. E. OTOUSA (Rockwell International Corp.)

Nov. 1984

**MFS-19481****Vol. 8, No. 2, P. 215**

Foam insulation nickel-plated with one less step. Changing tie-in layer from plasma-sprayed nickel to plasma-sprayed copper eliminates intermediate copper electroplating step previously required.

**B83-10585****MAKING SIXNYCZ FIBERS BY PYROLYSIS**

R. MARKLE (Battelle Columbus Laboratories), I. SEKRCIOGLU (Battelle Columbus Laboratories), D. HILL (Battelle Columbus Laboratories), R. R. WILLIS (Battelle Columbus Laboratories), and R. SINCLAIR (Battelle Columbus Laboratories)

Nov. 1984

**MFS-25621****Vol. 8, No. 2, P. 215**

Investigation part of continuing effort to produce fibers strong enough to replace graphite in fiber/polymer composites.

**B83-10586****ETCHANTS FOR SOME CORROSION-RESISTANT METALS**

J. SIMMONS (Martin Marietta Aerospace)

Nov. 1984 See Also NASA CR-161431 (N80-25414/NSP)  
**MFS-25467****Vol. 8, No. 2, P. 216**

Solutions that etch some corrosion-resistant metals described in test report. Etchants selected remove at least 0.4 mil of surface material per hour from nickel alloys, austenitic stainless steel, and annealed titanium alloys, without intergranular attack.

**B83-10587****HOT MICROFISSURING IN NICKEL ALLOY**R. G. THOMPSON (University of Alabama) and A. NUNES  
Nov. 1984 See Also NASA CR-161878 (N82-10194/NSP)**MFS-25763****Vol. 8, No. 2, P. 216**

Experiments in intergranular cracking of nickel alloy near solidus temperature discussed in contractor report. Purpose of investigation development of schedule for welding, casting, forging, or other processing of alloy without causing microfissuring.

**B83-10588****ADDITIONAL HEAT TREATMENT FOR SILICA-FIBER INSULATION**E. MADUK (Lockheed Missiles & Space Co., Inc.), I. CARPENTER (Lockheed Missiles & Space Co., Inc.), and E. GZOWSKI (Lockheed Missiles & Space Co., Inc.)  
Nov. 1984**MSC-20600****Vol. 8, No. 2, P. 216**

Presintering heat treatment found to prevent cracking in silica-fiber billets used to make thermally-insulating tiles.

**B83-10589****CATALYTIC COAL LIQUEFACTION WITH IRON SULFATE**

S. A. QADER (CALTECH)

Nov. 1984

**NPO-15727****Vol. 8, No. 2, P. 216**

Very high conversion yields demonstrated with iron sulfate used in solution with water or solvent to impregnate coal.

**B83-10590****SAMPLING OF SILICON POWDER FOR IMPURITY ANALYSIS**

K. A. YAMAKAWA (CALTECH) and O. R. MCCULLOUGH (CALTECH)

Nov. 1984

**NPO-15840****Vol. 8, No. 2, P. 216**

Electron beam forms dense pellets of powdered silicon for Zeeman analysis. Sampling method focuses electron beam on submicron silicon powder. Process enhances quality control in production of low-cost silicon powder for semiconductor industry.

**B83-10591****SILANE PYROLYSIS WITH SILICON-SEED AEROSOL**

R. C. FLAGAN (CALTECH) and M. K. ALAM (CALTECH)

Nov. 1984

**NPO-16054****Vol. 8, No. 2, P. 217**

Large silicon particles result from controlled pyrolysis of silane. Mixture of 1 percent silane in nitrogen pyrolyzed at 300 degrees C to generate aerosol of silicon seed particles.

**B83-10592****AUTOMATED MAGNETIC SUSCEPTIBILITY ANALYSIS**

T. J. RATHZ

Nov. 1984

**MFS-25935****Vol. 8, No. 2, P. 217**

Microprocessor-controlled susceptometer measures cryogenic temperature dependence of ac magnetic susceptibility of small cylindrical samples.

**B83-10593****REMOVING SULFUR DIOXIDE FROM FLUE GASES**

G. R. GAVALAS (CALTECH) and M. F. STEPHANOPOULOS (CALTECH)

Nov. 1984

## 04 MATERIALS

**NPO-15758** Vol. 8, No. 2, P. 217  
In situ removal of SO<sub>2</sub> in flue gases and fluidized-coal combustors, with no waste product possible using NaO/LiO as regenerable supported molten sorbent.

**B83-10594**  
**X-RAY-DIFFRACTION ANALYSIS OF NB/GE ALLOYS**  
J. H. DAVIS (University of Alabama) and K. HOUSE (University of Alabama)  
Nov. 1984

**MFS-27038** Vol. 8, No. 2, P. 217  
Investigation of series of niobium/germanium alloys produced by supercooling discussed in report.

**B83-10595**  
**CONDUCTIVE PLASMA-SPRAYED COATINGS**  
V. F. HRIBAR (CALTECH)  
Nov. 1984

**NPO-15927** Vol. 8, No. 2, P. 217  
Normal emittance of oxidized titanium foil used as plume shields at high temperature significantly increased by plasma coating with specific ceramic materials.

**B83-10596**  
**HIGH-TEMPERATURE, LOW-GRAVITY CASTING FURNACE**

H. M. KING, J. R. SHORT, R. E. SHURNEY, T. F. MORRIS, R. A. PARR, M. H. JOHNSTON, and D. D. WEBB  
Nov. 1984

**MFS-25605** Vol. 8, No. 2, P. 217  
Up to six different samples processed. Experimental melting and casting furnace designed to perform metallurgical studies in low gravity.

**B83-10597**  
**FURNACE FOR RAPID HEATING AND COOLING**  
R. M. POORMAN  
Nov. 1984

**MFS-25707** Vol. 8, No. 2, P. 218  
Furnace heats specimen to above 1,200 degrees C and then cools it to below 900 degrees C in just a few minutes. Compressed solid reactant provides heat; liquid carbon dioxide provides cold.

## 05 LIFE SCIENCES

**B83-10045**  
**HEART-RATE AND BREATH-RATE MONITOR**  
T. G. COOPER (Narco Scientific)  
Aug. 1983

**MSC-20078** Vol. 7, No. 3, P. 289  
Circuit requiring only four integrated circuits (IC's) measures both heart rate and breath rate. Phase-locked loops lock on heart-rate and respiration-rate input signals. Each loop IC contains two phase comparators. Positive-edge-triggered circuit used in making monitors insensitive to duty-cycle variations.

**B83-10046**  
**MICROPROCESSOR-BASED NEURAL-PULSE-WAVE ANALYZER**

G. K. KOJIMA and F. BRACCHI (Universita di Milano, Milan)  
Aug. 1983

**ARC-11388** Vol. 7, No. 3, P. 290  
Microprocessor-based system analyzes amplitudes and rise times of neural waveforms. Displaying histograms of measured parameters helps researchers determine how many nerves contribute to signal and specify waveform

characteristics of each. Results are improved noise rejection, full or partial separation of overlapping peaks, and isolation and identification of related peaks in different histograms.

**B83-10164**  
**FLOWTHROUGH BACTERIA-DETECTION SYSTEM**  
D. C. GRANA and J. R. WILKINS  
Oct. 1983

**LAR-12871** Vol. 7, No. 4, P. 413  
Online system allows repetitive cycling of sample intake, bacteria counting and sterilization. System measures bacteria count by using sample/incubate/measure cycle. Steps in cycle are on/off operations to cycle automated easily.

**B83-10165**  
**LIGHTWEIGHT, ECONOMICAL DEVICE ALLEVIATES DROP FOOT**  
B. C. DEIS  
Oct. 1983

**LAR-12259** Vol. 7, No. 4, P. 414  
Corrective apparatus alleviates difficulties in walking for victims of drop foot. Elastic line attached to legband provides flexible support to toe of shoe. Device used with flat (heelless) shoes, sneakers, crepe-soled shoes, canvas shoes, and many other types of shoes not usable with short leg brace.

**B83-10166**  
**TRANSDUCER JOINT FOR KIDNEY-STONE ULTRASONICS**  
E. D. ANGULO  
Oct. 1983

**GSC-12652** Vol. 7, No. 4, P. 415  
Ultrasonic therapy for kidney stones improved by new way of connecting wire-probe ultrasonic waveguide to transducer. Improved mounting allows joint to last long enough for effective treatment. Sheath and rubber dampers constrain lateral vibration of wire waveguide. Combination of V-shaped mounting groove, sheath, and rubber dampers increases life expectancy of wire 15 times or more.

**B83-10167**  
**SHARP-FOCUS COMPOSITE MICROSCOPE IMAGING BY COMPUTER**

R. J. WALL (CALTECH)  
Oct. 1983

**NPO-15207** Vol. 7, No. 4, P. 416  
Enhanced depth of focus aids medical analysis. Computer image-processing system synthesizes sharply-focused composite picture from series of photomicrographs of same object taken at different depths. Computer rejects blurred parts of each photomicrograph. Remaining in focus portions form focused composite. System used to study alveolar lung tissue and has applications in medicine and physical sciences.

**B83-10367**  
**ACOUSTIC TOOTH CLEANER**  
J. S. HEYMAN  
Apr. 1984

**LAR-12471** Vol. 8, No. 1, P. 69  
Acoustically-energized water jet aids in plaque breakdown. Acoustic Wand includes acoustic transducer 1/4 wave plate, and tapered cone. Together elements energize solution of water containing mild abrasive injected into mouth to help prevent calculus buildup.

**B83-10368**  
**AUTOMATED COLIFORM ANALYSIS**  
K. NISHIOKA, D. NIBLEY (The Boeing Co.), E. JEFFERS (The Boeing Co.), and R. BROOKS (The Boeing Co.)  
Apr. 1984

**ARC-11322** Vol. 8, No. 1, P. 70  
Hydrogen evolved by coliform bacteria transferred to

separate measurement cell. Electroanalytic cell mounted in insulated temperature-control bath cycled between culturing temperature and sterilizing temperature. Flow of materials into and out of cell controlled by electrically operated valves.

**B83-10369**  
**ADJUSTABLE WALKER FOR THE HANDICAPPED**

R. G. KITTS  
Apr. 1984

**LAR-12990** Vol. 8, No. 1, P. 71

Front legs adjust at touch of lever for use on stairs or ramps. Spring loaded legs extend when lever is depressed by user. Legs lock in position when lever is released. Lever mounted on either side of walker or on both sides, so legs operated independently.

**B83-10370**  
**REMOVING BIOSTATIC AGENTS FROM FERMENTATION SOLUTIONS**

E. R. DU FRESNE (CALTECH)  
Apr. 1984

**NPO-15806** Vol. 8, No. 1, P. 72

Liquid carbon dioxide inexpensive solvent. Inexpensive process proposed for removing such poisons as furfural and related compounds from fermentation baths of biomass hydrolysates. New process based on use of liquid carbon dioxide as extraction solvent. Liquid CO<sub>2</sub> preferable to such other liquid solvents as ether or methylene chloride.

**B83-10371**  
**COMPUTER ANALYSIS OF EYE BLOOD-VESSEL IMAGES**

R. J. WALL (CALTECH) and B. S. WHITE (CALTECH)  
Apr. 1984

**NPO-15527** Vol. 8, No. 1, P. 72

Technique rapidly diagnoses diabetes mellitus. Photographs of 'whites' of patients' eyes scanned by computerized image analyzer programmed to quantify density of small blood vessels in conjunctiva. Comparison with data base of known normal and diabetic patients facilitates rapid diagnosis.

**B83-10372**  
**INFLATABLE RESCUE CAPSULES**

J. L. BAKER  
Apr. 1984

**MFS-25677** Vol. 8, No. 1, P. 72

Rescue spheres transfer people from disabled vehicle to rescue vehicle. Container, inflatable sphere, constructed of gastight thermalprotective fabric to provide protection during transfer.

**B83-10598**  
**HIGH-FLOW ASYMMETRIC REVERSE-OSMOSIS MEMBRANES**

M. C. KATZ and T. J. WYDEVEN  
Nov. 1984

**ARC-11359** Vol. 8, No. 2, P. 221

Water-soluble polymer membrane insolubilized by transition-metal salt. Thin layer of lower permeability material joined with thicker layer of higher permeability material. Two layers chemically identical or chemically distinct. They differ in density, compactness or other respects. Used to purify or desalinate seawater, brackish water, or industrial or domestic wastewater.

**B83-10599**  
**SOLVENT EXTRACTION OF FURFURAL FROM BIOMASS**

M. F. HUMPHREY (CALTECH)  
Nov. 1984

**NPO-15987** Vol. 8, No. 2, P. 222

Solvent-extraction method reduces energy required to remove furfural produced during acid hydrolysis of biomass. Acid hydrolysis performed in vessel containing both solvents and reacting ingredients. With intimate contact between

solvents and aqueous hydrolysis liquor, furfural removed from liquor almost as fast as it forms.

**B83-10600**  
**SPECULATION ON ULTRASONIC DISINTEGRATION OF ARTERIAL DEPOSITS**

J. M. CLEMONS and D. M. KORNFIELD  
Nov. 1984

**MFS-25161** Vol. 8, No. 2, P. 222

Small ultrasonic probe, in conjunction with aspirator breaks up and removes atherosclerotic plaque from insides of arteries.

**B83-10601**  
**YEASTS WITH INCREASED GLYCOGEN LEVELS**

M. N. DASTOOR (CALTECH), G. R. PETERSEN (CALTECH), W. W. SCHUBERT (CALTECH), and B. O. STOKES (CALTECH)  
Nov. 1984

**NPO-15571** Vol. 8, No. 2, P. 222

Chemical/biological process produces single-cell food from waste carbon dioxide and hydrogen. Used in reactor for producing single-cell food.

## 06 MECHANICS

**B83-10047**  
**INSTRUMENT MEASURES AIRFLOW FRICTION WITHOUT CONTACT**

D. J. MONSON  
Aug. 1983

**ARC-11354** Vol. 7, No. 3, P. 293

Dual beam laser interferometer determines airflow friction against body by measuring time-varying thickness of wind sheared oil film. Measurements yield skin friction between film and airstream. Errors from prerun oil flow, tunnel starting transients, and initial surface waves therefore eliminated.

**B83-10048**  
**REDUCED AIRCRAFT-ENGINE NOISE**

H. K. TANNA (Lockheed Corp.), W. H. BROWN (Lockheed Corp.), and C. K. TAM (Lockheed Corp.)  
Aug. 1983 See Also NASA CR-3454 (N81-30908/NSP)

**LAR-12890** Vol. 7, No. 3, P. 294

Shock structure modified to eliminate associated noise. Shock wave repeats in supersonic flow adjoining subsonic flow layer. When supersonic layer is added, shock wave is partially transmitted at interface. Result is almost total elimination of shock pattern after one or two reflections. Technique applicable to inverted as well as to normal-velocity-profile coannular jets and used to eliminate or reduce shock noise of turbojet engines.

**B83-10049**  
**NOISE CONTROL IN PROPELLER-DRIVEN AIRCRAFT**

D. C. RENNISON (Bolt Beranek and Newman, Inc.) and J. F. WILBY (Bolt Beranek and Newman, Inc.)  
Aug. 1983 See Also NASA CR-159200(N80-25102/NSP)

**LAR-12954** Vol. 7, No. 3, P. 295

Analytical model predicts noise levels inside propeller-driven aircraft during cruise at mach 0.8. Double wall sidewalls minimize interior noise and weight. Model applied to three aircraft with fuselages of different size (wide-body, narrow-body, and small-diameter) to determine noise reductions required to achieve A-weighted sound level not to exceed 80 dB.

## 06 MECHANICS

**B83-10050**

**DISCRIMINATING BETWEEN LIQUID AND GAS FLOWS**  
C. M. BERDAHL (CALTECH)

Aug. 1983

**NPO-15531**

**Vol. 7, No. 3, P. 295**

Flow sensor distinguishes flowing gases from liquids. Sensor allows liquids to pass, but would signal valve to turn off flow of gases. Concept developed for propulsion systems in which liquid fuel is forced out of storage tank by high-pressure gas. Controller stops flow of gas from fuel tank after liquid has been depleted.

**B83-10051**

**SHELL-TILE THERMAL-PROTECTION SYSTEM**

I. O. MACCONOCHIE, A. G. LOWSON, and H. N. KELLY  
Aug. 1983

**LAR-12862**

**Vol. 7, No. 3, P. 296**

Durable shell-tile thermal-protection system consists of interlocking upper and lower hard caps, incorporating appropriate stiffeners and enclosing lightweight fibrous insulation. New shell tile more durable than reusable surface insulation (RSI) currently used on Space Shuttle orbiter.

**B83-10052**

**CHECKING SURFACE CONTOURS**

D. VELEGA (Beech Aircraft Corp.)

Aug. 1983

**MSC-20318**

**Vol. 7, No. 3, P. 297**

Rubber impressions viewed with optical comparator. Simple mold constructed from aluminum sheet or any other easily shaped material compatible with silicone rubber ingredients. Mold placed over surface to be measured. Newly-mixed silicone rubber compound poured in mold and allowed to cure.

**B83-10053**

**ELECTRICAL DISSIPATION MEASUREMENT OF POLYMER PHASE TRANSITIONS**

E. R. LONG JR. and A. SCHUSZLER II

Aug. 1983

**LAR-12861**

**Vol. 7, No. 3, P. 298**

Technique measures solid/solid, glass/rubber, and liquid/liquid transition temperatures in polymers having dipole moments. Technique based on change in dipole packing that occurs with each transition and measured as change in electrical dissipation factor. Change in dipole packing occurring with each transition sensed by effect on dissipation factor.

**B83-10054**

**DETERMINING THE ORIENTATION OF ANISOTROPIC MATERIALS**

F. E. SUGG (Rockwell International Corp.) and P. J. HODGETTS (Rockwell International Corp.)

Aug. 1983

**MSC-20229**

**Vol. 7, No. 3, P. 299**

Ultrasonics probe direction of tile fibers. Hand-held acoustic transducer determines fiber orientation of heat resistant tiles. Transducers head placed on outer surface of painted tile. Signals from receiving transducers displayed on two-channel oscilloscope. Application suggests extending technique to inspection of other anisotropic materials. Plywood and fiber/epoxy composites examined to determine fiber direction; ultrasonics used to find direction of roll in sheet metal and other rolled products.

**B83-10055**

**MEASURING ELASTIC MODULUS OF SINTERED METAL**

R. F. FEDORS (CALTECH) and A. F. EASTMAN (CALTECH)  
Aug. 1983

**NPO-15589**

**Vol. 7, No. 3, P. 299**

Technique minimizes effect of substrate on thin sintered coating. Uniaxial tension test yields approximate value for elastic modulus of sintered material on thin substrate.

Electrode composed of central perforated nickel plated steel sheet about 4 mils (0.1mm) thick, coated on each face by porous sintered nickel about 8 mils (0.2mm) thick.

**B83-10056**

**DISPENSING SMALL MEASURED VOLUMES OF LIQUID**  
G. LARSON (United Space Boosters, Inc.) and J. SMITH (United Space Boosters, Inc.)

Aug. 1983

**MFS-25690**

**Vol. 7, No. 3, P. 300**

Dispensing unit measures, filters, and unloads oil into container. Used in automobile manufacturing to dispense antifreeze solution into radiators or oil into engines, transmissions, or differentials. Uses gaseous nitrogen to control pressure, flow rate, and quality precisely, with minimal contamination from atmosphere.

**B83-10057**

**CHARACTERIZING SHEAR PROPERTIES OF MEMBRANES**

B. SIMPSON (Lockheed Missiles & Space Co., Inc.)

Aug. 1983

**MFS-25745**

**Vol. 7, No. 3, P. 301**

Method devised to obtain static shear stiffness data for membranes. Shear deflection of membrane measured under various applied static shear loads, and measurements plotted. Match attempted between experimental plot and predicted load-vs.-deflections curves until best fitting theoretical curve is found.

**B83-10058**

**MEASURING ULTRASONIC SHEAR-WAVE VELOCITY**  
J. NUMMELIN (Rockwell International Corp.)

Aug. 1983

**MFS-19680**

**Vol. 7, No. 3, P. 302**

New technique improves accuracy of measurements of ultrasonic shearwave velocity. Technique eliminates need to measure incident sound angle. Technique contains groove in which steel sphere is placed. Sphere act as reference point for measuring path lengths and propagation times. Velocity measurements are within 1 percent of published data.

**B83-10059**

**PROBE ARRAY FOR TESTING PRINTED-CIRCUIT SUBSTRATES**

A. ROISON (General Electric Co.), C. ALBERT (General Electric Co.), C. BIANCHI (General Electric Co.), and J. EHLAND (General Electric Co.)

Aug. 1983

**GSC-12759**

**Vol. 7, No. 3, P. 303**

Array of tiny probes tests complex printed circuit boards prior to mounting of microcircuit chips and other active and passive components. Insertion and alignment of board, performance of entire computer-controlled test, and printing of results requires about a minute; performed manually same tests require as much as 30 hours.

**B83-10060**

**SAMPLE HOLDER FOR CRYOGENIC ADHESIVE SHEAR TEST**

F. E. LEDBETTER, J. M. CLEMONS, W. T. WHITE, B. PENN, and M. L. SEMMEL

Aug. 1983

**MFS-25729**

**Vol. 7, No. 3, P. 304**

Five samples tested in one cooldown. Holder mounted in testing machine. Submerged in cryogenic liquid held in cryostat. Movable crosshead of testing machine moves gradually downward. Samples placed under tension, one after another, starting with top one; each sample fails in turn before next is stressed.

**B83-10061**

**GAS-TEMPERATURE MEASUREMENT WITH MINIMAL PERTURBATION**

T. S. FU (Rockwell International Corp.) and M. QUAN

(Rockwell International Corp.)

Aug. 1983

**MSC-20338** Vol. 7, No. 3, P. 305

Method for measuring temperature of hot turbulent gases uses three heatflux calorimeters. One calorimeter measures radiative heat flux, while other two measure total heat flux (convective and radiative), at two different temperatures. Adapted for commercial uses in such operations as monitoring temperatures of flue gases, piped liquid or gaseous products, internal-combustion or jet engine exhausts.

**B83-10062**

**TWO-DEGREE-OF-FREEDOM MOUNT SYSTEM FOR FLUTTER MODELS**

M. G. FARMER

Aug. 1983 See Also NASA TM-83302 (N82-23549/NSP)

**LAR-12950** Vol. 7, No. 3, P. 306

Flexible rods replace conventional bearing supports to minimize structural damping. Aerodynamic damping not masked by effects of mount system, making more accurate studies possible of how aerodynamic damping varies as flow over model changed. New system called PAPA.

**B83-10063**

**MEASURING SMALL LEAK HOLES**

D. E. KOCH (Rockwell International Corp.) and J. G. STEPHENSON (Rockwell International Corp.)

Aug. 1983

**MSC-20113** Vol. 7, No. 3, P. 307

Hole sizes deduced from pressure measurements. Measuring apparatus consists of pitot tube attached to water-filled manometer. Compartment tested is pressurized with air. Pitot probe placed at known distance from leak. Dynamic pressure of jet measured at that point and static pressure measured in compartment. Useful in situations in which small leaks are tolerable but large leaks are not.

**B83-10064**

**FLEXIBLE COUPLING FOR ANGLE TRANSDUCER**

R. A. MAYO (CALTECH)

Aug. 1983

**NPO-15412** Vol. 7, No. 3, P. 308

Flexure strips ensure parallelism between input and output shafts. Coupling essentially gimbal mounting that behaves as four-bar linkage. Creates remote phantom pivot point that remains stationary for small displacements of coupling.

**B83-10065**

**INSTRUMENTED PICK DETECTS COAL/ROCK INTERFACE**

T. WU (General Electric Co.) and J. W. ERKES (General Electric Co.)

Aug. 1983

**MFS-25753** Vol. 7, No. 3, P. 308

Instrumented pick installed on cutting drum of coal shearer for longwall mining measures cutting force with strain-gage-bridge load cell. Force signal transmitted to remote recorder. Transmitter located in base of pick assembly. Antenna located in shadow of rotating pick. Changes in characteristics of force signals from pick used to determine whether pick is cutting coal or rock.

**B83-10066**

**PORTABLE PALLET-WEIGHING APPARATUS**

R. M. DAY

Aug. 1983

**GSC-12789** Vol. 7, No. 3, P. 309

Portable apparatus intended for standard four-trunnion pallets readily adaptable to any large payload or other loads where shifting of cargo is to be avoided. Device lifts trunnion of pallet short distance above its resting place. Weight at trunnion applied to load cell. Similar units placed at all four trunnions.

**B83-10067**

**PROPOSED SHORT-THROAT SUPERSONIC NOZZLES**

W. R. WAGNER (Rockwell International Corp.) and G. H. RATEKIN (Rockwell International Corp.)

Aug. 1983

**MFS-19759** Vol. 7, No. 3, P. 310

Numerical procedure analyzes mach numbers along wall and in flow field, wall pressures, gas temperatures, and nozzle-throat discharge coefficients. Nozzles used in turbines, jet engines, magnetohydrodynamic systems, laser systems and other supersonic-flow devices.

**B83-10068**

**SIMPLIFIED MODELING OF TETRAHEDRAL TRUSSES**

A. LEONDIS (General Dynamics Corp.)

Aug. 1983

**LAR-12815** Vol. 7, No. 3, P. 312

Tetrahedral-lattice structure exhibits great complexity in mathematical analysis, and complexity quickly increases with number of elements. Solutions for static and dynamic behavior of structure obtained with model consisting of analogous structure with fewer repeating elements. Advantage of continuum models is analytic solutions can be obtained, either in closed form or in relatively-tractable Taylor series.

**B83-10069**

**IMPROVING A GUARDED HOTPLATE**

D. CHAFEY (Lockheed Missiles & Space Co.) and G. C. HENNESSEE (Lockheed Missiles & Space Co.)

Aug. 1983

**MSC-20447** Vol. 7, No. 3, P. 312

Modified outer guard ring heated more uniformly. Outer guard ring includes six compressible sheets of thin fibrous-ceramic paper that form thermal barrier to outward heat flow. Ceramic paper presses heating coils against ring allowing ring to be more uniformly heated.

**B83-10070**

**TASK BOARD TESTS MANIPULATOR PERFORMANCE**

J. W. HILL (SRI International)

Aug. 1983

**NPO-15150** Vol. 7, No. 3, P. 313

Task board constructed to facilitate time-and-motion studies for remote manipulators. Apparatus equipped with holes, objects of various shapes to be grasped and sensors with switches to indicate contact. Useful in industrial robots programmed to assemble parts.

**B83-10071**

**VORTEX LIFT AUGMENTATION BY SUCTION**

A. H. TAYLOR, L. R. JACKSON, and J. K. HUFFMAN

Aug. 1983

**LAR-12969** Vol. 7, No. 3, P. 314

Lift performance is improved on a 60 degrees swept Gothic wing. Vortex lift at moderate to high angles of attack on highly swept wings used to improve takeoff performance and maneuverability. New design proposed in which suction of propulsion system augments vortex. Turbofan placed at down stream end of leading-edge vortex system induces vortex to flow into inlet which delays onset of vortex breakdown.

**B83-10072**

**TIME-DOMAIN MODAL VIBRATION IDENTIFICATION**

S. R. IBRAHIM (Old Dominion University Research Foundation)

Aug. 1983

**LAR-12924** Vol. 7, No. 3, P. 314

Ibrahim Time-Domain modal vibration identification program (ITD) uses multiple free-decay responses of test structure directly in time domain to identify modal parameters of structure: natural frequencies, damping factors and damped mode shapes. ITD written in FORTRAN.

## 06 MECHANICS

**B83-10073**

### **THERMAL RADIATION MODEL RENODALIZATION**

D. J. RUSSELL (Rockwell International Corp.)

Aug. 1983

**MSC-20348**

**Vol. 7, No. 3, P. 314**

Thermal Radiation Model Renodalization program redefines thermal model nodal geometry subsequent to generation of radiation interchange data. Program readily used with TRASYS thermal radiation program and SINDA thermal analyzer program. Program written in FORTRAN V.

**B83-10074**

### **MONTE CARLO INVESTIGATION OF TRAJECTORIES**

A. B. GLASS (Computer Sciences Corp.)

Aug. 1983

**GSC-12705**

**Vol. 7, No. 3, P. 315**

Monte Carlo Investigation of Trajectory Operations and Requirements (MONITOR) program performs spacecraft mission maneuver simulations for craft mission maneuver simulations for geosynchronous single-maneuver, and comet encounter trajectories. Used primarily to study geosynchronous missions and model trajectories of satellites deployed by Space Shuttle. Program written in FORTRAN IV.

**B83-10075**

### **CODE SOLVES THREE-DIMENSIONAL NAVIER-STOKES EQUATIONS**

P. THOMAS (Lockheed Missiles and Space Co.)

Aug. 1983

**LAR-12962**

**Vol. 7, No. 3, P. 315**

Set of computer codes solves three-dimensional Navier-Stokes equations for flow over nonaxisymmetric nozzles. Codes compute internal and external viscous flowfield about isolated nozzle, so flow characteristics and performance of three-dimensional jet engine exhaust nozzles can be predicted. Programs written in FORTRAN IV and ASSEMBLER.

**B83-10076**

### **SHOCK FREE AIRFOIL CASCADES**

D. S. DULIKRAVICH (Universities Space Research Association)

Aug. 1983

**LEW-13842**

**Vol. 7, No. 3, P. 316**

The CAS22 computer program developed to provide for fast design and analysis of shock free airfoil cascades. CAS22 applicable to aerodynamic analysis and transonic shock free redesign of existing two-dimensional cascades of airfoils. Program is written in FORTRAN IV.

**B83-10077**

### **PREDICTING AIRCRAFT NOISE LEVELS**

B. J. CLARK

Aug. 1983

**LEW-13778**

**Vol. 7, No. 3, P. 316**

Computer program developed for predicting aircraft noise levels either in flight or in ground tests. Noise sources include fan inlet and exhaust jet flap (for powered lift), core (combustor), turbine and airframe. Program written in FORTRAN IV.

**B83-10078**

### **MINIMUM INDUCED DRAG OF NONPLANAR WINGS**

T. J. KU (Old Dominion University Research Foundation) and J. M. KUHLMAN (Old Dominion University Research Foundation)

Aug. 1983

**LAR-12925**

**Vol. 7, No. 3, P. 316**

DRG program incorporates numerical optimization technique for calculating bound-circulation distribution required for minimum induced drag of nonplanar wings. DRG written in FORTRAN IV.

**B83-10079**

### **WING SUBSONIC AERODYNAMIC PERFORMANCE ES-**

**TIMATES**

H. W. CARLSON (Kentrion International) and K. B. WALKLEY (Kentrion International)

Aug. 1983

**LAR-12987**

**Vol. 7, No. 3, P. 317**

Solution by iteration estimates performance of twisted and cambered wings of arbitrary planform. SUBAER based on linearized theory lifting-surface solution provides spanwise distribution of theoretical leading edge thrust, in addition to surface distribution of perturbation velocities. Program written in FORTRAN IV.

**B83-10080**

### **BOUNDARY-LAYER EQUATIONS FOR TWO-DIMENSIONAL AND AXISYMMETRIC FLOW**

J. E. HARRIS and D. K. BLANCHARD

Aug. 1983

**LAR-13015**

**Vol. 7, No. 3, P. 317**

In program coupled, iterative implicit finite-difference procedure solves system of equations for laminar transitional or turbulent boundary-layer flows. Program written in FORTRAN IV.

**B83-10081**

### **FAST GENERATION OF BOUNDARY-CONFORMING O-TYPE GRIDS**

D. S. DULIKRAVICH

Aug. 1983

**LEW-13818**

**Vol. 7, No. 3, P. 317**

Algorithm generates grids for arbitrary wing-body and axial turbomachinery geometries. GRID30 based on using analytic function to generate twodimensional grids on number of coaxial axisymmetric surfaces positioned between centerbody and outer radial boundary. Program written in FORTRAN IV.

**B83-10082**

### **CALCULATING THE VORTEX LIFT EFFECT OF CAMBERED WINGS**

C. E. LAN (University of Kansas Center for Research, Inc.) and J. F. CHANG (University of Kansas Center for Research, Inc.)

Aug. 1983

**LAR-12985**

**Vol. 7, No. 3, P. 318**

Computer program VORCAM calculates vortex-lift effect of cambered wings by suction analogy. Based on improved version of Woodward's chord plane aerodynamic panel method for subsonic and supersonic flow. Developed specifically for cambered wings exhibiting edge-separated vortex flow, including those with leading-edge vortex flaps. Program written in FORTRAN IV.

**B83-10168**

### **ELECTRONIC DILATOMETER**

C. R. STROOPE (Hughes Aircraft Co.), G. S. PLEWS (Hughes Aircraft Co.), and J. ERMILICH (Hughes Aircraft Co.)

Oct. 1983

**GSC-12738**

**Vol. 7, No. 4, P. 419**

Nonclamping micrometer measures small strains. Electronic dilatometer measures minute dimensional changes caused by moisture absorption in graphite/ epoxy composites. Instrument handles sample 6 inches (15 cm) long and has strain resolution of 0.1 micro-inch/inch (0.1 micron/meter). Possible to predict humidity-induced dimensional changes in items constructed of sample material.

**B83-10169**

### **TORQUE COMPENSATOR FOR MIRROR MOUNTINGS**

S. D. HOWE (Hughes Aircraft Co.)

Oct. 1983

**GSC-12742**

**Vol. 7, No. 4, P. 420**

Device nulls flexural distributions of pivotal torques. Magnetic compensator for flexing pivot torque consists of opposing fixed and movable magnet bars. Magnetic torque varies nonlinearly as function of angle of tilt of movable

bar. Positions of fixed magnets changed to improve magnetic torque linearity.

**B83-10170**  
**CONTROLLING HEAT-EXCHANGER OUTLET TEMPERATURE**

C. M. DANIELS (Rockwell International Corp.)  
Oct. 1983

**MFS-19667** Vol. 7, No. 4, P. 421  
Nearly constant temperature maintained regardless of fluid flow. Mixing heated and unheated fluids ensures constant temperature at outlet of heat exchanger. Main stream fluid heated, and bypass fluid unheated. Devised to maintain constant-temperature output under varying flow rates. Used with fluids other than liquid oxygen - water for example.

**B83-10171**  
**VIBRATION-ISOLATION BENCH FOR TESTING IN VACUUM**

J. C. DANKOWSKI (Hughes Aircraft Co.)  
Oct. 1983

**GSC-12753** Vol. 7, No. 4, P. 421  
Precise optical systems tested without contamination. Vibration isolator is one of three such units supporting cast-iron table. Table used to test optical systems in vacuum. Isolator made from commercially available components. Scaled-down version finds wider application in electron optics or electron-beam lithography.

**B83-10172**  
**ELECTRONIC FORCE GAGE FOR WELDERS**

J. W. BRADLEY (Honeywell, Inc.) and G. GATES (Honeywell, Inc.)

Oct. 1983  
**MFS-25798** Vol. 7, No. 4, P. 423

Welding force monitored in process. Electronic force gage uses strain gage on deformable member. Oscilloscope trace of welding force photographed and compared with standard trace during calibration and troubleshooting of resistance welding equipment. Adaptable to small scale resistance welding in electronics industry.

**B83-10173**  
**SWIRL DIFFUSER**

W. E. SIMON (Martin Marietta Corp.)  
Oct. 1983

**MSC-18996** Vol. 7, No. 4, P. 423  
Gas diffuser, based on swirling flow, dissipates incoming gas velocity in relatively short distance. Pinwheel nozzle welded to end of inlet pipe creates swirling flow. Diffuser essentially open pipe with pinwheel nozzle, pressure drop in diffuser almost same as open pipe. Applications include fuel burners in room inlets for heating and air-conditioning, and carburetors for internal-combustion engines.

**B83-10174**  
**LEAK TESTER FOR CRYOGENIC FLOWLINES**

G. D. MORTENSEN (Rockwell International Corp.), J. N. OLNEY (Rockwell International Corp.), and J. M. MARDESIC (Rockwell International Corp.)

Oct. 1983  
**MSC-20233** Vol. 7, No. 4, P. 425

Gas chromatography measures leakage into cavity surrounding joint under test. System surrounds joint being tested with sealed cavity. Presence of leakage gas in cavity monitored by gas chromatograph. Leakage rate found by multiplying relative leakage gas concentration by mass flow rate of purge as into cavity.

**B83-10175**  
**CALCULATING STATIC-SEAL LEAKAGE CORRELATION**

C. M. DANIELS (Rockwell International Corp.) and M. E. BURR (Rockwell International Corp.)

Oct. 1983  
**MFS-19674** Vol. 7, No. 4, P. 426

Operational leakage rates of various working fluids predicted from test data. Method converts leakage through fixed area flow passage from one set of fluid conditions to another. Correction factor improves correlation of measured engine static seal leak rate under test conditions with rate under operating conditions. Potential applications include extrapolating from test conditions to operating condition.

**B83-10176**  
**DIELECTRIC SCANNING LOCATES VOIDS IN GLASS FOAM**

P. M. GAMMELL (CALTECH)  
Oct. 1983

**NPO-15728** Vol. 7, No. 4, P. 426

Capacitive probes succeed where X-ray and ultrasonic equipment do not. Crossbar switching of pairs of conductors enables detection of dielectric inhomogeneities in selected small volume elements of slab of material. Large void in sample detected as low capacitance reading for volume element containing void. Applicable in nondestructive testing of other dielectric objects for internal defects that exhibit dielectric inhomogeneities.

**B83-10177**  
**EDDY-CURRENT DAMAGE TEST FOR CARBON COMPOSITES**

A. B. HAMILTON (Vought Corp.)  
Oct. 1983

**MSC-20358** Vol. 7, No. 4, P. 428

Nondestructive test method detects cracks in materials of low conductivity. Test setup includes eddycurrent unit with frequency of 2 to 20 MHz/ and storage oscilloscope. High frequency required to assure depth of penetration less than substrate thickness, to prevent thickness from influencing reading. Eddy-current analysis confirmed by visual inspection as damaged area was sectioned and evaluated.

**B83-10178**  
**MANOMETER MEASURES GAS FLOW**

J. J. ROWLETTE (CALTECH)  
Oct. 1983

**NPO-15686** Vol. 7, No. 4, P. 428

Simple apparatus measures time required for gas to displace known volume of water. Apparatus determines amount of gas generated in lead/acid cell during charging by measuring time required for gas to displace measured volume of water between marks in slanted manometer.

**B83-10179**  
**J-CHANNEL LOCKS POTTING TO COMPRESSION PANEL**

D. M. ROYSTER and W. A. SHEARIN JR.  
Oct. 1983

**LAR-12913** Vol. 7, No. 4, P. 429

Panel ends supported to prevent edge failure during testing. J-Channels attached to panel ends form mechanical lock with potting compound during elevated temperature tests. Not needed during room-temperature tests.

**B83-10180**  
**MEASURING SURFACE-SHEAR STRESS IN A WIND TUNNEL**

F. LEMOS and H. HIGUCHI (Dynamics Technology, Inc.)  
Oct. 1983 See Also NASA TM-78531(N79-14330/NSP)

**ARC-11384** Vol. 7, No. 4, P. 430

Two-wire skin friction gage gives both magnitude and direction of mean and fluctuating stresses. Heated wires lie at surface of gage, measure airflow by cooling effect. Wires perpendicular to each other to measure flow direction as well as magnitude. Used successfully in various turbulent flow fields, including separating three-dimensional boundary layer over cone at high angle of incidence.

**B83-10181**  
**FRACTURE STRENGTH OF SILICON SOLAR CELLS**

C. P. CHEN (CALTECH)

## 06 MECHANICS

Oct. 1983

**NPO-15187**

**Vol. 7, No. 4, P. 431**

Tests during processing show way to reduce breakage and increase yield. Silicon wafer twisted by four equally spaced dowel pins, two pushing up and two pushing down. Uniform shear stress found along line 45 degrees from axes of two load pairs. Test helping to develop reliable information on nature and source of flows causing cell fracture.

**B83-10182**

**ESTIMATING DESIGN LOADS IN COUPLED VIBRATING STRUCTURES**

M. R. TRUBERT (CALTECH), M. A. SALAMA (CALTECH), and R. M. BAMFORD (CALTECH)

Oct. 1983 See Also JPL Publication 79-2 (N79-20177/NSP)

**NPO-14872**

**Vol. 7, No. 4, P. 432**

Approximate spectral analysis faster and less expensive than transient analysis. Method of vibration analysis combines separate modes of spacecraft and launcher to determine approximate conditions for resonance. Useful for analysis of any complex structure made up of substructures not coupled too closely; however important to note, method includes effect of dynamic impedance between launcher and payload.

**B83-10183**

**MULTIVALUED-VELOCITY-FIELD MODEL OF TURBULENCE**

M. A. ZAK (CALTECH)

Oct. 1983

**NPO-15748**

**Vol. 7, No. 4, P. 432**

Report presents multi-valued-velocity model used in calculations of turbulence formation. Developed as part of continuing study of turbulent fluid motion, model expected to evolve into comprehensive mathematical tool to explain origin and effects of turbulence. Model has great theoretical and practical value in such fields as aerodynamics, meteorology, and combustion.

**B83-10184**

**METHODS FOR ESTIMATING PAYLOAD/VEHICLE DESIGN LOADS**

J. C. CHEN (Caltech), J. A. GARBA (Caltech), M. A. SALAMA (Caltech), and M. R. TRUBERT (Caltech)

Oct. 1983

**NPO-15550**

**Vol. 7, No. 4, P. 433**

Several methods compared with respect to accuracy, design conservatism, and cost. Objective of survey: reduce time and expense of load calculation by selecting approximate method having sufficient accuracy for problem at hand. Methods generally applicable to dynamic load analysis in other aerospace and other vehicle/payload systems.

**B83-10185**

**DISSOCIATED AIRFLOW EFFECTS DURING PLASMA-ARC TESTING**

B. A. MILLER (Rockwell International Corp.) and J. A. BERTANI (Rockwell International Corp.)

Oct. 1983

**MSC-20522**

**Vol. 7, No. 4, P. 434**

Program computes heating rates and surface friction effects. COLDARC predicts heating rate and surface friction on test article during plasmaarc testing. Uses simplified frozen-flow model to represent dissociated airflow and predict heat flux and surface friction, including effects of retarded atomic recombination from test facility data. COLDARC written in FORTRAN IV.

**B83-10186**

**SOLUTIONS OF TRANSONIC FLOW IN TURBOMACHINES**

S. STAHARA (Nielson Engineering & Research, Inc.), J. ELLIOTT (Nielson Engineering & Research, Inc.), and J. SPRETTNER (Nielson Engineering & Research, Inc.)

Oct. 1983

**LEW-13896**

**Vol. 7, No. 4, P. 434**

Accurate approximation obtained using perturbation techniques. Perturbation procedures determine highly accurate approximations to families of nonlinear solutions either continuous or discontinuous and represent variations in some arbitrary parameter. Program written in FORTRAN IV.

**B83-10187**

**TRANSONIC, AXISYMMETRIC FLOW OVER NOZZLE AFTERBODIES WITH SUPERSONIC JET EXHAUSTS**

R. G. WILMOTH

Oct. 1983

**LAR-12957**

**Vol. 7, No. 4, P. 434**

Predictions require less computation than Navier-Stokes solutions. RAXJET computer program predicts transonic, axisymmetric flow over nozzle afterbodies with supersonic jet exhausts and includes effects of boundary layer displacement, separation, jet entrainment, and inviscid jet plume blockage. RAXJET written in FORTRAN IV.

**B83-10188**

**COMPRESSIBLE STABILITY ANALYSIS CODE FOR TRANSITION PREDICTION IN THREE DIMENSIONAL BOUNDARY LAYERS.**

M. R. MALIK (High Technology Corp.)

Oct. 1983

**LAR-13042**

**Vol. 7, No. 4, P. 435**

COSAL employs finite-difference method to solve compressible stability equations in original form. Code includes two eigenvalue search procedures. Global procedure provided for use when no initial guess available. Fast local eigenvalue search procedure provided for use when good initial guess available. COSAL written in FORTRAN IV.

**B83-10189**

**STEADY, NONROTATING, BLADE-TO-BLADE POTENTIAL TRANSONIC CASCADE FLOW ANALYSIS CODE**

D. S. DULIKRAVICH

Oct. 1983

**LEW-13854**

**Vol. 7, No. 4, P. 436**

CAS2D computer program numerically solves artificially time-dependent form of actual full potential equation, providing steady, nonrotating, blade-to-blade potential transonic cascade flow analysis code. CAS2D written in FORTRAN IV.

**B83-10190**

**PANEL CODE FOR PLANAR CASCADES**

E. R. MCFARLAND

Oct. 1983

**LEW-13862**

**Vol. 7, No. 4, P. 436**

Plane cascade flow solved using improved surface-singularity methods. Current external aerodynamic integral-equation techniques adapted for use in internal flow calculation. Inherent computational speed and flexibility of integral equation solutions make them useful for design calculations.

**B83-10191**

**DESIGN OF MULTISTAGE AXIAL-FLOW COMPRESSORS**

J. E. CROUSE and W. T. GORRELL (U.S. Army Aviation Research and Development Command)

Oct. 1983

**LEW-13505**

**Vol. 7, No. 4, P. 436**

Program developed for computing aerodynamic design of multistage axialflow compressor and associated blading geometry input for internal flow analysis. Aerodynamic solution gives velocity diagrams on selected streamlines of revolution at blade row edges. Program written in FORTRAN IV.

**B83-10192**

**EXTENDED VORTEX LATTICE METHOD**

J. E. LAMAR and H. E. HERBERT (Computer Sciences Corp.)

Oct. 1983

**LAR-13039**

**Vol. 7, No. 4, P. 437**

Extended NASA Langley Vortex Lattice Method computer program VLM, estimates subsonic aerodynamic characteristics of up to four complex planforms. Planforms include wings with variable-sweep outer panels, wings with several changes in dihedral angle across span, wings with winglets, and wing (or wings) in conjunctions with tail and/or canard. VLM written in FORTRAN IV.

**B83-10193**

**SUBCRITICAL WING DESIGN CODE**

J. M. KUHLMAN (Old Dominion University Research Foundation) and J. Y. SHU (Old Dominion University Research Foundation)

Oct. 1983

**LAR-12959**

**Vol. 7, No. 4, P. 437**

QUICK Interactive Graphics Analysis program, QUIAGA, displays aircraft QUICK-geometry data to aid in detection and analysis of errors. Program generates completely-analytical aircraft geometry description for use by finite difference flow codes. QUIAGA written in FORTRAN IV.

**B83-10194**

**INTERACTIVE GRAPHICS ANALYSIS FOR AIRCRAFT DESIGN**

J. C. TOWNSEND

Oct. 1983

**LAR-12951**

**Vol. 7, No. 4, P. 437**

Program uses higher-order far field drag minimization. Computer program WDES WDEM preliminary aerodynamic design tool for one or two interacting, subsonic lifting surfaces. Subcritical wing design code employs higher-order far-field drag minimization technique. Linearized aerodynamic theory used. Program written in FORTRAN IV.

**B83-10195**

**OFF-DESIGN TURBINE MODELING**

G. L. CONVERSE (General Electric Co.)

Oct. 1983

**LEW-13674**

**Vol. 7, No. 4, P. 438**

Off-design efficiency and flow function obtained from design point input data. Computer program PART improved method of representing turbine component when performing calculations of off-design-point data to total efficiency over range of pressure ratios and speeds specified by user. PART written in FORTRAN IV.

**B83-10196**

**AXIAL COMPRESSOR DESIGN AND ANALYSIS**

J. G. WILLIAM and R. M. HEARSAY (University of Dayton)

Oct. 1983

**LEW-13488**

**Vol. 7, No. 4, P. 438**

Program yields blade configurations and aerodynamic flow fields. Program consists of three sections -- two blade design sections and aerodynamic section. Program structured that one section used alone, or aerodynamic section used in conjunction with either or both of blading sections. Program written in FORTRAN IV.

**B83-10373**

**MEMBRANE SWITCHES CHECK SEAL PRESSURE**

P. J. HODGETTS (Rockwell International Corp.), F. H. STUCKENBERG (Rockwell International Corp.), and E. T. MORRISSEY (Rockwell International Corp.)

Apr. 1984

**MSC-20468**

**Vol. 8, No. 1, P. 75**

Array of flexible membrane switches used to indicate closure of seal. Switch membrane responds to pressure exerted by rigid surface on compliant sealing medium and provides switch contacts monitored electronically. Membrane switches connected in series and placed under seal. When all switches are closed lamp or LED lights up,

indicating requisite seal pressure has been realized at all switch positions. Principle used to ensure integrity of seals on refrigerator and oven doors, weatherstripping, hatches, spacecraft, airplanes, and submarines.

**B83-10374**

**EDDY-CURRENT INSPECTION OF NARROW METAL TUBES**

H. H. AMBROSE (Rockwell International Corp.), R. E. KLEINT (Rockwell International Corp.), and K. E. KIRKHAM (Rockwell International Corp.)

Apr. 1984

**MFS-19742**

**Vol. 8, No. 1, P. 76**

Inspection technique for narrow-bore metal tubing involves use of small internal eddy-current probe. Probe consists of thin copper wire wrapped on bobbin. Probe small enough to pass through bends in tube being measured. Technique useful for strain measurements where operating conditions or inaccessibility prevent use of such conventional methods as X-ray diffraction, electrical-resistance measurements, strain gages, or holography.

**B83-10375**

**ACOUSTIC DESIGN IMPROVES COMPOSITE IMPACT RESISTANCE**

J. S. HEYMAN

Apr. 1984

**LAR-12887**

**Vol. 8, No. 1, P. 76**

Improved tolerance of composites to impact damage achieved using acoustic response model to characterize dynamics of damage mechanism. Model based on assumption that in addition to classical mechanical properties, damage mechanism depends on acoustic properties of composite material. Use of model results in more-impact-resistant composite structure.

**B83-10376**

**CRYOGENIC PRESSURE SEAL FOR WIRES**

J. J. CIANA (Rockwell International Corp.)

Apr. 1984

**MFS-19668**

**Vol. 8, No. 1, P. 77**

High-pressure-seal formed by forcing polyurethane into space surrounding wire or cable in special fitting. Wire or cable routed through fitting then through a tightly fitting cap. Wire insulation left intact. Cap filled with sealant and forced onto the fitting; this pushes sealant into fitting so it seals wire or cable in fitting as well as in cap.

**B83-10377**

**SIMULATING ATMOSPHERIC TURBULENCE**

F. B. TATOM (Engineering Analysis, Inc.) and S. R. SMITH (Engineering Analysis, Inc.)

Apr. 1984

**MFS-25850**

**Vol. 8, No. 1, P. 78**

Dimensionless time series for gusts and gradients calculated with model. Single-sided one-dimensional spectra obtained from Fourier analysis of simulated vertical gust. Each of four plots represents spectrum in one of four altitude bands ranging from 0 to 10 km. Model differs from most models; is nondimensional for greater generality and uses spectra with finite wave number limits. Developed to predict effects of atmospheric turbulence in horizontal and near-horizontal flight also applicable to commercial aviation.

**B83-10378**

**ATTACHING STRAIN GAGES TO COMPOSITE MATERIALS**

B. PENN, J. M. CLEMONS, F. LEDBETTER III, and W. WHITE

Apr. 1984

**MFS-25867**

**Vol. 8, No. 1, P. 78**

Polyurethane adhesive bonds strain gages reliably to graphite/epoxy composites. Adhesive easy to apply, used over wide temperature range (ambient to cryogenic), and applied in short time. Tests on gages bonded to composite with adhesive demonstrated reliability of attachment.

## 06 MECHANICS

**B83-10379**

### **SUPPRESSING TRANSIENT SIDE LOADS IN SUPER-SONIC NOZZLES**

W. R. WAGNER (Rockwell International Corp)

Apr. 1984

**MFS-19769**

**Vol. 8, No. 1, P. 79**

Fins added to nozzle wall. Fins protrude from rocket nozzle wall at equal intervals about circumference. Inhibit circumferential growth of local flow separations, reducing sideways vibration of nozzle. Transient-suppressing fins helpful in rocket nozzles, jet engines, gas turbines, laser nozzles, flow diffusers, flow separators and other devices with supersonic flows.

**B83-10380**

### **TOOL RELEASES OPTICAL ELEMENTS FROM SPRING BRACKETS**

J. S. GUM

Apr. 1984

**GSC-12794**

**Vol. 8, No. 1, P. 79**

Threaded hooks retract bracket arms holding element. Tool uses three hooks with threaded shanks mounted in ring-shaped holder to pull on tabs to release optical element. One person can easily insert or remove optical element (such as prism or lens) from spring holder or bracket with minimal risk of damage.

**B83-10381**

### **STABILITY TEST FOR TRANSIENT-TEMPERATURE CALCULATIONS**

W. CAMPBELL

Apr. 1984

**MFS-25803**

**Vol. 8, No. 1, P. 80**

Graphical test helps assure numerical stability of calculations of transient temperature or diffusion in composite medium. Rectangular grid forms basis of two-dimensional finite-difference model for heat conduction or other diffusion like phenomena. Model enables calculation of transient heat transfer among up to four different materials that meet at grid point.

**B83-10382**

### **LIQUID-NITROGEN TEST FOR BLOCKED TUBES**

W. R. WAGNER (Rockwell International Corp.)

Apr. 1984

**MFS-19762**

**Vol. 8, No. 1, P. 81**

Nondestructive test identifies obstructed tube in array of parallel tubes. Trickle of liquid nitrogen allowed to flow through tube array until array accumulates substantial formation of frost from moisture in air. Flow stopped and warm air introduced into inlet manifold to heat tubes in array. Tubes still frosted after others defrosted identified as obstructed tubes. Applications include inspection of flow systems having parallel legs.

**B83-10383**

### **SHEAR-PANEL TEST FIXTURE ELIMINATES CORNER STRESSES**

J. J. KISS, G. L. FARLEY (Army Aviation Research and Development Command), and D. J. BAKER (Army Aviation Research and Development Command)

Apr. 1984

**LAR-12930**

**Vol. 8, No. 1, P. 82**

New design eliminates corner stresses while maintaining uniform stress across panel. Shear panel test fixture includes eight frames and eight corner pins. Fixture assembled in two halves with shear panel sandwiched in between. Results generated from this fixture will result in good data base for design of efficient aircraft structures and other applications.

**B83-10384**

### **HEAT-PIPE THERMAL SWITCH**

S. OLLENDORF

Apr. 1984

**GSC-12644**

**Vol. 8, No. 1, P. 83**

New design isolates components from vibrations. Heat-pipe thermal switch controls temperature of heat source. Ball-and-socket guide rods and bellows allow relative motion of source and its heat sink and protect source from vibrations. Designed for cooling vibration-sensitive electronic components.

**B83-10385**

### **FLOW-STRAIGHTENER SLEEVE FOR PUMP VALVE**

J. TOLPEN (Rockwell International Corp.)

Apr. 1984

**MFS-19781**

**Vol. 8, No. 1, P. 84**

Flow-straightening sleeve contains vanes in modified honeycomb pattern. Each vane curved fluid-dynamic wing that helps straighten and smooth out flow of fluid passing over it. Sleeve performs more reliably and quietly, possibility of damage to internal valve parts greatly reduced, valve life expectancy increased and time between overhauls extended.

**B83-10386**

### **ISOLATING SUPPORTS FOR X-RAY MIRRORS**

L. M. COHEN (Smithsonian Astrophysical Observatory)

Apr. 1984

**MFS-25904**

**Vol. 8, No. 1, P. 85**

Simple concept reduces effects of gravity, temperature and magnetism. Single circumferential ring supports fused-quartz mirror in high-resolution x-ray telescope. Adaptable to such terrestrial instruments as imaging devices and spectrosopes.

**B83-10387**

### **ELECTRONICALLY-SCANNED PRESSURE SENSORS**

C. F. COE, G. T. PARRA, and R. C. KAUFFMAN

Apr. 1984

**ARC-11361**

**Vol. 8, No. 1, P. 86**

Sensors not pneumatically switched. Electronic pressure-transducer scanning system constructed in modular form. Pressure transducer modules and analog to digital converter module small enough to fit within cavities of average-sized wind-tunnel models. All switching done electronically. Temperature controlled environment maintained within sensor modules so accuracy maintained while ambient temperature varies.

**B83-10388**

### **CRYSTAL MICROBALANCE MONITORS RELATIVE HUMIDITY**

L. C. YANG (CALTECH)

Apr. 1984

**NPO-15493**

**Vol. 8, No. 1, P. 87**

Sensor monitors water evaporation in industrial drying processes. Measured adsorption isotherm for instrument essentially linear over entire range of relative humidity. Testing at each temperature setting less than half hour for full relative-humidity range, with estimated frequency response time less than 10 seconds. Used to measure relative humidity of ambient atmosphere near drying paper, food textile fabrics and pulp to optimize water-drying portion of processing cycle.

**B83-10389**

### **SURFACE-MOISTURE MONITORING TECHNIQUE**

L. C. YANG (CALTECH)

Apr. 1984

**NPO-15494**

**Vol. 8, No. 1, P. 88**

Technique monitors drying of continuous sheets of thin material. Ribbon sensing element samples moisture content of web material during each rotation of roller. Change in resistivity of thermally and electrically conductive ribbon is parameter used to measure web moisture; measurements insensitive to ribbon contact pressure. Application in industrial production of sheet materials such as paper and fabric.

**B83-10390****LOCOMOTIVE TRUCK DYNAMICS**

R. L. BERRY (Martin Marietta Corp.) and F. E. BARONE (Martin Marietta Corp.)

Apr. 1984 See Also NASA CR-81-577 (N82-28224/NSP)

**MFS-25872** Vol. 8, No. 1, P. 89

Commonly-used locomotive trucks tested to study and improve ride safety. Federal Railroad Administration and National Aeronautics and Space Administration jointly initiated program to study locomotive truck dynamics to improve operation safety. Final report summarizes program and truck and component tests.

**B83-10391****RADIAL-CASCADE ANALYSIS**

S. Y. MENG (Rockwell International Corp.)

Apr. 1984

**MFS-19752** Vol. 8, No. 1, P. 89

Conformal mapping transforms radial cascade to axial cascade. Report describes analysis of pressure distributions on radial diffuser geometries within Space Shuttle main and preburner pumps. Analysis uses modified version of Douglas-Neuman (D-N) procedure for two-dimensional axial cascades.

**B83-10392****CRASH SIMULATION AND NONLINEAR STRUCTURAL ANALYSIS**

M. P. KAMAT (Virginia Polytechnic Institute and State University)

Apr. 1984

**LAR-12926; LAR-12927** Vol. 8, No. 1, P. 90

Behavior of structures composed of trusses, frames and membranes modeled. Crash simulation analysis useful in developing understanding of multifaceted relationship between complex structural configuration, such as aircraft, and response during crash. CDC version written in FORTRAN IV.

**B83-10393****PANEL ANALYSIS AND SIZING CODE**

M. S. ANDERSON, W. J. STROUD, B. J. DURLING, T. R. RAU, K. W. HENNESSY, W. H. GREENE, and C. G. LOTT (Kentron International, Inc.)

Apr. 1984

**LAR-13004; LAR-13164** Vol. 8, No. 1, P. 90

Program valuable in analyzing and sizing filamentary composite panels. Panel Analysis and Sizing code (PASCO) for buckling and vibration analysis and sizing of prismatic structure having arbitrary cross section primarily intended for analyzing and sizing stiffened panels made of laminated orthotropic materials. PASCO written in FORTRAN IV.

**B83-10394****QUICK INTERACTIVE GRAPHICS ANALYSIS**

J. C. TOWNSEND

Apr. 1984

**LAR-12952** Vol. 8, No. 1, P. 91

Cross-section and body-line plots generated for error detection and analysis. FORTRAN 77 version of QUICK Interactive Graphics Analysis program QUIAGA, performs same operations as FORTRAN IV counterpart. QUIAGA displays aircraft QUICK geometry data to aid in detection and analysis of errors. QUICK-geometry data used to generate completely analytical aircraft geometry description for finite difference flow codes. QUIAGA program written in FORTRAN 77.

**B83-10395****TRANSONIC AIRFOIL ANALYSIS**

T. L. HOLST, F. C. DOUGHERTY, K. L. GUNDY (Informatics, Inc.), S. D. THOMAS (Informatics, Inc.), J. FRICK (Informatics, Inc.), A. FERNQUIST (Informatics, Inc.), and J. ALBERT (University of Santa Clara)

Apr. 1984

**ARC-11436** Vol. 8, No. 1, P. 91

Program uses fast iteration scheme for solving transonic flow field around arbitrary airfoils. Transonic Airfoil Analysis Computer Code, TAIR, employs fast, fully implicit algorithm to solve conservative full-potential equation for steady transonic flow field about arbitrary airfoil immersed in subsonic free stream. TAIR written in FORTRAN IV.

**B83-10396****GENERAL AVIATION SYNTHESIS PROGRAM**

T. GALLOWAY, E. SCHAIRER, J. BOWLES, and M. WATERS

Apr. 1984

**ARC-11434** Vol. 8, No. 1, P. 91

Program performs preliminary design of fixed-wing aircraft. Emphasis placed on fixed wing aircraft with propulsion systems varying from single piston engine with fixed-pitch propeller through twin turbo-prop/turbofan systems used in business or transport aircraft. GASP written in FORTRAN IV.

**B83-10397****MONITORING THE THICKNESS OF COAL-CONVERSION SLAG**

J. V. WALSH (CALTECH)

Apr. 1984

**NPO-15371** Vol. 8, No. 1, P. 92

Technique adapts analogous ocean-floor-mapping technology. Existing ocean floor acoustic technology adapted for real-time monitoring of thickness and viscosity of flowing slag in coal-conversion processing.

**B83-10398****MEASURING COATING THICKNESS**

A. SCHAFFER (Honeywell, Inc.) and D. GATES (Honeywell, Inc.)

Apr. 1984

**MFS-25633** Vol. 8, No. 1, P. 92

Gage measures coating thickness in holes. Gage for quickly determining coating thickness in holes on printed circuit board also used to size small holes in other applications.

**B83-10399****SELF-RIGHTING OBJECTS**

J. D. BURKE (CALTECH)

Apr. 1984

**NPO-15023** Vol. 8, No. 1, P. 92

Book-shaped object always springs open with 'pages' upward. Technique devised for righting small spacecraft after landing applied terrestrially in transmitters for rescue beacons.

**B83-10400****PREDICTING THERMAL CONDUCTIVITY**

B. PENN, F. LEDBETTER III, and J. CLEMENS

Apr. 1984

**MFS-25732** Vol. 8, No. 1, P. 93

Empirical equation predicts thermal conductivity of composite insulators consisting of cellular, granular or fibrous material embedded in matrix of solid viscoelastic material. Application in designing custom insulators for particular environments.

**B83-10401****PASSIVE MODULE FOR CRYOGENIC REFRIGERATION**

W. BROOKS and P. KITTEL (National Research Council)

Apr. 1984

**ARC-11263** Vol. 8, No. 1, P. 93

Refrigeration module with no moving parts attaches to cold plate of cryostat to reduce temperature. Module includes evaporation chamber, condenser and absorption pump.

**B83-10402****DETERMINING AIRCRAFT ALTITUDE**

J. J. LORRE (CALTECH)

## 06 MECHANICS

Apr. 1984

**NPO-15386**

**Vol. 8, No. 1, P. 93**

Altitude of aircraft determined rapidly from comparison of digital pictures of ground taken at different times or with different exposure times.

**B83-10403**

**DETERMINING FROST DEPTH AND DENSITY**

F. HUNEDI

Apr. 1984

**MFS-25754**

**Vol. 8, No. 1, P. 93**

Quick determination of frost depth and density obtained without using cumbersome tools or calculations.

**B83-10404**

**REMOTELY-ADJUSTABLE PRESSURE-CONTROL VALVE**

R. B. MORROW (CALTECH)

Apr. 1984

**NPO-15693**

**Vol. 8, No. 1, P. 93**

Hydraulic valve designed for controlling high-pressure fluid stream with low-pressure gas for fluid includes free-floating cylindrical control piston.

**B83-10405**

**RAIN AND DEW DETECTOR**

E. G. LAUE (CALTECH)

Apr. 1984

**NPO-15370**

**Vol. 8, No. 1, P. 93**

Multifinger transducer actuates simple circuit that sets off alarm when moisture bridges fingers.

**B83-10406**

**MODIFIED OSCILLOGRAPH FOR IMPACTING COMPOSITE MATERIALS**

B. PENN, F. LEDBETTER III, J. M. CLEMONS, J. DANIELS, and W. WHITE

Apr. 1984

**MFS-25901**

**Vol. 8, No. 1, P. 94**

Commercial oscillograph imparts impact energy to elastomeric materials modified to perform same function on composites.

**B83-10602**

**LIQUID-DROPLET RADIATIVE COOLER**

K. K. KNAPP (Astro Research Corp.)

Nov. 1984

**MFS-25890**

**Vol. 8, No. 2, P. 225**

Large-area, low-mass radiative cooler applicable to industrial processes requiring non-contacting cooling of process fluids. Droplet-stream radiators are used to radiate away waste heat. Extensive development required to produce practical system for terrestrial use. Effects of gravity and atmosphere are to be evaluated.

**B83-10603**

**MINIATURE AIRFLOW SENSOR**

D. D. KERSHNER

Nov. 1984

**LAR-13065**

**Vol. 8, No. 2, P. 226**

Miniature flow-angle and airspeed sensor quickly mounted on light aircraft wing with two-sided tape since conventional sensors are restricted to large aircraft. Sensor operates as free-trailing wind vane self-aligning in airstream through two independent axes. Vane attached to wing surface through hollow mounting boom that fits on mounting plate attached to wing with two-sided neoprene-foam tape. Method shown strong enough for loads of low-speed flight.

**B83-10604**

**AUTOMATED MERCURY DILATOMETER**

S. D. HONG (CALTECH) and V. H. CULLER (CALTECH)

Nov. 1984

**NPO-14884**

**Vol. 8, No. 2, P. 227**

Task of reading and recording indications of mercury dilatometer simplified by automatic system. Volume change of sample under test converted into electrical signal. Device

modified by addition of resistance wire to mercury column. Height of column read indirectly by measuring resistance between terminals. Signal suitable for strip-chart recording or other processing.

**B83-10605**

**WATERPROOF RAISED FLOOR MAKES UTILITY LINES ACCESSIBLE**

M. M. COHEN

Nov. 1984

**ARC-11363**

**Vol. 8, No. 2, P. 228**

Floor for laboratories, hospitals and factories waterproof yet allows access to subfloor utilities. Elevated access floor system designed for installations with multitude of diverse utility systems routed under and up through floor and requirement of separation of potentially conflicting utility services. Floor covered by continuous sheet of heat resealable vinyl. Floor system cut open when changes are made in utility lines and ducts. After modifications, floor covering resealed to protect subfloor utilities from spills and leaks.

**B83-10606**

**IN SITU MEASUREMENT OF GROUND-SURFACE FLOW RESISTIVITY**

A. J. ZUCKERWAR

Nov. 1984

**LAR-13053**

**Vol. 8, No. 2, P. 229**

New instrument allows in situ measurement of flow resistivity on Earth's ground surface. Noninvasive instrument includes specimen holder inserted into ground. Flow resistivity measured by monitoring compressed air passing through flow-meters; pressure gages record pressure at ground surface. Specimen holder with knife-edged inner and outer cylinders easily driven into ground. Air-stream used in measuring flow resistivity of ground enters through quick-connect fitting and exits through screen and venthole.

**B83-10607**

**RADIALLY-GRADUATED TURBINE-TEMPERATURE PROFILE**

W. R. WAGNER (Rockwell International Corp.), F. P. NITZ (Rockwell International Corp.), and M. L. STRANGELAND (Rockwell International Corp.)

Nov. 1984

**MFS-19831**

**Vol. 8, No. 2, P. 231**

Proposed scheme to change temperature distribution in gas-turbine flame increases radially instead of remaining spatially uniform offers important advantages. Radially increasing temperature allows higher mean gas temperature, greater power output, higher rotational speed and longer life for blades. Principle suitable for axial-flow gas turbine directly in line with cylindrical combustor. Included in category many rocket, aircraft, stationary, and shipboard turbines.

**B83-10608**

**LONG HEAT PIPE TRANSPORTS 2.6 KW**

D. M. ERNST (Thermacore, Inc.), E. H. DUBBLE (Thermacore, Inc.), and R. L. COPENHAVER (Thermacore, Inc.)

Nov. 1984

**NPO-16017**

**Vol. 8, No. 2, P. 231**

High-capacity heat pipe employs slender artery-and-wick structure. Ribbon of stainless steel screen wrapped around copper mandrel in conical copper forming tool. Outside edge of wrapped screen welded to layer on which it rests. Long heat pipe transports thermal energy at rate of 2,600 watts at operating temperature of 923 K.

**B83-10609**

**IDENTIFYING BOUNDARY-LAYER TRANSITIONS ON AIRCRAFT SKIN**

B. J. HOLMES, C. C. CROOM, W. C. KELLIHER, and C. J. OBARA (Kentron International, Inc.)

Nov. 1984

**LAR-13089**

**Vol. 8, No. 2, P. 232**

Sublimating chemicals offer accurate, low-cost way of indicating laminar-to-turbulent flow transitions on surfaces of aircraft. Aerodynamic surfaces coated with thin film of such volatile chemical solids as naphthalene, diphenyl, acenaphthene, or fluorene. Film sublimates rapidly because of high local shear stress and heat transfer in boundary layer. Coating appears white in regions where chemical remained on surface indicating laminar flow; regions where chemical disappeared indicate turbulent flow.

**B83-10610**  
**INTEGRATED TACTILE SENSOR FOR ROBOTS**  
 M. H. RAIBERT (CALTECH) and R. ESKENAZI (CALTECH)  
 Nov. 1984  
**NPO-15094** Vol. 8, No. 2, P. 233

Proposed large-scale integrated (LSI) circuit gives robots, partshandling machines, and remote-control devices sense of touch. LSI circuits, placed on contact surfaces of manipulators combine functions of transduction, computing and communicating. Beneath layer of pressure sensitive rubber, resistivity of which changes with pressure, electrodes furnish pressure-dependent signal to computation elements. Electrodes and computation elements contained in silicon integrated-circuit wafer.

**B83-10611**  
**CONTINUOUS-READING CRYOGENIC LEVEL SENSOR**  
 F. E. BARONE (Martin Marietta Corp.), E. FOX (Martin Marietta Corp.), and S. MACUMBER (Martin Marietta Corp.)  
 Nov. 1984  
**MFS-25873** Vol. 8, No. 2, P. 234

Two pressure transducers used in system for measuring amount of cryogenic liquid in tank. System provides continuous measurements accurate within 0.03 percent. Sensors determine pressure in liquid and vapor in tank. Microprocessor uses pressure difference to compute mass of cryogenic liquid in tank. New system allows continuous sensing; unaffected by localized variations in composition and density as are capacitance-sensing schemes.

**B83-10612**  
**GENERAL-PURPOSE ICOSAHEDRAL STRUCTURE**  
 J. EVANS  
 Nov. 1984  
**GSC-12854** Vol. 8, No. 2, P. 235

Scheme based on geodesic sphere approximated by regular icosahedron. Structure rigid and lightweight. Allows access to all subsystems and equipment from outside. Regular icosahedron constructed from triangular panels. Five panels meeting at each corner all rigidly attached to fivesided adapter. Strengthened version useful on Earth for rapidly-erectable temporary shelters, industrial structures, or playground equipment.

**B83-10613**  
**LOW-THERMAL-RESISTANCE BASEPLATE MOUNTING**  
 W. T. PERREAULT (Martin Marietta Corp.)  
 Nov. 1984  
**MFS-25908** Vol. 8, No. 2, P. 236

Low-thermal-resistance mounting achieved by preloading baseplate to slight convexity with screws threaded through beam. As mounting bolts around edge of base-plate tightened, baseplate and cold plate contact first in center, with region of intimate contact spreading outward as bolts tightened.

**B83-10614**  
**TEMPERATURE-AVERAGING THERMAL PROBE**  
 L. F. KALIL and V. REINHARDT  
 Nov. 1984  
**GSC-12795** Vol. 8, No. 2, P. 236

Temperature-averaging thermal probe measures long-term temperature fluctuations in fluid environment. Consists of temperature probe embedded inside thermally massive material. Probe measurements used to estimate powerplant

heating and cooling loads, map temperature profiles, and calibrate more-sensitive temperature probes.

**B83-10615**  
**AUTOCOVARANCE COMPUTER**  
 J. F. MEYERS and T. E. HEPNER (U.S. Army Aviation Research and Development Command)  
 Nov. 1984  
**LAR-12968** Vol. 8, No. 2, P. 237

Laser-velocimeter covariance processor calculates autocovariance and cross-covariance functions for turbulent flow field, based on Poisson-sampled measurements in time from laser velocimeter. Hardware implementation of correlation technique to laser velocimeter flow-field diagnostic system fast enough for online production applications.

**B83-10616**  
**PREDICTING NOISE IN COMPLEX AIRCRAFT STRUCTURES**  
 J. F. UNRUH (Southwest Research Institute) and D. C. SCHEIDT (Southwest Research Institute)  
 Nov. 1984 See Also NASA CR-3427 (N81-25766/NSP)  
**LAR-13032** Vol. 8, No. 2, P. 238

Technique combines theoretical and empirical aspects of structural components. Experimental and analytical program produces test and analysis procedures for predicting extent of noise generated in aircraft. Purpose of program to develop ways of screening candidate materials considered for noise control and establish test procedures for verifying choice of particular control measure.

**B83-10617**  
**COOLDOWN STRATEGY FOR CRYOGENIC WIND TUNNELS**  
 J. J. THIBODEAUX  
 Nov. 1984 See Also NASA TM-84527 (N82-10082/NSP)  
**LAR-13012** Vol. 8, No. 2, P. 238

Criteria substantiated by experimental and real-time simulation data ensure optimal utilization of liquid nitrogen injected for cooling a 0.3-m transonic cryogenic tunnel (TCT). Research includes simulated cooldowns using procedures normally employed by each of several TCT operators, simulated cooldowns at constant mach number, simulated cooldowns at various constant fan speeds and cooldowns at constant metal-to-gas temperature differences.

**B83-10618**  
**INTERNALLY MOUNTING STRAIN GAGES**  
 J. R. JETT JR. (Northrop Services, Inc.)  
 Nov. 1984  
**GSC-12824** Vol. 8, No. 2, P. 239

Technique for mounting strain gages inside bolt or cylinder simultaneously inserts gage, attached dowel segment, and length of expandable tubing. Expandable tubing holds gage in place while adhesive cures, assuring even distribution of pressure on gage and area gaged.

**B83-10619**  
**HEATER ENSURES STRAIN-GAGE BOND RELIABILITY**  
 J. K. BROWN (Rockwell International Corp.) and M. L. DAVENPORT (Rockwell International Corp.)  
 Nov. 1984  
**MFS 19859** Vol. 8, No. 2, P. 240

Aluminum block with embedded heating element provides concentrated and controllable heat for curing strain-gage adhesives. Device replaces heat lamps and hot-air guns; provides higher temperatures, allows shorter curing times, and ensures more reliable bond. Low temperatures and wind do not significantly affect operation of heater, therefore suited to outdoor use.

**B83-10620**  
**MATHEMATICAL INSTABILITY CRITERIA FOR ELASTIC STRUCTURES**  
 M. ZAK (CALTECH)  
 Nov. 1984

## 06 MECHANICS

**NPO-15090**

**Vol. 8, No. 2, P. 240**  
Theoretical paper discusses physical significance of vanishing of hyperbolic coefficients in equations of elastodynamics. Paper presents generalized approach to structural elastodynamics as part of continuing effort to develop mathematical stability criteria for structures and simulate postinstability behavior of elastics in general.

**B83-10621**

**IMPROVEMENTS IN VIBRATION-ANALYSIS TECHNIQUE**  
R. C. ENGELS (Martin Marietta Corp.)  
Nov. 1984

**MFS-25919; MFS-25920**

**Vol. 8, No. 2, P. 241**  
Two reports present details of vibration-analysis technique. Technique scheme for accurate and efficient numerical integration of coupled equations of motion of vehicle and its payload(s). Applicable to large stationary structures, land vehicles, airplanes, ships, or wherever vibration analysis done repeatedly after each of many design changes.

**B83-10622**

**ADVANCES IN MULTIVALUED-VELOCITY THEORY OF TURBULENCE**

M. A. ZAK (CALTECH)  
Nov. 1984

**NPO-16006**

**Vol. 8, No. 2, P. 241**  
Developments reported in modeling of fluid turbulence as superposition of number of interpenetrating velocity fields. Multivalued-velocity model has practical implications in design of aircraft, turbines, nozzles, pumps, and other systems that involve turbulent flow. In both viscous and inviscid cases, equations made to predict stable regime of oscillations, both finite and independent of initial conditions as in case of real turbulence.

**B83-10623**

**SYSTEM FOR STRUCTURAL SYNTHESIS COMBINES FINITE-ELEMENT ANALYSIS AND OPTIMIZATION PROGRAMS**

J. L. ROGERS JR.  
Nov. 1984

**LAR-13046**

**Vol. 8, No. 2, P. 242**  
Programming System for Structural Synthesis, EAL/PROSS, provides structural-synthesis capability by combining EAL and CONMIN computer programs with set of interface procedures. EAL is general-purpose finite-element structural-analysis program; CONMIN is general-purpose optimization program. User supplies two smaller problem-dependent programs to define design variables, constraints, and objective function.

**B83-10624**

**MINIMIZING WEIGHT OF STRUCTURAL DESIGNS**

L. A. SCHMIT JR. (University of California, Los Angeles)  
and C. FLEURY (University of California, Los Angeles)  
Nov. 1984

**LAR-13107**

**Vol. 8, No. 2, P. 242**  
Approximation Concepts Code for Efficient Structural Synthesis (ACCESS3) combines methods to offer structural system designer powerful, efficient tool for synthesis of minimum-weight designs. Approximation concepts convert general structural synthesis problem into sequence of explicit problems of separable algebraic form; dual method exploits separable form to construct sequence of explicit dual functions.

**B83-10625**

**FREE-VIBRATION ANALYSIS OF STRUCTURES**

K. K. GUPTA (CALTECH)  
Nov. 1984

**NPO-15797**

**Vol. 8, No. 2, P. 243**  
Unified numerical procedure for free-vibration analysis of structures developed and incorporated into EIGSOL computer program. Dynamic response analysis of primary importance in design of wide range of practical structures such as space-craft, buildings, and rotating machineries.

Procedure determines natural frequencies and associated modes in structural design.

**B83-10626**

**THERMAL RADIATION ANALYZER SYSTEM**

J. SKLADANY  
Nov. 1984

**GSC-12783**

**Vol. 8, No. 2, P. 243**  
Thermal Radiation Analyzer System, TRASYS/II, is computer software system with generalized capability to solve radiation-related aspects of thermal-analysis problems. When used in conjunction with generalized thermalanalysis program, such as Systems Improved Numerical Differencing Analyzer (SINDA) program, any thermal problem expressed in terms of lumped-parameter RC thermal network solved.

**B83-10627**

**MEASURING HIGH GAS TEMPERATURES**

H. A. WILL  
Nov. 1984

**LEW-13819**

**Vol. 8, No. 2, P. 243**  
Program provides extrapolation calculations of high gas temperature based on theoretical heating curve of pulsed thermocouples. Program requires as input mach number, wall temperature, and total pressure in addition to thermocouple data. Tests indicate program extrapolates reasonably-accurate gas temperatures from pulsed-thermocouple data.

**B83-10628**

**LAUNCH-WINDOW PROGRAM**

J. A. ERICKSON (Computer Sciences Corp.)  
Nov. 1984

**GSC-12801**

**Vol. 8, No. 2, P. 244**  
Parameterized Investigation of Launch Opportunities and Trajectories (PILOT) program developed to perform mission simulation computations that yield data for use in delimiting optimum launch windows. CoPILOT utility program used to read and format PILOT-generated data file.

**B83-10629**

**ANALYZING FLOW FIELDS IN AXIAL-COMPRESSOR ROTORS AND STATORS**

W. J. THOMPSON JR. (Massachusetts Institute of Technology)  
Nov. 1984

**LEW-13910**

**Vol. 8, No. 2, P. 244**  
Computer program, BLADE3D, developed for analysis of inviscid threedimensional flow fields in single blade passage of axial-compressor rotor or stator. Applicable to arbitrary axial-compressor hub, tip, and blade geometries, including blades with part-span dampers. Also used for axial turbines but with lowered resolution of flows about blunt leading and trailing edges. Analysis method valid for subsonic, transonic and supersonic flows, including choked flows.

**B83-10630**

**GENERAL MANEUVER PROGRAM**

J. A. ERICKSON (Computer Sciences Corp.)  
Nov. 1984

**GSC-12802**

**Vol. 8, No. 2, P. 244**  
General Maneuver Program, GMAN, computes both orbital and spin-axis reorientation maneuver parameters for various spacecraft. Specifically, GMAN computes detailed maneuver scenarios necessary to achieve desired orbit and attitude maneuvers. Program supports both spinning and inertially-fixed despun spacecraft and includes modeling for either hydrazine or Freon propulsion system.

**B83-10631**

**THE MISSION RADIUS AND MANEUVERABILITY CHARACTERISTICS OF FIGHTER AIRCRAFT**

W. E. FOSS JR.  
Nov. 1984

**LAR-12908**

**Vol. 8, No. 2, P. 245**  
Computer program provides detailed analysis of mission

radius and maneuverability characteristics of combat aircraft. Program combination of five mission modules representing mission profiles currently of interest. Each mission Module designed to determine combat radius or range capability for specific mission with associated ground rules and profile definitions.

**B83-10632**  
**ELLIPTICAL ORBIT PERFORMANCE COMPUTER PROGRAM**

T. MYLER (Vought Corp.)

Nov. 1984

**LAR-13026** Vol. 8, No. 2, P. 245

Elliptical Orbit Performance (ELOPE) computer program for analyzing orbital performance of space boosters uses orbit insertion data obtained from trajectory simulation to generate parametric data on apogee and perigee altitudes as function of payload data. Data used to generate presentation plots that display elliptical orbit performance capability of space booster.

**B83-10633**  
**TAKEOFF AND LANDING OF TRANSPORT AIRCRAFT**

W. E. FOSS JR.

Nov. 1984

**LAR-13086** Vol. 8, No. 2, P. 245

Computer program provides detailed analysis of takeoff and landing performance capabilities of transport-category aircraft. Performance calculated according to airworthiness standards of Federal Aviation Regulations. Program used to investigate advanced takeoff procedures for noise alleviation, such as programmed throttle and control flaps.

**B83-10634**  
**ACCURACY CRITERION FOR STRUCTURAL CALCULATIONS**

J. C. CHEN (CALTECH)

Nov. 1984

**NPO-18008** Vol. 8, No. 2, P. 246

Simple method of establishing an accuracy criterion based on comparing allowable errors and modeling errors. On basis of comparison, amounts of change required to improve modeling error used in convergence criterion.

**B83-10635**  
**THERMAL AND FLOW DATA FROM LIQUID-OXYGEN SYSTEM**

F. LIN, W. MOORE, and S. WALKER

Nov. 1984

**KSC-11265** Vol. 8, No. 2, P. 246

Extensive flow rate, pressure, and temperature data available for validating computer models of liquid-oxygen transfer systems. Data on 'waterhammer' pressure spikes included.

**B83-10636**  
**LOW-SHOCK PYROTECHNIC ACTUATOR**

M. H. LUCY

Nov. 1984

**LAR-13198** Vol. 8, No. 2, P. 246

Miniature 1-ampere, 1-watt pyrotechnic actuator enclosed in flexible metal bellows. Bellows confines outgassing products, and pyrotechnic shock reduction achieved by action of bellows, gas cushion within device, and minimum use of pyrotechnic material. Actuator inexpensive, compact, and lightweight.

**B83-10637**  
**TEST FRAME SIMULATES ZERO GRAVITY**

D. CHUNG (Lockheed Missiles & Space Co., Inc.) and D. LINDBERG (Lockheed Missiles & Space Co., Inc.)

Nov. 1984

**MFS-25518** Vol. 8, No. 2, P. 247

Counterweighted frame simulates zero gravity in tests of solar-array wing. Net effect close simulation of zero-gravity environment in which wing must function. Frame also

facilitates testing and replacement of solar-cell elements and panels.

**B93-10638**  
**SIMULATING A THREE-DIMENSIONAL FLOW IN PIPES**

A. LEONARD and A. A. WRAY

Nov. 1984

**ARC-11466** Vol. 8, No. 2, P. 247

Numerical method simulates in unsteady, incompressible flow in axisymmetric pipe in three dimensions. Method relies on velocity-vector expansion technique in which each vector function in expansion set is divergence-free and satisfies boundary conditions for viscous flow.

**B83-10639**  
**MICROYIELD STRESS IN COMPOSITE MATERIALS**

L. MCMAHAN (Boeing Aerospace Co.) and R. POND (Boeing Aerospace Co.)

Nov. 1984

**MFS-25709** Vol. 8, No. 2, P. 247

New interferometric method for measuring microyield stress faster and more accurate than previous strain-gage method. Multiple laser beams reflected from corner-cube reflectors arranged in triangular patterns yielding data sufficient to separate length changes from rigid-body motion and bending.

**B83-10640**  
**INSPECTING JOINTS WITH GROOVED SURFACES**

B. S. BURNS

Nov. 1984

**MFS-25934** Vol. 8, No. 2, P. 247

Method of inspecting grooved joints covers full circumference of joint at its various depths. Inspection tools include guide block that holds fiberoptic scope with camera attached to its end and also holds light pipe with ultraviolet source attached to end.

**B83-10641**  
**ANALYZING VIBRATIONS IN A LONG MAST**

B. SIMPSON (Lockheed Missiles & Space Co., Inc.)

Nov. 1984

**MFS-25746** Vol. 8, No. 2, P. 247

Report describes mathematical prediction and measurement of vibrations in light weight extensible mast of lattice structure. With mast suspended from 10 vertical wires, vibrations excited in horizontal plane by motor-driven mechanism or by hand. Vibrations recorded photographically and with accelerometers.

**B83-10642**  
**TRACKING VISIBLE TARGETS AUTOMATICALLY**

R. W. ARMSTRONG (CALTECH)

Nov. 1984

**NPO-15226** Vol. 8, No. 2, P. 247

Report summarizes techniques for automatic pointing of scientific instruments by reference to visible targets. Applications foreseen in industrial robotics. Measurement done by image analysis based on gradient edge location, image-centroid location and/or outline matching.

**B83-10643**  
**SAFE EMERGENCY EVACUATION FROM TALL STRUCTURES**

E. S. STEPHAN

Nov. 1984

**KSC-11225** Vol. 8, No. 2, P. 248

Emergency egress system allows people to be evacuated quickly from tall structures. New emergency system applicable to rescues from fires in tall hotels and other buildings. System consists of basket on slide wire. Basket descends by gravity on sloped slide wire staked to ground.

**B83-10644**  
**MATHEMATICAL SIMULATION OF FLIGHT MANEUVERS**

R. B. FRAUENHOLZ (CALTECH)

## 06 MECHANICS

Nov. 1984

**NPO-15395**

**Vol. 8, No. 2, P. 248**

Mathematical model simulates response of spin-stabilized spacecraft to commanded thruster pulses, using set of equations based on known inertial properties of vehicle and previously-determined thruster performance. Model used to generate sequence of thruster commands to accomplish specified maneuver.

**B83-10645**

**TRACE-LEVEL SOLID-POLYMER ELECTROLYTE HYDROMETER**

E. G. LAUE (CALTECH), J. B. STEPHENS (CALTECH), and M. M. L. YANG (CALTECH)

Nov. 1984

**NPO-15722**

**Vol. 8, No. 2, P. 248**

Water vapor absorbed by solid polymer electrolyte detected by measuring current required to electrolyze water.

**B83-10646**

**SUBMICRON-PARTICLE GENERATOR**

E. MORRISETTE and D. BUSHNELL

Nov. 1984

**LAR-12785**

**Vol. 8, No. 2, P. 248**

Particle generator supplies submicron-size particles to high-pressure airstream. Particles serve as light scatterers in laser velocimeter for ultra-high-speed gas. Advantage of generator: produces cloud of uniform, submicron particles at high ambient pressures and high flow rates.

**B83-10647**

**PARTIAL-PAYLOAD SUPPORT STRUCTURE**

R. MITCHELL (Brown Engineering) and M. FREEMAN (Brown Engineering)

Nov. 1984

**MFS-25485**

**Vol. 8, No. 2, P. 249**

Partial-payload support structure (PPSS) is modular, bridge like structure supporting experiments weighing up to 2 tons. PPSS handles such experiments more economically than standard Spacelab pallet system.

**B83-10648**

**FATIGUE TESTING OF HEAT-EXCHANGER TUBES**

P. ACKERMAN (Rockwell International Corp.)

Nov. 1984

**MFS-19599**

**Vol. 8, No. 2, P. 249**

Accelerated fatigue-life testing of heat-exchanger tubes simplified by technique that substitutes mechanical side load for thermally-generated axisymmetric stress. Load amplitudes adjusted to produce strains equivalent to those produced by anticipated thermal stress.

**B83-10649**

**PORTABLE FATIGUE-TESTING MACHINE**

J. LEWIS (Rockwell International Corp.) and C. DAUGHERTY (Rockwell International Corp.)

Nov. 1984

**MFS-19459**

**Vol. 8, No. 2, P. 249**

Portable machine constructed for fatigue testing of structural materials or machinery parts subjected to fatigue loads. Piezoelectric crystal stack adds oscillatory force to constant force. Machine tests wider variety of objects than with usual rotating-beam fatigue tests.

**B83-10650**

**BRUSHLESS LOW-SPEED DC TACHOMETER**

M. B. HANDLYKKEN (CALTECH)

Nov. 1984

**NPO-15706**

**Vol. 8, No. 2, P. 249**

Proposed tachometer produces voltages proportional to shaft angular velocity and (by differentiation) acceleration. Coil moving in homopolar field generates emf proportional to shaft angular velocity.

**B83-10651**

**OPTICAL TURBOPUMP SPEED SENSOR**

D. SWAIN (Rockwell International Corp.)

Nov. 1984

**MFS-19794**

**Vol. 8, No. 2, P. 249**

Optical tachometer measures shaft rotation from outside turbopump housing. Laser-diode beam passes through quartz lens into shaft nut with alternating reflective and nonreflective surfaces. Reflected pulses collected by lens and transmitted to photodetector.

**B83-10652**

**THEORY FOR ECCENTRIC AND MISALIGNED ANNULAR SEALS**

E. JACKSON (Rockwell International Corp.) and W. CHEN (Rockwell International Corp.)

Nov. 1984

**MFS-19892**

**Vol. 8, No. 2, P. 249**

Theory describes behavior of eccentric and angularly-misaligned incompressible-fluid shaft seals. Direct and cross-coupled stiffness and damping coefficients expressed in terms of degree of eccentricity and coefficients of concentric system.

**B83-10653**

**BELLEVILLE SPRING/SEAL**

D. P. BRADLEY (Rockwell International Corp.)

Nov. 1984

**MFS-19596**

**Vol. 8, No. 2, P. 250**

Metallic seal for cavity openings in liquid-nitrogen environments uses Belleville-spring preloaded washer. Due to preloading, Belleville spring/ seal washers slide and deflect to accept radial and axial movement between two sealing surfaces while remaining in sealing contact.

**B83-10654**

**LEAK TEST FOR PRESSURE-SEALING ZIPPERS**

E. ERICKSON (Kelly Services)

Nov. 1984

**KSC-11247**

**Vol. 8, No. 2, P. 250**

Test jig checks either side of pressure-sealing zippers for leaks. Procedure takes little time, and seal failure determined before zipper incorporated into suit.

**B83-10655**

**BARRIER SELF FOR HYDRAULIC ACTUATORS**

R. E. PROUT (Rockwell International Corp.) and F. MILLER (Moog, Inc.)

Nov. 1984

**MSC-20390**

**Vol. 8, No. 2, P. 250**

Barrier seal slows loss of pressurized hydraulic fluid due to leakage in primary seal. Barrier seal, placed downstream of primary O-ring seal, serves as secondary obstacle to leakage.

**B83-10656**

**SUPERSONIC-NOZZLE SHOCK-WAVE ANALYSIS**

W. R. WAGNER (Rockwell International Corp.) and G. H. RATEKIN (Rockwell International Corp.)

Nov. 1984

**MFS-19753**

**Vol. 8, No. 2, P. 250**

Analytical procedure used to modify design of high-pressure-ratio nozzles to reduce vibration during start-up and shutdown. Nozzles used in jet engines, laser nozzles and diffusers, wind tunnels, gas turbines and rocket engines.

**B83-10657**

**NONSEPARATING HIGH-AREA-RATIO SUPERSONIC NOZZLES**

W. R. WAGNER (Rockwell International Corp.) and R. R. KASSNER (Rockwell International Corp.)

Nov. 1984

**MFS-19758**

**Vol. 8, No. 2, P. 250**

Procedure determines supersonic-nozzle contours that allow higher nozzle-exit wall pressures, reducing chamber pressure without causing wall-flow separation as encountered in optimum large-area-ratio nozzle designs. Pro-

cedure applies to chemical-laser nozzles, jet-engine and gas turbines, wind tunnels and rocket nozzles.

## 07 MACHINERY

### **B83-10083** **REMOTE MANIPULATOR HAS RELISTIC 'FEEL'** A. K. BEJCZY (CALTECH)

Aug. 1983  
**NPO-15065** **Vol. 7, No. 3, P. 321**  
Computer aided remote manipulator does not transmit weight and inertia of its own joints and segments. Achieves load sensitivity by processing signals that move manipulator separately from those that apply reflective forces and torques on hand controller. Operator feels only load.

### **B83-10084** **PRESSURE REDUCER FOR COAL GASIFIERS** S. KENDALL, JAMESM. (CALTECH)

Aug. 1983  
**NPO-15100** **Vol. 7, No. 3, P. 322**  
Quasi-porous-plug pressure reducer is designed for gases containing abrasive particles. Gas used to generate high pressure steam to drive electric power generators. In giving up heat to steam, gas drops in temperature. Device used for coal gasification plants.

### **B83-10085** **PASSIVE MAGNETIC BEARING** P. A. STUDER

Aug. 1983  
**GSC-12726** **Vol. 7, No. 3, P. 323**  
Magnetic bearing for limited rotation devices requires no feedback control system to sense and correct shaft position. Passive Magnetic Torsion Bearing requires no power supply and has no rubbing parts. Torsion wire restrains against axial instability. Magnetic flux geometry chosen to assure lateral stability with radial restoring force that maintains alignment.

### **B83-10086** **WIND TURBINE WITH CONCENTRIC DUCTS** A. J. MUHONEN (Boeing Services International)

Aug. 1983  
**KSC-11191** **Vol. 7, No. 3, P. 324**  
Wind Turbine device is relatively compact and efficient. Converging inner and outer ducts increase pressure difference across blades of wind turbine. Turbine shaft drives alternator housed inside exit cone. Suitable for installation on such existing structures as water towers, barns, houses, and commercial buildings.

### **B83-10087** **ELECTROCHEMICAL DEBURRING** R. K. BURLEY (Rockwell International Corp.)

Aug. 1983  
**MFS-19693** **Vol. 7, No. 3, P. 324**  
Electrochemical deburring removes burrs from assembled injector tubes. Since process uses liquid anodic dissolution in liquid electrolyte to provide deburring action, smoothes surfaces and edges in otherwise inaccessible areas. Tool consists of sleeve that contains metallic ring cathode. Sleeve is placed over tube, and electrolytic solution is forced to flow between tube and sleeve. The workpiece serves an anode.

### **B83-10088** **COIL WELDING AID**

W. T. WIESENBACH (Rockwell International Corp.) and M. C. CLARK (Rockwell International Corp.)  
Aug. 1983

**MSC-20470** **Vol. 7, No. 3, P. 325**  
Positioner holds coil inside cylinder during tack welding. Welding aid spaces turns of coil inside cylinder and applies contact pressure while coil is tack-welded to cylinder. Device facilitates fabrication of heat exchangers and other structures by eliminating hand-positioning and clamping of individual coil turns.

### **B83-10089** **GAGE MEASURES RECESSED GAPS** J. L. ZEPEDA (Rockwell International Corp.)

Aug. 1983  
**MSC-20230** **Vol. 7, No. 3, P. 326**  
New tool measures separation between recessed parallel surfaces. Tiles have overhanging edges, tool designed to slip into gap from end so it extends through 0.040-inch crack. Measure gaps between 0.200 and 0.400 inch so gap fillers of proper thickness can be selected. Useful in numerous industrial situation involving gap measurements in inaccessible places.

### **B83-10090** **TOOLING CONVERTS STOCK BEARINGS TO CUSTOM BEARINGS**

E. N. FLEENOR JR.  
Aug. 1983  
**LAR-12922** **Vol. 7, No. 3, P. 327**

Technique for reworking stock bearings saves time and produces helicopter-rotor bearings ground more precisely. Split tapered ring at one end of threaded bolt expands to hold inside of inner race bearing assembly; nut, at other end of bolt, adjusts amount of spring tension. Piece of hardware grasps bearing firmly without interfering with grinding operation. Operation produces bearing of higher quality than commercially available bearings.

### **B83-10091** **DRILLING PRECISE ORIFICES AND SLOTS**

C. W. RICHARDS (Marquardt Co.) and J. E. SEIDLER (Marquardt Co.)  
Aug. 1983

**MSC-20053** **Vol. 7, No. 3, P. 328**  
Reaction control thruster injector requires precisely machined orifices and slots. Tooling setup consists of rotary table, numerical control system and torque sensitive drill press. Components used to drill oxidizer orifices. Electric discharge machine drills fuel-feed orifices. Device automates production of identical parts so several are completed in less time than previously.

### **B83-10092** **ROBOTIC WATER BLAST CLEANER**

M. H. SHARPE, M. L. ROBERTS, W. E. HILL, and C. H. JACKSON  
Aug. 1983

**MFS-25519** **Vol. 7, No. 3, P. 329**  
Water blasting system under development removes hard, dense, extraneous material from surfaces. High pressure pump forces water at supersonic speed through nozzle manipulated by robot. Impact of water blasts away unwanted material from workpiece rotated on air bearing turntable. Designed for removing thermal-protection material, system is adaptable to such industrial processes as cleaning iron or steel castings.

### **B83-10093** **STAKED BEARING REMOVAL TOOL**

L. A. BERSON (Rockwell International) and R. G. BIRD (Rockwell International)  
Aug. 1983

**MSC-20337** **Vol. 7, No. 3, P. 330**  
Tool with assembled components expedites bearing replacement in aircraft, ground vehicles, and other applica-

## 07 MACHINERY

tions. New tool cuts lip on one side to facilitate bearing replacement. After bearing retaining lip is cut away, bearing pressed out. Tool makes it possible to replace bearings without disassembling structure.

**B83-10094**

### SELF-ALINING QUICK-CONNECT JOINT

M. H. (LUCY)

Aug. 1938

LAH-12711

Vol. 7, No. 3, P. 331

Quick connect tapered joint used with minimum manipulation and force. Split ring retainer holds locking ring in place. Minimal force required to position male in female joint, at which time split-ring retainers are triggered to release split locking rings. Originally developed to assemble large space structures, joint is simple, compact, strong, lightweight, self aligning, and has no loose parts.

**B83-10095**

### SELF-LOCKING CONNECTOR

K. GASPAR (Rockwell International Corp.)

Aug. 1983

MFS-19716

Vol. 7, No. 3, P. 332

Connector lock resists vibration, automatically compensates for wear, and exhibits no backlash when parts are seated. Mechanism built into coupling nut on outer connector body. Outer collar turned clockwise to tighten treaded coupling nut, transmitting torque to coupling nut through six radially oriented pins.

**B83-10096**

### LATCHING MECHANISM FOR UMBILICAL CONNECTORS

G. C. BURNS (McDonnell Douglas Corp.)

Aug. 1983

MSC-20242

Vol. 7, No. 3, P. 333

Electromechanical interface transfers electric power, data and coolant from one system to another. Motor-actuated jackscrew moves connector on active half of interface to mating connector on passive half. Originally suggested for spacecraft, concept adaptable to underwater connections.

**B83-10097**

### REUSABLE HIGH-PRESSURE CONNECTOR

H. O. C. JENSEN (Rockwell International Corp.), H. M. MALTYBY (Rockwell International Corp.), and J. A. STEIN (Rockwell International Corp.)

Aug. 1983

MSC-20339

Vol. 7, No. 3, P. 334

Fluid line connector for high pressure tests has split ferrule, nut, and O-ring seal. Following test, ferrule nut, and O-ring fitting are removed leaving line unaltered except for bushing braze to free end. Connector assures strong joint for high-pressure testing without redundant parts requiring posttest debrazing.

**B83-10098**

### RETAINING-RING INSTALLATION TOOL

S. CHRISTIAN (Rockwell International)

Aug. 1983

MFS-19725

Vol. 7, No. 3, P. 334

New tool eliminates damage to ring through improper tool use. Tool installs spiral-wound retaining rings quickly, reliably, and safely. Tool inserts rings in splined or irregularly shaped bores, bores at bottom of deep ring and slides it along bore until it nests in groove. Pistons are moved by variety of linkages.

**B83-10099**

### MACHINING THREE PRONGS ON A SHAFT

C. HEWITT (Rockwell International)

Aug. 1983

MFS-19729

Vol. 7, No. 3, P. 335

Simple tool reduces set-up and machining time by more than 70 percent. Unorthodox tooling arrangement used to machine three prongs on end of specialpurpose wrench.

Modified carbide-tipped spot-facing tool rotated at 1,400 to 1,600 revolutions per minute in small milling machine and applied to work piece, held with its corners in spaces of three-cornered collect.

**B83-10100**

### SELF-CLEANING TUBULAR-MEMBRANE MODULE

M. N. SARBOLOUKI (CALTECH)

Aug. 1983

NPO-15245

Vol. 7, No. 3, P. 335

Tubular membranes made self-cleaning with aid of flow reversing valve. Sponge balls scrub membrane surfaces as they travel inside membrane tubes. A four-way flow-reversal valve automatically reverses flow in tubes at preset intervals so sponge balls reciprocate along tubes. Baskets at ends of tubes prevent sponges from escaping. Automatic cleaning feature added to existing membrane processing equipment with minimal modifications.

**B83-10101**

### AIR-LUBRICATED LEAD SCREW

G. S. PERKINS (CALTECH)

Aug. 1983

NPO-15617

Vol. 7, No. 3, P. 336

Air lubricated lead screw and nut carefully machined to have closely matched closely fitting threads. Compressed air injected into two plenums encircle nut and flow through orifices to lubricate mating threads. Originally developed to position precisely interferometer retroreflector for airborne measurement of solar infrared radiation, device now has positioning accuracy of 0.25 micron.

**B83-10102**

### FLOW THROUGH A ROTATING TURBOMACHINERY BLADE ROW

C. A. FARRELL JR.

Aug. 1983

LEW-13832

Vol. 7, No. 3, P. 337

Computer program, QSONIC, developed for calculating full potential transonic quasi-three dimensional flow through rotating turbomachinery blade row. QSONIC written in FORTRAN IV.

**B83-10103**

### COMPRESSIBLE FLOW ABOUT WIND TURBINE BLADES

D. S. DULIKRAVICH

Aug. 1983

LEW-13740

Vol. 7, No. 3, P. 337

WIND program numerically solves exact full-potential equation for three dimensional, steady inviscid flow through isolated wind-turbine rotor. Program automatically generates three dimensional, boundary-conforming grid and iteratively solves full-potential equation while fully accounting for rotating and Coriolis effects. Program written in FORTRAN IV.

**B83-10104**

### CALCULATING THE FLOW FIELD IN A RADIAL TURBINE SCROLL

E. BASKHARONE (University of Cincinnati), S. ABDALLAH (University of Cincinnati), A. HAMED (University of Cincinnati), and W. TABAOFF (University of Cincinnati)

Aug. 1983

LEW-13437

Vol. 7, No. 3, P. 338

Set of two computer programs calculates flow field in radial turbine scroll. Programs represent improvement in analyzing flow in radial turbine scrolls and provide designer with tools for designing better scrolls. Programs written in FORTRAN IV.

**B83-10107**

### COAXIAL REDUNDANT DRIVES

R. BRISSETTE (American Science & Engineering, Inc.)

Oct. 1983

MFS-25171

Vol. 7, No. 4, P. 441

Harmonic drives allow redundancy and high out put

torque in small package. If main drive fails, standby drive takes over and produces torque along same axis as main drive. Uses include power units in robot for internal pipeline inspection, manipulators in deep submersible probes or other applications in which redundancy protects against costly failures.

**B83-10198**  
**CRYOGENIC VACUUM PUMP**  
C. A. ZACHMAN (CALTECH)  
Oct. 1983

**NPO-15517** Vol. 7, No. 4, P. 442  
System provides high pumping capacity even for noble gases. First stage, removes water and CO<sub>2</sub> from input gas. Second stage, removes noble gases except helium and some lighter gases not trapped by first stage. Third stage, traps all remaining gases. All three stages mounted inside liquid-nitrogen Dewar that cools first stage. Pump small enough for general laboratory use.

**B83-10199**  
**JET ENGINES AS HIGH-CAPACITY VACUUM PUMPS**  
C. J. WOJCIECHOWSKI (Lockheed Missiles & Space Co., Inc.)  
Oct. 1983  
**MFS-25791** Vol. 7, No. 4, P. 443

Large diffuser operations envelope and long run times possible. Jet engine driven ejector/diffuser system combines two turbojet engines and variable-area-ratio ejector in two stages. Applications in such industrial processes as handling corrosive fumes, evaporation of milk and fruit juices, petroleum distillation, and dehydration of blood plasma and penicillin.

**B83-10200**  
**SPOOL-VALVE PRESSURE-DIFFERENCE REGULATOR**  
A. P. GRASSO (United Technologies Corp.)  
Oct. 1983  
**MSC-20127** Vol. 7, No. 4, P. 443

Valves maintain preset pressure difference between gas flows. Two spool valves connected by shaft move back and forth in response to changes in pressure in oxygen and hydrogen chambers. Spool-valve assembly acts to restore pressures to preset difference. By eliminating diaphragms, pressure exerted directly on external end of spool valve; however, forces and therefore sensitivity of assembly are reduced.

**B83-10201**  
**RETRACTABLE ROTATING DOOR LATCH**  
R. B. CARSLY (Rockwell International Corp.)  
Oct. 1983  
**MSC-20304** Vol. 7, No. 4, P. 444

New mechanism turns door latch, latching or unlatching door, then retracts until latch is flush with surface of door frame. Concentric cylinders have cam grooves machined in surfaces. When rotated relative to each other cylinders impart rotation and translation to shaft of door latch. Motions may proceed separately or simultaneously.

**B83-10202**  
**LOCKING BOLT**  
B. E. BOSWELL (McDonnell Douglas Corp.)  
Oct. 1983  
**MSC-20439** Vol. 7, No. 4, P. 445

Locking ball in bolt head holds wrench in place. Head of bolt contains locking ball and releases pin to grasp box wrench or other tool. Installed in cramped spaces that prevent operator from using both hands or maneuverability restricted by bulky clothing or obstacles.

**B83-10203**  
**EXPANDER FOR THIN-WALL TUBING**  
R. PESSIN (Rockwell International Corp.)  
Oct. 1983  
**MFS-19739** Vol. 7, No. 4, P. 445

Tool locally expands small-diameter tubes. Tube expander locally expands and deforms tube: Compressive lateral stress induced in elastomeric sleeve by squeezing axially between two metal tool parts. Adaptable to situations in which tube must have small bulge for mechanical support or flow control.

**B83-10204**  
**TRANSPORTER FOR TREATED SHEET MATERIALS**  
M. POLLACK, H. (Fairchild Republic Co.)  
Oct. 1983  
**MSC-20332** Vol. 7, No. 4, P. 446

Plastic spacers keep parts separated during transport or storage. Cart with rods and spacers holds sheets with delicate finishes for storage or transport. Sheets supported vertically by rods, or horizontally. Spacers keep sheets separated. Designed to eliminate time and expense of taping, wrapping, and sometimes refinishing aluminum sheets with delicate anodized finish.

**B83-10205**  
**TOOL FOR GUIDING AN AUGER**  
C. J. WESELSKI  
Oct. 1983  
**MSC-20194** Vol. 7, No. 4, P. 447

Auger and Ram have same pitch, which minimizes damage to workpiece and load carried by auger. Auger firmly fastened onto ram shaft by screw and kept from rotating on shaft by slot machined into end of stem and male driving lug that engages slot. Used to install threaded studs in plastic or rubber where impractical to mold them in.

**B83-10206**  
**BENDER/COILER FOR TUBING**  
J. M. STOLTZFUS (Lockheed Corp.)  
Oct. 1983  
**MSC-20410** Vol. 7, No. 4, P. 448

Easy-to-use tool makes coils of tubing. Tubing to be bend clamped with stop post. Die positioned snugly against tubing. Operator turns handle to slide die along tubing, pushing tubing into spiral groove on mandrel.

**B83-10207**  
**PLASTIC CLAMP RETAINS CLEVIS PIN**  
R. G. CORTES (Rockwell International Corp.)  
Oct. 1983  
**MFS-19747** Vol. 7, No. 4, P. 448

Plastic clamp requires no special installation or removal tools. Clamp slips easily over end of pin. Once engaged in groove, holds pin securely. Installed and removed easily without special tools - screwdriver or putty knife adequate for prying out of groove. Used to retain bearings, rollers pulleys, other parts that rotate. Applications include slowly and intermittently rotating parts in appliances.

**B83-10208**  
**PORTABLE ROLLER STAKING TOOL**  
R. G. BIRD (Rockwell International Corp.) and L. A. BERSON  
Oct. 1983  
**MSC-20281** Vol. 7, No. 4, P. 449

Staking tool compact and portable. Tool combines clamping and staking operations in single unit. Tool clamps workpiece (a bearing or bushing), aligns it, and stakes on of flat faces. Used for most roller staking operations which access both faces of workpiece.

**B83-10209**  
**TOOL FOR REPLACING BUSHINGS**  
R. G. BIRD (Rockwell International Corp.)  
Oct. 1983  
**MSC-20282** Vol. 7, No. 4, P. 450

Centerlines of original bushings maintained. Tool frame extends around structure that holds bushings to be removed. Floating bushings of tool positioned with jig pin that slides

## 07 MACHINERY

snugly in old bushing and floating tool bushings. Floating bushings then clamped to tool frame.

**B83-10210**

### TESTING BEARINGS IN TIGHT SPACES

R. G. BIRD (Rockwell International Corp.) and L. A. BERSON  
Oct. 1983

**MSC-20250**

**Vol. 7, No. 4, P. 451**

Portable tool checks bushings and bearings in hard-to-reach places to ensure they are properly staked. Actuator plate with surfaces at 45 degrees to hydraulic cylinder shaft turns push or pull perpendicular to original direction. Tool makes unnecessary to disassemble equipment to gain access to parts.

**B83-10211**

### HOLDING TUBES IN PLACE FOR BRAZING

D. AMBRISCO (Rockwell International) and P. ARBINO  
(Rockwell International)

Oct. 1983

**MFS-19658**

**Vol. 7, No. 4, P. 452**

Simple method prevents loosening due to thermal mismatch. Four segment die pushed outward against tubing wall by tapered ram. Boss on each segment of die produces dimple in wall. Ram driven by commercial pneumatic cylinder powered by air at 250 psi. Method applicable to brazing of heat exchangers, thrust chambers, and other assemblies in which thermal expansion coefficients of materials differ significantly.

**B83-10212**

### HOLDER FOR FRAGILE PARTS

L. R. HOLLAND (Athens State College)

Oct. 1983

**MFS-25772**

**Vol. 7, No. 4, P. 453**

Fixture with many springfingers holds irregularly-shaped parts. Gripping fixture has hundreds of springfingers, each applies minute force. Total force approximates hydrostatic pressure, resulting in well-distributed load that maintains firm grip without high stress concentrations. Applied to industrial robot manipulators, fixture enhances ability to grasp delicate parts.

**B83-10213**

### THERMAL ELASTOHYDRODYNAMIC LUBRICATION OF SPUR GEARS

K. L. WANG (Northwestern University) and H. CHENG  
(Northwestern University)

Oct. 1983

**LEW-13528**

**Vol. 7, No. 4, P. 454**

Analysis and computer program (TELSGE) predict variations of dynamic load and surface temperature and lubricant film thickness along contacting path of pair of involute spur gears. Analysis of dynamic load includes effect of gear inertia, effect of load sharing of adjacent teeth, and effect of variable tooth stiffness obtained by element method. TELSGE written in FORTRAN IV.

**B83-10407**

### LATCH FOR STORED CARGO

K. H. CLARK

Apr. 1984

**MFS-25837**

**Vol. 8, No. 1, P. 97**

Spherical latch elements distribute load over broad area. Concave and convex latching surfaces couple with one another to secure payload. Motor-drive pin locks latch in place; for active latch, second motor turns connecting plate attached to concave latch element. Spherical shape of latching elements distributes cargo weight over broad surface so no 'hotspots' when cargo secured.

**B83-10408**

### VARIABLE-CONDUCTANCE HEAT-TRANSFER MODULE

D. R. HEWITT

Apr. 1984

**GSC-12771**

**Vol. 8, No. 1, P. 98**

Working lengths of heat pipes electronically controlled. Rate of heat transfer controlled by electrical heaters shorten effective working lengths of heat pipes. Concept not limited to right circular cylindrical shape. Concept adaptable to terrestrial instruments or processes in which atmospheres or fluids must be cooled and returned to instruments or processes at fixed lower temperatures.

**B83-10409**

### THREE-FINGERED ROBOT HAND

C. F. RUOFF (CALTECH) and J. K. SALISBURY (CALTECH)  
Apr. 1984

**NPO-15959**

**Vol. 8, No. 1, P. 99**

Mechanical joints and tendons resemble human hand. Robot hand has three 'human-like' fingers. 'Thumb' at top. Rounded tips of fingers covered with resilient material provides high friction for gripping. Hand potential as prosthesis for humans.

**B83-10410**

### EQUATIONS FOR AUTOMOTIVE-TRANSMISSION PERFORMANCE

S. CHAZANOFF (CALTECH), M. B. ASTON (CALTECH),  
and C. P. CHAPMAN (CALTECH)

Apr. 1984

**NPO-15825**

**Vol. 8, No. 1, P. 100**

Curve-fitting procedure ensures high confidence levels. Three-dimensional plot represents performance of small automatic transmission coasting in second gear. In equation for plot, PL power loss, S speed and T torque. Equations applicable to manual and automatic transmissions over wide range of speed, torque, and efficiency.

**B83-10411**

### PORTABLE X-Y SCANNER

G. W. KURTZ and B. F. BANKSTON

Apr. 1984

**MFS-25687**

**Vol. 8, No. 1, P. 100**

Lightweight device uses one drive motor for surface scanning. Electromechanical X-Y Scanner indexed in both x and y by single motor. Constructed of readily available inexpensive parts. Used to move eddycurrent sensor over surface of metal plate; other applications for unique features include low power consumption, light weight, and portability.

**B83-10412**

### HOLE-CENTER LOCATING TOOL

H. F. SENTER (Boeing Services International)

Apr. 1984

**KSC-11248**

**Vol. 8, No. 1, P. 101**

Tool aligns center of new hole with existing hole. Tool marks center of new hole drilled while workpiece is in place. Secured with bolts while hole center marked with punch. Used for field installations where reference points unavailable or work area cramped and not easily accessible with conventional tools.

**B83-10413**

### TOOL ENLARGES HARD-TO-REACH HOLES

J. P. GEDDES (Rockwell International Corp.)

Apr. 1984

**MFS-19789**

**Vol. 8, No. 1, P. 102**

Tool centers itself and cuts precise depth. Tool consists of crosscut carbide bur; sleeve that serves as depth stop and pilot; length of flexible, strong piano wire; and standard drive socket. Parts brazed together. Piano wire transmits torque and axial force to cutting tool.

**B83-10414**

### ESTIMATING PUMP BLOCKAGE

W. CHUNG (Rockwell International Corp.), S. Y. MENG  
(Rockwell International Corp.), and C. Y. MENG (Rockwell  
International Corp.)

Apr. 1984

**MFS-19763**

**Vol. 8, No. 1, P. 102**

Blockage predicted for all components including induc-

ers, impellers and diffusers. Pump performance predicted by semiempirical method shows excellent agreement with test results in Space Shuttle main-engine highpressure fuel turbopump. Comparisons of pump efficiency show equally good agreement of calculated values with experimental ones. Method improves current estimation methods based solely on subjective engineering judgment.

**B83-10415****WIRE RETRIEVES BROKEN PIN**

G. H. BUROW (Rockwell International Corp.)

Apr. 1984

**MFS-19768****Vol. 8, No. 1, P. 103**

Safety wire retains pieces of broken tool. Retrieval wire running through shaft of tool used to pull pieces of tool out of hole, should tool break during use. Safety wire concept suitable for pins subject to deflection or breakage.

**B83-10416****CONTROL-CHAIN SAFETY TRAY AND FRICTION PULL**

G. HAJDIK and C. R. PEEK (Pan American World Airways, Inc.)

Apr. 1984

**MSC-20401****Vol. 8, No. 1, P. 104**

Tray mounted above suspended ceiling keeps sprinkler-system control chain safely out of way of pedestrian traffic below. Tray reached easily by using fireman's hook short stepladder, or chair or by jumping up to grasp chain. Safety tray used for infrequently used control chains on vents and dampers.

**B83-10417****AUTOMATED COAL-MINE SHUTTLE CAR**

E. R. COLLINS JR. (Caltech)

Apr. 1984

**NPO-15850****Vol. 8, No. 1, P. 105**

Cable-guided car increases efficiency in underground coal mines. Unmanned vehicle contains storage batteries in side panels for driving traction motors located in wheels. Batteries recharged during inactive periods or slid out as unit and replaced by fresh battery bank. Onboard generator charges batteries as car operates.

**B83-10418****SHUTTLE-CAR SYSTEM FOR CONTINUOUS MINING**

E. R. COLLINS JR. (Caltech)

Apr. 1984

**NPO-15949****Vol. 8, No. 1, P. 106**

Buffer storage catches coal production between loadings. Telescoping reservoir filled continuously. With tailgate down, shuttle car slides into place along sides and bottom of reservoir. Reservoir retracts along inside of car and out through tailgate, leaving coal behind in car. System not restricted to coal mining and may prove economical for hauling other solid materials.

**B83-10419****MECHANICAL COAL-FACE FRACTURER**

E. R. COLLINS JR. (Caltech)

Apr. 1984

**NPO-15847****Vol. 8, No. 1, P. 107**

Radial points on proposed drill bit take advantage of natural fracture planes of coal. Radial fracture points retracted during drilling and impacted by piston to fracture coal once drilling halts. Group of bits attached to array of pneumatic drivers to fracture large areas of coal face.

**B83-10420****SHOCK MOUNTING FOR HEAVY MACHINES**

A. R. THOMPSON (Thiokol Corp.)

Apr. 1984

**MFS-25888****Vol. 8, No. 1, P. 107**

Elastomeric bearings eliminate extraneous forces. Rocket thrust transmitted from motor to load cells via support that absorbs extraneous forces so they do not affect accuracy of thrust measurements. Adapter spoked cone

fits over forward end of rocket motor. Shock mounting developed for rocket engines under test used as support for heavy machines, bridges, or towers.

**B83-10421****RECIPROCATING LINEAR ELECTRIC MOTOR**

M. P. GOLDSKY (U.S. Phillips Corp.)

Apr. 1984

**GSC-12773****Vol. 8, No. 1, P. 108**

Features include structural simplicity and good force/displacement characteristics. Reciprocating motor has simple, rugged construction, relatively low reciprocating weight, improved power delivery, and improved force control. Wear reduced by use of magnetic bearings. Intended to provide drivers for long-lived Stirling-cycle cryogenic refrigerators, concept has less exotic applications, such as fuel pumps.

**B83-10422****SEGMENTED TUBULAR SEAT SPRINGS**

L. A. HASLIM

Apr. 1984

**ARC-11349****Vol. 8, No. 1, P. 110**

Low-cost seat cushion made with rows of hoop springs. Springs formed from elliptical tubes by cutting most of way through on planes perpendicular to cylindrical axis. Tubular spring simplifies construction and reduce cost of seat cushions in vehicles and furniture.

**B83-10423****AIR GUIDE FOR SHEET-METAL GRINDER**

T. HEERMANN (Rockwell International Corp.)

Apr. 1984

**MFS-19788****Vol. 8, No. 1, P. 111**

Tool attachment reduces heat distortion of sheet. Air-guide attachment directs air from grinder motor to grinding wheel and metal sheet being ground. Cooling air reduces thermal distortion of workpiece due to localized frictional heating. Particularly useful when grinding sheet metal.

**B83-10424****METERING BAFFLE FOR TURBINE-BLADE COOLING**

R. MOORE (Pratt &amp; Whitney Aircraft Group), D. E. PAULUS (Pratt &amp; Whitney Aircraft Group), and T. S. RACKLEY (Pratt &amp; Whitney Aircraft Group)

Apr. 1984

**MFS-25849****Vol. 8, No. 1, P. 112**

Mixing losses due to excessive film cooling reduced. Turbine blade or vane cooled by gas or liquid flowing through holes to exterior airfoil surface. Metering baffle inside airfoil controls flow to each row of cooling holes. Resulting surface-film flow keeps airfoil cool enough to operate in high-heat, high pressure turbines.

**B83-10425****CONVECTION-COOLED TURBINE AIRFOILS**

D. E. PAULUS (Pratt &amp; Whitney Aircraft Group)

Apr. 1984

**MFS-25848****Vol. 8, No. 1, P. 112**

Coolant channels close to surface ensure efficient heat transfer. Advanced convection-cooled airfoil consists essentially of metal cover on grooved support structure. Grooves form coolant passages oriented in any direction. After cover material is applied, filler material removed from coolant passages form conduit for heat transfer fluid.

**B83-10426****ANTIVORTEX INLET RIBS FOR FLUID-SEALS**

W. C. CHEN (Rockwell International Corp.), R. F. BEATTY (Rockwell International Corp.), and E. D. JACKSON (Rockwell International Corp.)

Apr. 1984

**MFS-19793****Vol. 8, No. 1, P. 113**

Instability in rotating machinery reduced. Ring of ribs fastened to existing stator in turbopump pressure-seal inlet.

## 07 MACHINERY

Ribs suppress swirl in flow entering seal. Rib concept offers relatively inexpensive solution to some lateral-instability problems in many other systems with rotating pressure seals.

**B83-10427**

### **BALL-AND-SOCKET-BEARING WEAR TEST**

W. G. GRAHAM (Rockwell International Corp.)

Apr. 1984

**MFS-19737**

**Vol. 8, No. 1, P. 114**

Series of experiments to measure wear life of spherical bearing summarized. Report designed to establish clearance, contour, finish, and lubricant parameters for highly-loaded, compact plain spherical bearing. Information useful in design of bearings for helicopter control linkages, business machines, nuclear reactor, and rotor bearings.

**B83-10428**

### **BEARING WEAR IN LARGE THERMAL GRADIENTS**

J. W. KANNEL (Battelle Columbus Laboratories)

Apr. 1984

**MFS-25879**

**Vol. 8, No. 1, P. 115**

Report presents results of study of bearing distress resulting from malfunction of spring-preloading arrangements. Study examined effect of thermal growth on wear depth of bearing. Report considers bearing-failure modes, relationships between growth and wear, maximum stresses as function of load, and effect of thermal growth on spring-load deflections.

**B83-10429**

### **CLAMP FOR ATTACHING EQUIPMENT TO AN I-BEAM**

K. H. CLARK

Apr. 1984

**MFS-25510**

**Vol. 8, No. 1, P. 115**

Quick-connect/disconnect clamp attaches instruments or equipment to I-beam, or similar flanged structures, without use of tools or much force.

**B83-10430**

### **CONTINUOUS MINING MACHINE**

T. KNUROVSKY (Caltech) and J. KISKIS (Caltech)

Apr. 1984

**NPO-15164**

**Vol. 8, No. 1, P. 115**

Mining machine contains two maneuverable drums for cutting coal and rock intrusion in coal seam.

**B83-10431**

### **ROOF SUPPORT NEAR COAL-MINING FACE**

T. KNUROVSKY (Caltech), J. P. KISKIS (Caltech), and G. SIEGEL (Caltech)

Apr. 1984

**NPO1-15165**

**Vol. 8, No. 1, P. 115**

Hydraulically-powered legs mounted on crawlers and carrying sections of conveyors provide roof support close to working face and above workspace at all times.

**B83-10432**

### **BIDIRECTIONAL CONTINUOUS COAL MINER**

T. KNUROVSKY (Caltech), J. P. KISKIS (Caltech), and J. HARRIS (Caltech)

Apr. 1984

**NPO-15166**

**Vol. 8, No. 1, P. 116**

Continuous mining machine cuts coal in both directions of travel eliminating downtime caused by retreating across face to start new cut.

**B83-10433**

### **MINER FOR CUTTING ENTRY PASSAGES IN COAL SEAMS**

T. KNUROVSKY (Caltech) and J. KISKIS (Caltech)

Apr. 1984

**NPO-15167**

**Vol. 8, No. 1, PP. 116**

Coal mining machine cuts swath wider than itself and cuts entry passages into coal seam in one pass.

**B83-10434**

### **DRILLING HOLES ON A LARGE BOLT CIRCLE**

R. A. HIBDON (Boeing Services International)

Apr. 1984

**KSC-11115**

**Vol. 8, No. 1, P. 116**

Special machine tool creates circle of holes spaced and bored to accuracy of few thousandths of an inch.

**B83-10435**

### **TOOL FOR TAKING CLAY IMPRESSIONS**

R. S. DUNCAN (Rockwell International Corp.)

Apr. 1984

**MFS-19728**

**Vol. 8, No. 1, P. 116**

Clay impression of small parts taken with tool consisting of hollow tube closed at one end. Slots at other end admit part short distance into tube. Impression used to make silicone rubber mold for examination.

**B83-10436**

### **TOOL FOR TIGHTENING BOLTS WITH KNURLED HEADS**

J. G. SMITH and W. A. WALL

Apr. 1984

**MFS-25694**

**Vol. 8, No. 1, P. 116**

Modified clamp transfers torque to bolthead. Readily-available springloaded clamp modified, transfers measured torque to bolt with knurled head.

**B83-10437**

### **DAMPING SEALS FOR TURBOMACHINERY**

G. L. VON PRAGENAU

Apr. 1984

**MFS-25834**

**Vol. 8, No. 1, P. 117**

Seals with rough surfaces proposed for stabilizing shaft motion and preventing leakage along shaft in machines such as turbopumps. Applicable to turbomachinery with speed limits raised and bearing life extended, avoiding costly shutdowns.

**B83-10438**

### **CONTROLLING SANDING DEPTH**

C. E. FLOWERS (Rockwell International Corp.)

Apr. 1984

**MFS-19713**

**Vol. 8, No. 1, P. 117**

Sander mounted on traversing mechanism moved toward or away from workpiece by screw drive. Depth of sanding and position of sander on work is reliably controlled.

**B83-10439**

### **MEASURING RECESSED PINS**

C. KOSTAS (Rockwell International Corp.) and W. PARKER (Rockwell International Corp.)

Apr. 1984

**MFS-19673**

**Vol. 8, No. 1, P. 117**

Sleeve-and-rod-tool measures distances in blind locations. Developed for measuring small distance from top of pin to body holding it.

**B83-10440**

### **LOCK FOR TUBE FITTINGS**

L. A. HEIN and W. N. MYERS

Apr. 1984

**MFS-25964**

**Vol. 8, No. 1, P. 117**

Attachment for nuts of tube fittings locks fittings securely. Attachment includes covers for nut on tube fitting and nut on boss fitting.

**B83-10441**

### **TEST-BENCH DYNAMOMETER**

G. S. PERKINS (Caltech)

Apr. 1984

**NPO-15084**

**Vol. 8, No. 1, P. 117**

Test bench confirms operating characteristics of motors and drive mechanisms.

**B83-10442**

### **BEARING MEASURING FIXTURE**

W. D. MASON (Rockwell International Corp.)  
Apr. 1984

**MFS-19315** Vol. 8, No. 1, P. 117  
Tool serves accurate base for making critical measurement of large bearing such as those in turbopumps.

**B83-10443**  
**STRIPPER FOR CABLES OF ANY CROSS SECTION**  
J. O. LONBORG (Caltech)

Apr. 1984  
**NPO-15631** Vol. 8, No. 1, P. 118  
New wire stripper removes insulation from cable with noncircular cross sections as well as circular cross sections.

**B83-10444**  
**STAGING TWO-PHASE TURBINES**  
D. G. ELLIOTT (Caltech)

Apr. 1984  
**NPO-15037** Vol. 8, No. 1, P. 118  
Staging method solves problem of friction loss and low efficiency of two phase (liquid/gas) flow in turbines by using high blade-tip speeds in first stage for progressively lower tip speeds in succeeding stages.

**B83-10445**  
**LOW-CONTAMINATION VIBRATING FEEDER FOR SILICON CHIPS**

B. H. MACKINTOSH (Mobil Tyco Solar Energy Corp.)  
Apr. 1984  
**NPO-15128** Vol. 8, No. 1, P. 118  
Vibratory feeding is method of controlling flow of small oddly shaped particles. Technique applied to other materials that require contamination control by feeding material through vibrating troughs topped by particular material.

**B83-10446**  
**SELF-LOCATING LATCH**  
J. GIBSON and J. CALVERT

Apr. 1984  
**MFS-25956** Vol. 8, No. 1, P. 118  
New latch secures fitting without displacing fitting and without regard to where on latch fitting makes initial contact.

**B83-10447**  
**TORQUE-WRENCH EXTENSION ARM**  
T. J. PACALA (Caltech), D. D. TRUJILLO (Caltech), and J. B. LAUDENSLAGER (Caltech)

Apr. 1984  
**NPO-15495** Vol. 8, No. 1, P. 118  
Torque-wrench extension arm makes possible to apply torque to bolt, screw, or nut inaccessible to conventional wrenches or in areas where wrench cannot be manipulated. Used in narrow pockets and behind panels and walls.

**B83-10656**  
**LOW-VIBRATION OSCILLATING COMPRESSOR**  
P. A. STUDER

Nov. 1984  
**GSC-12799** Vol. 8, No. 2, P. 253  
Oscillating compressor momentum compensated: produces little vibration in its supporting structure. Compressor requires no lubrication and virtually free of wear. Compresses working fluids such as helium, nitrogen or chlorofluorocarbons for Stirling-cycle refrigeration or other purposes. Compressor includes two mutually opposed ferromagnetic pistons of same shape and mass. Electromagnetic flux links both pistons, causing magnetic attraction between them.

**B83-10659**  
**VERTICAL-CONTROL SUBSYSTEM FOR AUTOMATIC COAL MINING**

W. R. GRIFFITHS (Miller Associates, Inc.), M. SMIRLOCK (Miller Associates, Inc.), J. APLIN (Miller Associates, Inc.), R. B. FISH (Miller Associates, Inc.), and D. FISH (Miller Associates, Inc.)  
Nov. 1984

**MFS-25811** Vol. 8, No. 2, P. 254

Guidance and control system automatically positions cutting drums of double-ended longwall shearer so they follow coal seam. System determines location of upper interface between coal and shale and continuously adjusts cutting-drum positions, upward or downward, to track undulating interface. Objective to keep cutting edges as close as practicable to interface and thus extract as much coal as possible from seam.

**B83-10660**  
**TRANSPORTABLE PUMPS COULD SAVE OIL CARGOES**  
R. BURNS (IMA Resources, Inc.)

Nov. 1984  
**MFS-25881** Vol. 8, No. 2, P. 255  
Transportable pumps designed for firefighting used to salvage crude oil from tankships leaking, burning, or grounded. Pump incorporated into self-contained transportable module along with engine and controls. Module carried by helicopter, boat, or van to site of fire provides large quantities of water at high pressure in firefighting mode or pump oil into barge in salvage mode.

**B83-10661**  
**MEMORY-METAL ELECTROMECHANICAL ACTUATORS**  
C. F. RUOFF (CALTECH)

Nov. 1984  
**NPO-15960** Vol. 8, No. 2, P. 256  
Electrically controlled actuator produces predetermined force, torque, or displacement without motors, solenoids, or gears. Using memory-metal elements, actuator responds to digital input without electronic digital-to-analog conversion. To prevent overheating and consequent loss of hofformed shape, each element protected by thermostat turns off current when predetermined temperature is exceeded. Memory metals used to generate fast mechanical response to electric signals.

**B83-10662**  
**DESIGNING MORE-EFFICIENT SPUR GEARS**  
S. H. LOEWENTHAL and N. E. ANDERSON (U.S. Army Aviation Research and Development Command)

Nov. 1984 See Also (NASA TM-81426 and NASA TM-81625)  
**LEW-13921** Vol. 8, No. 2, P. 257  
Relatively simple method to calculate spur-gear system power loss for wide range of gear geometries and operating conditions developed. Method used to determine design requirements for efficient gearset. Effects of spur-gear size, pitch, ratio, pitch-line velocity and load on efficiency readily predictable with method. Analysis uses simple algebraic expressions to determine gear sliding, rolling, and windage losses and incorporates approximate ball-bearing power-loss expression. Predicted results show good agreement with published data.

**B83-10663**  
**TUBE ALINEMENT FOR MACHINING**  
J. GARCIA (Rockwell International Corp.)

Nov. 1984  
**MFS-19719** Vol. 8, No. 2, P. 258  
Tool with stepped shoulders aligns tubes for machining in preparation for welding. Alinement with machine tool axis accurate to within 5 mils (0.13mm) and completed much faster than visual setup by machinist.

**B83-10664**  
**CONTROLLING THE FOCUS IN ELECTRON-BEAM WELDERS**

D. I. MACFARLANE (Rockwell International Corp.) and K. W. SPIEGEL (Rockwell International Corp.)  
Nov. 1984

**MFS-19814** Vol. 8, No. 2, P. 259  
Detector using two whirling wires measures focus of beam in electronbeam welder. Multiple-wire beam-sampling method provides for simple nullmeter focus indication easily

## 07 MACHINERY

controlled by operator. Detector not only operates at high beam currents but eliminates need for oscilloscope.

**B83-10666**

### REUSABLE RELEASE MECHANISM

J. W. BUNKER (TransTechnology Corp.) and R. S. RITCHIE (TransTechnology Corp.)

Nov. 1984

**MSC-20080**

**Vol. 8, No. 2, P. 261**

Slider release mechanism reusable. Bears heavy loads while latched, yet gives smooth release motion. Release effected by explosively driving perpendicular slider out of engagement with load-bearing shank. Device has potential industrial applications such as emergency release of lifting cables from helicopters, cranes and hoists.

**B83-10667**

### INSTALLATION/REMOVAL TOOL FOR SCREW-MOUNTED COMPONENTS

J. P. ASH (Rockwell International Corp.)

Nov. 1984

**MSC-20606**

**Vol. 8, No. 2, P. 261**

Tweezerlike tool simplifies installation of screws in places reached only through narrow openings. With changes in size and shape, basic tool concept applicable to mounting and dismantling of transformers, sockets, terminal strips and mechanical parts. Inexpensive tool fabricated as needed by bending two pieces of steel wire. Exact size and shape selected to suit part manipulated and nature of inaccessible mounting space.

**B83-10668**

### FEEDBACK CONTROL OF ROTOR OVERSPEED

G. B. CHURCHILL

Nov. 1984

**ARC-11404**

**Vol. 8, No. 2, P. 262**

Feedback system for automatically governing helicopter rotor speed promises to lessen pilot's workload, enhance maneuverability, and protect airframe. With suitable modifications, concept applied to control speed of electrical generators, automotive engines and other machinery.

**B83-10669**

### DOUBLE-POPPET VALVE

W. C. HUBER

Nov. 1984

**MSC-20627**

**Vol. 8, No. 2, P. 263**

New valve design includes two poppet/seat combinations actuated simultaneously. If one fails, other continues to seal against fluid flow. Valve primarily useful for handling dangerous fluids and lighter and more compact than comparable redundant-valve systems used at present.

**B83-10670**

### TRIPLE-SEAL VALVE

W. C. HUBER

Nov. 1984

**MSC-20628**

**Vol. 8, No. 2, P. 265**

Handling of poisonous, flammable, or corrosive fluids made safer by new triple-seal valve concept. Three valves assembled in series, with stem mechanism for one valve serving as body of next valve. New design lighter and more compact than conventional three-series-valve combinations used with hazardous fluids.

**B83-10671**

### SPHERICAL-BEARING ANALYSIS PROGRAM

R. J. KLECKNER (SKF Industries)

Nov. 1984

**LEW-13626**

**Vol. 8, No. 2, P. 265**

Computer program SPHERBEAN, developed to predict thermomechanical performance characteristics of double-row spherical roller bearings over wide range of operating conditions. Analysis allows six degrees of freedom for each roller and three for each half of an optionally split cage. Program capabilities provide sufficient generality to allow

detailed simulation of both high-speed and conventional bearing operation.

**B83-10672**

### DEPTH GAGE FOR THREADED HOLES

M. A. KAHN (Rockwell International Corp.)

Nov. 1984

**MFS-19884**

**Vol. 8, No. 2, P. 266**

Tool for measuring threaded depth of tapped holes accurate and easy to use. Depth read from graduated scale on tool. Gives direct reading of depth, eliminating estimates and calculations. When tool is removed from hole, spring-loaded sleeve returns to zero.

**B83-10673**

### STALLED-FLOW AND HEAD-LOSS MODEL FOR DIFFUSER PUMPS

S. Y. MENG (Rockwell International Corp.)

Nov. 1984

**MFS-19748**

**Vol. 8, No. 2, P. 266**

Modeling procedure approximates inlet transition zone (blade leading edge to blade throat) of diffuser pump as two-dimensional cascade, properties of which are well known. Model applied to stators as well as rotors. Procedure much faster than previous methods.

**B83-10674**

### RETENTION MECHANISM FOR SPINNING OBJECTS

R. A. CLOYD

Nov. 1984

**MFS-25957**

**Vol. 8, No. 2, P. 266**

Mechanism enables controlled release of two rotating objects. Mechanism applicable to some kinds of motor starters, drive shafts, or other drive systems released while rotating.

**B83-10675**

### MINIATURE ROTATOR

C. C. NEIL (RCA Corp.)

Nov. 1984

**LAR-12765**

**Vol. 8, No. 2, P. 267**

Device for making small, precise rotation of objects in cramped spaces consists of V-groove machined in block of aluminum (or nylon) and flat, slotted bar clamped across groove. Device used to rotate lenses until in precise alignment with optical axis of injection laser.

**B83-10676**

### PREVENTING MOTOR DAMAGE DUE TO RAPID REVERSAL

R. FETTERS (Rockwell International Corp.)

Nov. 1984

**MFS-19702**

**Vol. 8, No. 2, P. 267**

Reversal switch takes more time to operate, allows gentler deceleration before reversal. Switch requires both twisting and pulling motion, giving motor time to decelerate gradually.

**B83-10677**

### A ONE-HAND NUT AND BOLT ASSEMBLY TOOL

J. M. SPENCER (Rockwell International Corp.)

Nov. 1984

**MFS-19691**

**Vol. 8, No. 2, P. 267**

Special wrench speeds nut and bolt assembly when insufficient room to hold nut behind bothole with standard tool. C-clamp shaped box-and-socket-wrench assembly holds nut on blind side in alignment to receive bolt from open side.

**B83-10678**

### PORTABLE POWER BROACH

A. J. APPLETON (Rockwell International Corp.)

Nov. 1984

**MFS-19679**

**Vol. 8, No. 2, P. 267**

Tool hand-held version of larger stationary broaching machines. Equipped with fittings and hoses to connect to

power source, small enough to be carried in field or used in confined spaces.

**B83-10679**

**PRESSURE-DRIVEN WATERFLOW CLEANING DEVICE**  
R. RHEA (Rockwell International Corp.) and M. GANTS (Rockwell International Corp.)

Nov. 1984

**MFS-19638****Vol. 8, No. 2, P. 267**

High-Pressure gas mixed with water effective cleaner. Expanding gas bubbles in jet give more vigor to liquid. Fluid agitation effectively used to clean small, normally inaccessible cavity or passage.

**B83-10680**

**TEMPORARY SEALING OF CAVITIES FOR LEAK TESTING**

J. LITTLE (Rockwell International Corp.)

Dec. 1984

**MFS-19646****Vol. 8, No. 2, P. 267**

Wax Seals cavity openings to permit helium leak test of cavity welds. Technique facilitates leak testing of cavities in components of larger systems not otherwise sealed off at time leak testing done.

**B83-10681**

**TRANSFORMER AND METER TESTER**

R. M. STOMS (Rockwell International Corp.)

Nov. 1984

**MFS-19708****Vol. 8, No. 2, P. 267**

Numerically-controlled 5-axis machine tool uses transformer and meter to determine and indicate whether tool is in home position, but lacks built-in test mode to check them. Tester makes possible test, and repair of components at machine rather than replace them when operation seems suspect.

**B83-10682**

**HYDRAULIC TUBE EXPANDER**

R. K. BURLEY (Rockwell International Corp.)

Nov. 1984

**MFS-19731****Vol. 8, No. 2, P. 268**

Portable hydraulic tube expander expands small, thick-walled tubes in hard-to-reach locations. Tool particularly useful in situations where mechanical expander too fragile to produce desired expansion.

**B83-10683**

**BURNER-INJECTOR-POST TIP**

W. R. WAGNER (Rockwell International Corp.) and R. SAXELBY (Rockwell International Corp.)

Nov. 1984

**MFS-19827****Vol. 8, No. 2, P. 268**

Bimetallic tips attached to injector posts improve burner performance and reliability. Tip allows excess heat generated at tip to be dissipated circumferentially and axially through thermal conduction.

**B83-10684**

**ATTACHING CHUCK KEYS TO MACHINE TOOLS**

V. RICHARDSON (Boeing Services International)

Nov. 1984

**KSC-11249****Vol. 8, No. 2, P. 269**

Chuck keys attached to portable machine tools by retracting lanyards. Lanyard held taut by recoil caddy attached to tool base. Chuck key available for use when needed and safely secured during operation of tool.

**B83-10685**

**RETROFITTING VIBRATION DAMPERS**

T. C. ADAMS (Rockwell International Corp.) and J. PREMYSL (Rockwell International Corp.)

Nov. 1984

**MFS-19790****Vol. 8, No. 2, P. 268**

Method of installing support tubes allows retrofitting of vibration-reducing elements. Tubes deform elastically as

inserted and expand partially as gap becomes wider. Force-fit tubes eliminate fatigue problem.

**B83-10686**

**WIRE ELECTRICAL-DISCHARGE MACHINING AID**

T. GOLLIHUGH (Rockwell International Corp.)

Nov. 1984

**MFS-19643****Vol. 8, No. 2, P. 268**

Rerouting cutting wire by adding idler rollers allows standard wire electrical-discharge machine (WEDM) temporarily modified to permit some types of cuts otherwise blocked.

**B83-10687**

**MOTORIZED CRYOGENIC VALVE**

L. SALERNO, J. VORREITER, Y. MATSUMOTO, W. VAN ARK, and A. SPIVAK (Transbay Electronics, Inc.)

Nov. 1984

**ARC-11452****Vol. 8, No. 2, P. 268**

Remotely-controlled cryogenic valve operates over temperature range from room temperature to 2 K. Valve used in helium dilution refrigerators, cryostats and adiabatic-demagnetization refrigerators.

**08 FABRICATION TECHNOLOGY****B83-10105**

**CURVED CAPS RAISE CORRUGATION STRENGTH**

R. C. DAVIS, T. T. BALES, D. M. ROYSTER, and L. R. JACKSON

Aug. 1983

**LAR-12884****Vol. 7, No. 3, P. 341**

Construction concept increases strength-to-weight ratio of corrugated panels. Flat caps are replaced by curved caps in new concept for constructing corrugated panels. Geometry utilizes curved cap for wider cap/web attachment. Beading web prevents local buckling in web while allowing maximum separation between cap strips. Geometry offers significant weight saving over conventional geometry for wide range of loading.

**B83-10106**

**SOLAR-CELL SLIDE RULE**

K. A. YAMAKAWA (CALTECH)

Aug. 1983

**NPO-15646****Vol. 7, No. 3, P. 342**

Slide rule relates efficiency, impurity types, impurity concentrations, and process types. Solar cell slide rule calculations are determination of allowable impurity concentration for nonredistributive process, determination of impurity buildup factor for redistributive process and determination of allowable impurity concentration for redistributive process.

**B83-10107**

**ULTRASONICS AND OPTICS WOULD CONTROL SHOT SIZE**

A. D. MORRISON (CALTECH)

Aug. 1983

**NPO-15608****Vol. 7, No. 3, P. 343**

Feedback system assures production of silicon shot of uniform size. Breakup of silicon stream into drops is controlled, in part, by varying frequency of vibrations imparted to stream by ultrasonic transducer. Drop size monitored by photodetector. Control method particularly advantageous in that constant size is maintained even while other process variables are changed deliberately or inadvertently. Applicable to materials other than silicon.

## 08 FABRICATION TECHNOLOGY

**B83-10108**

### **REINFORCEMENT FOR STRETCH FORMED SHEET METAL**

J. B. LEA (Vought Corp.) and C. R. BAXTER (Vough Corp.)  
Aug. 1983

**MSC-20228**

**Vol. 7, No. 3, P. 343**

Tearing of aluminum sheet metal during stretch forming prevented by flame spraying layer of aluminum on edges held in stretch-forming machine. Technique improves grip of machine on metal and reinforced sheet better able to withstand concentration of force in vicinity of grips.

**B83-10109**

### **HOT-MELT ADHESIVE ATTACHMENT SYSTEM**

R. L. FOX, A. W. FRIZZELL, B. D. LITTLE, D. J. PROGAR, R. H. COULTRIP, R. H. COUCH, B. A. STEIN, J. D. BUCKLEY, T. L. ST. CLAIR, and J. R. GLEASON (AVRAD-COM)

Aug. 1983

**LAR-12894**

**Vol. 7, No. 3, P. 344**

Adhesive system is as effective on Earth as in space. Fiberglass cloth mounted in head assembly. When adhesive reaches melt temperature head is attached to metals composites, ceramics, and other materials. Once attached, head cooled rapidly for quick stick. Used to tether tools or attach temporary scaffolding to walls, buildings, or beams.

**B83-10110**

### **HIGH-ABSORPTANCE RADIATIVE HEAT SINK**

T. CAFFERTY (Hughes Aircraft Co.)

Aug. 1938

**GSC-12739**

**Vol. 7, No. 3, P. 345**

Absorptance of black-painted open-cell aluminum honeycomb improved by cutting honeycomb at angle or bias rather than straight across. This ensures honeycomb cavities escapes. At each reflection radiation attenuated by absorption. Applications include space-background simulators, space radiators, solar absorbers, and passive coolers for terrestrial use.

**B83-10111**

### **REWATERPROOFING SILICA TILES**

L. J. LLEGER and D. C. WADE

Aug. 1983

**MSC-20340**

**Vol. 7, No. 3, P. 345**

Waterproofing agent, vaporized in bubbler transported by gas flowing in system and deposits in pores of tiles. Vapor carried through hole of approximately 1/16 inch (1.6mm) diameter made in tile coating. Technique used to waterproof buildups (concrete and brick) and possibly fabrics.

**B83-10112**

### **GAS-JET MENISCUS CONTROL IN RIBBON GROWTH**

J. A. ZOUTENDYK (CALTECH) and O. VONROOS (CALTECH)

Aug. 1983

**NPO-14978**

**Vol. 7, No. 3, P. 347**

Gas jet used to control shape of meniscus and thus to regulate ribbon thickness in vertical silicon-ribbon growth. Gas jet also cools ribbon, increasing maximum possible pull speed for silicon, contact angle of 11 degrees plus or minus 1 degree required for constant thickness ribbon growth. Cooling effect of gas jet increases maximum possible pull speed.

**B83-10113**

### **ATTITUDE CONTROL BY LOCALIZED OUTGASSING**

D. D. ELLEMAN (CALTECH), T. G. WANG (CALTECH), and A. CROONQUIST (CALTECH)

Aug. 1983

**NPO-15575**

**Vol. 7, No. 3, P. 347**

Attitude control of levitated object achieved by using laser to vaporize selectively sublimate coating. Laser heats material that will sublime or outgas. To obtain torque reaction force vector from subliming material must not pass through

center-of-mass of object. Laser provides beam suitable for controlling objects in noncontact manufacturing processes in acoustic levitation chambers.

**B83-10114**

### **MORE-UNIFORM HEAT CURING FOR STRUCTURAL REPAIRS**

P. E. BAUER (McDonnell Douglas Corp.) and M. A. WALKER

Aug. 1983

**MSC-20101**

**Vol. 7, No. 3, P. 348**

Copper lining helps to distribute heat under heating blanket. Bond during setup employs heating blanket over copper sheet within vacuum bag. Copper sheet smoothes out temperature distribution under hotspots in heater. Method applicable to uniformly heating such low-thermal-conductivity metals as titanium or stainless steel.

**B83-10115**

### **FABRICATION OF GRAPHITE/EPOXY COLUMN ELEMENTS**

R. M. BLUCK (Lockheed Missiles & Space Co., Inc.), G. H. GROTBECK (Lockheed Missiles & Space Co., Inc.), and W. M. REIGHARD (Lockheed Missiles & Space Co., Inc.)

Aug. 1983

**LAR-12915**

**Vol. 7, No. 3, P. 348**

Dimensionally precise columns wound on vertical mandrels. Dry fiber wound on tapered aluminum mandrel and outer sleeve. Winding and injection done at elevated temperature to minimize thermal-expansion problems during curing of resin. Technique used in textile industry.

**B83-10116**

### **LOW-WEIGHT INSERTS FOR ALUMINUM HONEYCOMB PANELS**

G. S. BUMGARNER (Vought Corp.) and M. W. REED (Vought Corp.)

Aug. 1983

**MSC-20227**

**Vol. 7, No. 3, P. 349**

Fiber/epoxy composites used in place of solid aluminum. New proposal suggests to make inserts out of such lightweight, high strength materials as fiber/epoxy composites or high density aluminum honeycomb. Composite insert is same size and shape as aluminum insert it replaces.

**B83-10117**

### **ACOUSTICAL-LEVITATION CHAMBER FOR METALLURGY**

M. B. BARMATZ (CALTECH), E. TRINH (CALTECH), T. G. WANG (CALTECH), D. D. ELLEMAN (CALTECH), and N. JACOBI (CALTECH)

Aug. 1983

**NPO-15453**

**Vol. 7, No. 3, P. 350**

Sample moved to different positions for heating and quenching. Acoustical levitation chamber selectively excited in fundamental and second-harmonic longitudinal modes to hold sample at one of three stable positions: A, B, or C. Levitated object quickly moved from one of these positions to another by changing modes. Object rapidly quenched at A or C after heating in furnace region at B.

**B83-10118**

### **ACOUSTIC LEVITATION WITH LESS EQUIPMENT**

M. B. BARMATZ (CALTECH) and N. JACOBI (CALTECH)

Aug. 1983

**NPO-15562**

**Vol. 7, No. 3, P. 350**

Certain chamber shapes require fewer than three acoustic drivers. Levitation at center of spherical chamber attained using only one acoustic driver. Excitation of lowest spherical mode produces asymmetric acoustic potential well.

**B83-10119**

### **PULL TEST VERIFIES GAP LOADING**

G. R. HAGEN (Rockwell International Corp.)

Aug. 1983

**MSC-20231**

**Vol. 7, No. 3, P. 352**

Thin plastic strip pulled away from gap by force gage

to measure pressure applied on gap filler. Force necessary to initiate movement of thin plastic strip is measure of gap tightness. Procedure determines interface pressures or loads where conventional load-measuring equipment cannot be used. Used to check refrigerator-door seals.

**B83-10120****ANNEALING SOLAR CELLS WITH LASERS**

J. S. KATZEFF (Lockheed Missiles & Space Co.) and M. LOPEZ

Aug. 1983

NPO-15694

Vol. 7, No. 3, P. 352

Laser anneals silicon solar cells rapidly enough for use in production. Laser frequently doubled neodymium:yttrium-aluminum-garnet (Nd:YAG) device. 30-m-diameter spot formed by lasers covers enough area to process silicon wafers rapidly. Laser annealed cells have efficiencies greater than 15 percent.

**B83-10214****FABRICATING SLOTTED-WAVEGUIDE ARRAYS FROM SHEET METAL**

W. C. BROWN (Raytheon Co.)

Oct. 1983

NPO-15664

Vol. 7, No. 4, P. 457

Low-cost lightweight waveguides formed from rolls of aluminum. Array formed from sheared, punched, and bent aluminum sheets. Sheets aligned with punched jig holes and joined by laser-beam or resistance spot welding. Process permits use of thin metal to reduce raw material costs and mass. Also holds closer tolerances than usually attained in sheet-metal work.

**B83-10215****FORMING MIRRORS ON COMPOSITE MATERIALS**

R. E. GAULDIN (CALTECH) and K. RAMOHALLI (CALTECH)

Oct. 1983

NPO-15912

Vol. 7, No. 4, P. 458

Smooth coatings deposited on hard-to-polish substrates. Lightweight mirror, leaning against conventional glass mirror, consists of metallic reflective layer on substrate coated with polyester resin. Smooth surface of polyester resin made by covering freshly applied resin with piece of smooth glass coated with release agent.

**B83-10216****BETTER SEALS FOR VACUUM BAGS**

B. PENN and J. M. CLEMONS

Oct. 1983

MFS-25875

Vol. 7, No. 4, P. 459

Roller tool spreads even layer of adhesive. Tool easily constructed from metal, plastic, or wood. Sewing-thread spool serves as roller, nail as axle, and jigsawed block of wood as handle. Tool rolled and pressed against plastic film to assure even layer of adhesive around periphery.

**B83-10217****ABSORBABLE-SUSCEPTOR WELDING OF CERAMICS**

J. E. SCHROEDER (Caltech) and P. J. SHLICHTA (Caltech)

Oct. 1983

NPO-15640

Vol. 7, No. 4, P. 460

Susceptor becomes part of joint. Susceptor is heated to high temperature by RF energy, then melts adjacent ceramic material. Susceptor dissolves in molten ceramic. When cooled, ceramic parts form monolithic assembly. Suitable for joining complex subassemblies in heat exchangers or other ceramic process equipment for high temperatures.

**B83-10218****PREPARING SOLAR CELLS FOR SOLDERING**

J. J. HAGERTY (MB Associates)

Oct. 1983

NPO-15626

Vol. 7, No. 4, P. 461

Solder paste and contact ribbon dispensed in synchronism. Solder-paste dispenser operates on one cell at a time.

Ribbon fed up ramps and into positioned while solder paste is applied. When ramps are moved out of way, ribbon lies down onto cell.

**B83-10219****REDUCING THE RESISTANCE OF CONDUCTIVE-ADHESIVE BONDS**

L. J. GUERTIN (Rockwell International Corp.), K. L. BILLINGTON (Rockwell International Corp.), and V. R. WARD (Rockwell International Corp.)

Oct. 1983

MSC-20427

Vol. 7, No. 4, P. 462

Current pulses lower resistance of silver-filled epoxies. Capacitive discharge reduces interfacial resistance between aluminum surfaces joined with silver-filled epoxy. Technique offers noninvasive solution to problem of attaching ground-ing brackets to aluminum honeycomb structures.

**B83-10220****LIGHT, SERVICEABLE INSULATION BLANKET**

A. J. SWIRSLEY (Rockwell International Corp.)

Oct. 1983

MSC-20452

Vol. 7, No. 4, P. 462

Lightweight insulation blanket with aluminized, reinforced polyester facing resists crushing and weighs less than previous insulation blankets with textured stainless steel facing. New hook-and loop fasteners facilitate installation and removal. Useful in vehicle construction and other application in which low weight, easy removability for repairs, and long service life are important.

**B83-10221****ELECTRODEPOSITION REPAIR OF DAMAGED METAL PARTS**

M. KAUFMAN (Rockwell International Corp.) and J. RIETDYK

Oct. 1983

MFS-19783

Vol. 7, No. 4, P. 463

Damaged material replaced by electrodeposited copper. Channel restoration consists of alternately machining damaged material and reconstructing material by electrodeposition. Solid wax processed into coolant channels to provide plating surfaces that match original channel surfaces.

**B83-10222****ELECTROLYTIC SHARPENING OF DIODE-CONTACT WHISKERS**

G. GREEN (University of Virginia) and R. J. MATTAUCH (University of Virginia)

Oct. 1983

NPO-15789

Vol. 7, No. 4, P. 464

Phosphor bronze wire pointed without highly-toxic chemical reagents. Phosphor bronze wire to be pointed affixed to metal post held by fixture, such as pin vise. Fixture moved axially by micrometer allows precise control of position of end of wire with respect to surface of pointing solution. Solution consists of 4 weight percent sulfamic acid crystals in deionized water. Dissolution current adjusted via the autotransformer setting.

**B83-10223****FABRICATION OF STRUCTURAL CELLULAR GLASS**

W. D. MITCHELL (Solaramics, Inc.) and D. J. MAXWELL (Solaramics, Inc.)

Oct. 1983

NPO-15731

Vol. 7, No. 4, P. 465

Surface layer quickly heated and compressed. Postcellulation skin densification uses gas burners to heat lower surface of material and pinch rollers to compress heated-surface layer. Useful for manufacturing large low cost, parabolic dish solar collectors.

**B83-10224****POLYMER BONDING OF OPTICAL FIBERS**

W. GOSS (Caltech) and M. D. NELSON (Caltech)

Oct. 1983

## 08 FABRICATION TECHNOLOGY

**NPO-15464**

**Vol. 7, No. 4, P. 466**

Optical waveguides coupled through their sides. In fiber etching process bonded length for coupling determined by observing optical output powers in two fibers. Surface tension of etchant remaining between two fibers holds them in contact when raised from solution for power measurement. When fibers reimmersed, they separate allowing free access by etchant.

**B83-10225**

**X-RAY INSPECTION OF TRANSISTORS**

W. P. HUBBARD (Caltech)

Oct. 1983

**NPO-15675**

**Vol. 7, No. 4, P. 466**

Component holder speeds examination of matched pairs. Transistors are oriented for two perpendicular x-ray views. Second view obtained by simply flipping block around corner near components, while corner remains in contact with film. Procedure allows inspection of up to 50 pairs - two views of each pair - on single x-ray film in same time previously required for 1 unmounted pair.

**B83-10226**

**PRESSURE-REDUCTION TECHNIQUE FOR CRYSTAL GROWTH**

P. J. SHLICHTA

Oct. 1981

**NPO-15772**

**Vol. 7, No. 4, P. 467**

Large crystals grown by varying pressure rather than temperature. In constant temperature pressure-reduction process crystal growth promoted as solubility decreases by factor of more than 10. Technique used to study crystal growth kinetics by 'pressure wave' analog of conventional 'thermal wave' experiments. Technique has advantages of faster response and freedom from convective interference.

**B83-10227**

**PHASE MODULATION VARIES AVERAGE ACOUSTIC TORQUE**

D. D. ELLEMAN (Caltech), A. P. CROONQUIST (Caltech), and T. G. WANG (Caltech)

Oct. 1983

**NPO-15689**

**Vol. 7, No. 4, P. 468**

Rotation of acoustically levitated objects controlled. Phase difference alternated between +90 degrees and -90 degrees. If system is at positive phase difference during greater portion of modulation cycle than at negative phase difference (or vice versa), there is nonzero time-averaged acoustic torque.

**B83-10228**

**ELECTROSTATIC LEVITATOR WITH FEEDBACK CONTROL**

W. K. RHIM (Caltech), M. M. SAFFREN (Caltech), and D. D. ELLEMAN (Caltech)

Oct. 1983

**NPO-15553**

**Vol. 7, No. 4, P. 469**

Sample position automatically maintained. Object levitated by electrostatic field between two electrodes. Because of particular curved electrode shape, levitation field has stable horizontal position on vertical axis of symmetry. Vertical position of object sensed and compared with preset value. When position error is detected, amplitude of levitating field is increased or decreased to restore zero error. System offers options well to containerless processing.

**B83-10229**

**GAS-BEARING CRUCIBLE FOR SHOT TOWER**

C. L. YOUNGBERG (Caltech), C. G. MILLER (Caltech), J. B. STEPHENS (Caltech), and A. A. FINNERTY (Caltech)

Oct. 1983

**NPO-15070**

**Vol. 7, No. 4, P. 470**

Device protects molten drops from contamination and distortion. Gas flowing through levitator tube levitates small balls while they melt. Gas heated by filament extending through center of tube. Gas bearing crucible on tube has

concave configuration to hold single relatively large ball or many recesses to hold many small balls. By time spheres reach foam, they are cooled sufficiently by radiation to retain their shape.

**B83-10230**

**HOLLOW-SPHERE PRODUCTION LINE**

M. C. LEE (Caltech)

Oct. 1983

**NPO-15592**

**Vol. 7, No. 4, P. 471**

After initial formation, spheroids processed without contaminating touch of solid objects. Spheroid in process supported by acoustic levitation at each work station and transported between stations by combination of acoustic levitation and acoustic propulsion. Automatic sequence of target-pellet fabrication allows no contact of solid object with spheroids in process. Potential for manufacture of precise microcapsules for catalysts and medications.

**B83-10231**

**PRODUCING METALLIC GLASSES WITH ACOUSTIC LEVITATION**

M. C. LEE (Caltech) and I. A. FENG (Caltech)

Oct. 1983

**NPO-15658**

**Vol. 7, No. 4, P. 472**

Acoustic fields support and cool liquid particles. Levitated by sound energy, liquid drop in acoustic standing-wave field surrounded by acoustically-induced jet streams. Streaming gas cools drop below its freezing point in small fraction of second. Allows new amorphous alloys including 'metallic glass' to be formed.

**B83-10232**

**TEST PATTERN FOR IC'S**

T. W. GRISWOLD (Caltech) and E. T. BATES JR. (Caltech)

Oct. 1983

**NPO-15648**

**Vol. 7, No. 4, P. 473**

Random-fault densities measured in array of standard structures. Test pattern is array of standard circuit elements built into circuit chip along with, or in lieu of, integrated circuit objective process. Measurements on ray made and interpreted so fabrication process can be corrected as necessary.

**B83-10233**

**QUALITY-PLANNING-REQUIREMENTS DOCUMENTS**

P. A. LEONARD (Rockwell International Corp.) and A. FLORES (Rockwell International Corp.)

Oct. 1983

**MSC-20280**

**Vol. 7, No. 4, P. 474**

Report outlines planning procedures used in establishing inspection and quality assurance activities required of contractors constructing and testing Space Shuttle and ground-support equipment. Report useful to contractors establishing inspection points in commercial manufacturing operations.

**B83-10234**

**STUDIES OF THE INVERTED MENISCUS DEPOSITION OF SILICON ON CERAMIC**

J. D. ZOOK (Honeywell, Inc.), B. GRUNG (Honeywell, Inc.), S. B. SCHULDT (Honeywell, Inc.), F. M. SCHMIT (Honeywell, Inc.), and J. D. HEAPS (Honeywell, Inc.)

Oct. 1983

**NPO-15602**

**Vol. 7, No. 4, P. 474**

Controlled temperature profiles essential to production of solar cells. Studies of inverted meniscus process for depositing silicon coatings on ceramic substrates described in new report. When fully developed, processed used to manufacture low-cost solar photovoltaic cells.

**B83-10235**

**POLYMERIC APPLICATIONS IN ELECTRONICS**

W. S. READ (Caltech)

Oct. 1983

**NPO-16081**

**Vol. 7, No. 4, P. 475**

Training manual shows how to use polymeric materials in fabrication electronic components. Report discusses polymeric applications in fabrication of electronic components and equipment. Intended as training manual for 6-day quality assurance and technician certification course in use of polymeric materials.

**B83-10236**  
**LOW-COST ALTERNATIVES IN HYBRID MICROCIRCUIT PACKAGING**

S. V. CARUSO (Rockwell International Corp.), V. L. CHAMPION (Rockwell International Corp.), R. N. BASSETT (Rockwell International Corp.), and J. N. GAYER (Rockwell International Corp.)

Oct. 1983

**MFS-25809** Vol. 7, No. 4, P. 475

Adhesive sealing, nickel plating, and multiwire boards evaluated. Based on study involving fully developed hardware, report considers adhesive packaging instead of seam welding, nickel-plated Kovar (commercial Fe/Ni/Co alloy) packages instead of gold plates ones, and multiwire circuit boards instead of multilayer boards as alternatives for reducing cost of hardware without reducing reliability.

**B83-10237**  
**THERMAL MODELING OF BRIDGMAN CRYSTAL GROWTH**

E. COTHRAN

Oct. 1983

**MFS-27003** Vol. 7, No. 4, P. 475

Heat Flow modeled for moving or stationary rod shaped sample inside directional-solidification furnace. Program effectively models one-dimensional heat flow in translating of motionless rod-shaped sample inside of directional-solidification furnace in which adiabatic zone separates hot zone and cold zone. Applicable to systems for which Biot numbers in hot and cold zones are less than unity.

**B83-10448**  
**LIGHTWEIGHT METAL MIRRORS**

E. GOSSETT (Hughes Aircraft Co.) and P. WINSLOW (Hughes Aircraft Co.)

Apr. 1984

**GSC-12743** Vol. 8, No. 1, P. 121

Two 'eggcrate' halves brazed together. Lightweight flat mirrors fabricated by machining pockets in two plates of beryllium and brazing machined halves together. Mirror less than half weight of same mirror made by previous design.

**B83-10449**  
**FOIL PANEL MIRRORS FOR NONIMAGING APPLICATIONS**

D. J. KUYPER (Hughes Aircraft Co.) and A. A. CASTILLO (Hughes Aircraft Co.)

Apr. 1984

**GSC-12751** Vol. 8, No. 1, P. 122

Large durable, lightweight mirrors made by bonding thick aluminum foil to honeycomb panels or other rigid, flat backings. Mirrors suitable for use as infrared shields, telescope doors, solar-furnance doors, advertising displays, or other reflectors that require low thermal emissivity and high specularly but do not require precise surface figure necessary for imaging.

**B83-10450**  
**HANDLING FIXTURE FOR SOLAR-CELL ARRAYS**

P. A. DILLARD (Lockheed Missiles & Space Co., Inc.) and D. W. HIGBEE (Lockheed Missiles & Space Co., Inc.)

Apr. 1984

**NPO-15908** Vol. 8, No. 1, P. 123

Thin cells processed and stored safely. Major parts of handling fixture hold components of solar cell array modules safely, yet allow assembly process to proceed without interference. Fixture used with or without internal vacuum.

Concept allows handling of thin, relatively-fragile cells, and offers potential for savings in silicon material and cost.

**B83-10451**  
**BETTER THERMAL INSULATION IN SOLAR-ARRAY LAMINATORS**

D. R. BURGER (Caltech) and J. F. KNOX (Caltech)

Apr. 1984

**NPO-15925** Vol. 8, No. 1, P. 124

Glass marbles improve temperature control. Modified vacuum laminator for photovoltaic solar arrays includes thermal insulation made of conventional glass marbles. Marbles serve as insulation for temperature control of lamination process at cure temperatures as high as 350 degrees F. Used to replace original insulation made of asbestos cement.

**B83-10452**  
**EDGE SUPPORTS FOR PHOTOVOLTAIC MODULES**

T. J. MALONEY (AIA Research Corp.)

Apr. 1984

**NPO-15740** Vol. 8, No. 1, P. 125

Mounting strips patterned after glazing gaskets. Easy to install supports for rooftop solar modules consist of extruded rubber mullions with locking zippers. Supports cut to length with utility knife and installed without special tools. Adaptable to many different roof configurations.

**B83-10453**  
**PHOTOVOLTAIC ROOFS**

R. W. DRUMMOND JR. (General Electric Co.) and N. F. SHEPARD JR. (General Electric Co.)

Apr. 1984

**NPO-15881** Vol. 8, No. 1, P. 126

Solar cells perform two functions: waterproofing roof and generating electricity. Sections through horizontal and slanting joints show overlapping modules sealed by L-section rubber strips and side-by-side modules sealed by P-section strips. Water seeping through seals of slanting joints drains along channels. Rooftop photovoltaic array used watertight south facing roof, replacing shingles, tar, and gravel. Concept reduces cost of residential solar-cell array.

**B83-10454**  
**LABELING SOLAR-CELL MODULES**

E. G. WATSON (RCA Corp.) and P. J. COYLE (RCA Corp.)

Apr. 1984

**NPO-15997** Vol. 8, No. 1, P. 127

Photocopying machine produces durable identification label. Process used for double glass photovoltaic-cell modules. Matrix of cells sandwiched between thin, flexible glass mats and covered above and below by protective sheets of glass. Label contains such information as manufacturer, model number, voltage and power ratings, and serial number. May also contain electrical-shock hazard warning and identification of positive and negative terminals. Method saves expense of procuring and applying conventional labels.

**B83-10455**  
**OSCILLATING-CRUCIBLE TECHNIQUE FOR SILICON GROWTH**

T. DAUD (Caltech), K. A. DUMAS (Caltech), K. M. KIM (IBM Corp.), G. H. SCHWUTTKE (IBM Corp.), and P. SMETANA (IBM Corp.)

Apr. 1984

**NPO-15938** Vol. 8, No. 1, P. 127

Technique yields better mixing of impurities and superior quality crystals. Accelerated motion stirs melt which reduces temperature gradients and decreases boundary layer for diffusion of impurities near growing surface. Results better mixing of impurities into melt, decrease in tendency for dendritic growth or cellular growth and crystals with low dislocation density. Applied with success to solution growth and Czochralski growth, resulting in large crystals of superior quality.

## 08 FABRICATION TECHNOLOGY

**B83-10456**

**IMPROVED RADIATIVE CONTROL OF RIBBON GROWTH**  
J. P. MCHUGH (Westinghouse Electric Corp.), R. G. SEIDENSTICKER (Westinghouse Electric Corp.), and M. E. SKUTCH (Westinghouse Electric Corp.)  
Apr. 1984

**NPO-15916; NPO-15917; NPO-15918 Vol. 8, No. 1, P. 128**  
Shield modifications enhance growth rate while reducing silicon oxide formation. Control of dendritic-web crystal growth requires precise control of web temperature profile. Achieved by using series of thermal radiation shields to control thermal-radiation field in region where melt solidifying onto crystal ribbon being pulled from melt.

**B83-10457**

**COLD-CRUCIBLE PREMELTER FOR SILICON**  
R. L. LANE (Kayex Corp.)  
Apr. 1984

**NPO-16050 Vol. 8, No. 1, P. 130**  
System allows replenishment of silicon melt in crystal puller. Cold crucible consists of water-cooled, silver plated boat in 500kHz field. Induced secondary currents cause preheated chunks of silicon to melt. Magnetic repulsion between current in silicon and in boat prevents silicon from touching boat. Used for crystal growth of other materials sufficiently conductive and difficult to keep free of contamination by container walls at temperature of operation.

**B83-10458**

**STARTING SILICON-RIBBON GROWTH AUTOMATICALLY**  
J. P. MCHUGH (Westinghouse Electric Corp.)  
Apr. 1984

**NPO-15919 Vol. 8, No. 1, P. 130**  
Semiautomatic system starts growth of silicon sheets more reliably than system with purely manual control. Control signals for starting sheetcrystal growth consist of ramps (during which signal changes linearly from one value to another over preset time interval) and soaks (during which signal remains constant). Ramps and soaks for best temperature and pulling speed determined by experimentation.

**B83-10459**

**GROWING SINGLE-CRYSTAL SHEETS BY CONTROLLED COOLING**  
A. D. MORRISON (Caltech)  
Apr. 1984

**NPO-15800; NPO-15827 Vol. 8, No. 1, P. 131**  
Immersed heating and cooling elements establish desired temperature gradients. Method envisions use of high-pressure, Czochralski crystalgrowth apparatus as presently employed to grow gallium arsenide and gallium phosphide but modified to accept deep crucibles so deep layers of encapsulant used, plus X-ray or optical or sonic-imaging system to observe growth of crystal submerged in encapsulant. Method especially applicable to horizontal growth of ribbons of compound semiconductors.

**B83-10460**

**INTERSTITIAL COLLIMATING HOLES FOR GAS-LEVITATION MICROFURNACE**  
E. G. DUNN (Bjorksten Research Laboratories, Inc.), E. G. PAQUETTE (Bjorksten Research Laboratories, Inc.), E. C. ETHRIDGE (Bjorksten Research Laboratories), and J. L. JOHNSON (Bjorksten Research Laboratories, Inc.)  
Apr. 1984

**MFS-25829 Vol. 8, No. 1, P. 132**  
Spaces between small rods direct gas flow. Wires for thin rods clamped in square array in precise square groove. Spaces between wires are long, thin, parallel channels that direct flow of gas. Technique extended to such hard-to-machine refractory metals as tungsten and molybdenum.

**B83-10461**

**OFF-RESONANCE ACOUSTIC LEVITATION WITHOUT**

**ROTATION**

M. B. BARMATZ (Caltech) and J. L. ALLEN (Caltech)  
Apr. 1984

**NPO-15634 Vol. 8, No. 1, P. 133**  
Orthogonal acoustic-levitation modes excited at slightly different frequencies to control rotation. Rotation of object in square cross-section acoustic-levitation chamber stopped by detuning two orthogonal (x and y) excitation drivers in plane of square cross section. Detuning done using fundamental degenerate modes or odd harmonic modes.

**B83-10462**

**SONIC-PUMP LEVITATOR**

S. A. DUNN (Bjorksten Research Laboratories, Inc.), A. R. POMPLUN (Bjorksten Research Laboratories, Inc.), E. C. ETHRIDGE (Bjorksten Research Laboratories, Inc.), and J. L. JOHNSON (Bjorksten Research Laboratories, Inc.)  
Apr. 1984

**MFS-25828 Vol. 8, No. 1, P. 134**  
Audiopump drives gas and rapidly responds to corrective signals. Audiopump drives gas through plate opening and columnar outlets to levitate sphere. Exhaust flow dominated by gas momentum and essentially parallel to axis of outlets. With appropriate scaling up of hardware, sonic pump can function as levitator for containerless processing of more massive specimens of higher densities and of different materials.

**B83-10463**

**IN SITU COMPOSITE FASTENER**

W. T. FREEMAN JR., W. S. JONES, and G. L. FARLEY (U.S. Army Aviation Research and Development Command)  
Apr. 1984

**LAR-12939 Vol. 8, No. 1, P. 135**  
Fasteners installed prior to curing. In situ composite fastener polymeric, graphite, glass, or metallic thread, pin, or staple. Selected fastener pressed through thickness of composite component while composite is in prepreg or B-stage state. Parts not removed from mold to install fastener. Technique used around cutouts to prevent free edges from delaminating.

**B83-10464**

**REPAIRING DAMAGED POWER-CABLE INSULATION**

G. E. BAKER (Boeing Services International)  
Apr. 1984

**KSC-11206 Vol. 8, No. 1, P. 136**  
Simple method saves time, money, and material. In new method cable remains in place while new insulation is applied to damaged portion. Method results in new terminations with safety factor equal to that of any portion of cable.

**B83-10465**

**GROWING CRYSTALS FOR INFRARED DETECTORS**

S. L. LEHOCZKY (McDonnell Douglas Corp.) and F. R. SZOFRAN (McDonnell Douglas Corp.)  
Apr. 1984

**MFS-25786 Vol. 8, No. 1, P. 136**  
Unidirectional solidification yields bulk crystals with compositional homogeneity. Unidirectionally crystal-growth furnace assembly travels vertically so crystal grows upward from bottom tapered end of ampoule. Separately controlled furnaces used for hot (upper) and cold (lower) zones. New process produces ingots with radial compositional homogeneity suitable for fabricating infrared detectors.

**B83-10466**

**LIQUID-OXYGEN-COMPATIBLE CEMENT FOR GASKETS**

N. L. ELMORE (Rockwell International Corp.) and B. C. NEALE (Rockwell International Corp.)  
Apr. 1984

**MFS-19797 Vol. 8, No. 1, P. 138**  
Fluoroelastomer and metal bonded reliably by new procedure. To cure fluoroelastomer cement, metal plate/gasket assembly placed in vacuum bag evacuated to

minimum vacuum of 27 inches (69 cm) of mercury. Vacuum maintained throughout heating process and until assembly returns to ambient room temperature. Used to seal gaskets and O-rings or used to splice layers of elastomer to form non-standard sized O-rings. Another possible use is to apply protective, liquid-oxygen-compatible coating to metal parts.

**B83-10467**  
**FABRICATION OF HOLLOW SPHERES**

J. M. KENDALL JR. (Caltech)

Apr. 1984

**NPO-15798**

**Vol. 8, No. 1, P. 138**

Nozzle forms gas-filled spherical shells of high dimensional uniformity. Hollow-Sphere shell generator produces gas-filled metal sphere at rate of about 100 per second with repeat ability in all dimensions. Sphere filled with gas at pressure as high as 2,000psi. Process well suited for making targets for laser fusion.

**B83-10468**  
**INTERFACE INSTABILITY DURING CRYSTAL GROWTH**

W. A. TILLER (Stanford University), R. S. FEIGELSON (Stanford University), and D. ELWELL (Stanford University)

Apr. 1984

**MFS-25841**

**Vol. 8, No. 1, P. 139**

Report on study of solute segregation and interface stability during crystal growth describes new theoretical model for crystal growth from melt. Report also describes experiments in crystal growth by controlled-gradient freezing and by pulling from melt (Czochralski growth).

**B83-10469**  
**ERECTABLE SPACE-CONSTRUCTION FIXTURE**

R. R. THOMPSON (Rockwell International Corp.)

Apr. 1984

**MSC-20259**

**Vol. 8, No. 1, P. 140**

Concept for erectable space construction fixture described in report. Fixture combines all equipment required for construction of framework for space platform into single compact work station. Almost all aspects of assembly and fabrication automated. Design goals for fixture include platform assembly in shortest possible time and minimizing fuel and power requirements of support spacecraft.

**B83-10470**  
**RAPID CIRCUIT BREADBOARDING**

E. C. ETHRIDGE

Apr. 1984

**MFS-25761**

**Vol. 8, No. 1, P. 140**

Cost of one-of-a-kind circuit board reduced. Circuits assembled quickly by using prototyping board in conjunction with copper-clad circuit board that has same hole pattern.

**B83-10471**  
**IMPROVED SILICON-GROWTH CHAMBER**

J. D. HEAPS (Honeywell, Inc.) and J. D. ZOOK (Honeywell, Inc.)

Apr. 1984

**NPO-15237**

**Vol. 8, No. 1, P. 141**

Silicon-growth technique, based on coating ceramic substrates with thin layer of molten silicon solidifies to form polycrystalline film, modified to produce solar-cell quality silicon sheet.

**B83-10472**  
**GROWING SINGLE CRYSTALS FROM LOW-PURITY SILICON**

F. SCHMID (Crystal Systems, Inc.)

Apr. 1984

**NPO-15538**

**Vol. 8, No. 1, P. 141**

Heat exchanger method continuously moves impurities to outside of growth interface. Silicon heated in crucible to above melting point, and melted silicon then solidified by extracting heat from bottom of crucible by means of heat exchanger.

**B83-10473**  
**MELT-LEVEL SENSING IN SILICON-WEB GROWTH**

C. S. DUNCAN (Westinghouse Electric Corp.), M. E. SKUTCH (Westinghouse Electric Corp.), and K. B. STEINBRUEGGE (Westinghouse Electric Corp.)

Apr. 1984

**NPO-15356**

**Vol. 8, No. 1, P. 141**

Laser beam reflected from silicon-melt surface onto position detector to monitor melt level during web growth. Silicon web production increased by synchronizing silicon melt replenishment with web growth rate.

**B83-10474**  
**PROPOSED TECHNIQUE OF CRYSTAL-RIBBON GROWTH**

J. W. THORNHILL (Caltech)

Apr. 1984

**NPO-15629**

**Vol. 8, No. 1, P. 141**

Technique for silicon crystal-ribbon growth from crucible, two inert wettable filaments dipped into silicon melt to guide growth of silicon sheet. Filaments clamped in place and tilted slightly away from each other and seed ribbon lowered into contact with melt to establish menisci between filaments.

**B83-10475**  
**SHIELD BOOSTS SILICON-GROWTH RATE**

R. L. LANE (Kayex Corp.)

Apr. 1984

**NPO-16049**

**Vol. 8, No. 1, P. 141**

Radiation shield permits faster growth--by 20 percent--of singlecrystal silicon from molten silicon by producing sharper thermal gradients near growth front.

**B83-10476**  
**LOW-COST GAAS SOLAR CELLS**

R. J. STIRN (Caltech) and J. SCOTT-MONCK (Caltech)

Apr. 1984

**NPO-14914; NPO-14931**

**Vol. 8, No. 1, PP. 141**

Single-crystal gallium arsenide (GaAs) solar cell produced at greatly reduced cost by replacing GaAs wafer substrate with silicon substrate.

**B83-10477**  
**PREVENTING MOISTURE DAMAGE TO SOLAR PANELS**

E. G. LAUE (Caltech)

Apr. 1984

**NPO-15481**

**Vol. 8, No. 1, P. 142**

Encapsulating photovoltaic solar cells with polysulfonated membrane prevents moisture damage to cells. Gases escape through vents before damage can occur.

**B83-10478**  
**QUENCHING ALLOYS IN CONTAINERLESS PROCESSING**

W. A. ORAN

Apr. 1984

**MFS-25305**

**Vol. 8, No. 1, P. 142**

Magnetic levitation and gas quenching combined in proposed method to melt and rapidly solidify alloys without contacting container walls. Method used to develop new carbides for drill bits, high-ductility structured steel and new high-strength superplastic alloys.

**B83-10479**  
**CONTAINERLESS-PROCESSING MODULE**

T. G. WANG (Caltech), M. B. BARMATZ (Caltech), F. R. CHAMBERLAIN (Caltech), M. HAGAN (Caltech), R. C. HEYSER (Caltech), H. H. HORIUCHI (Caltech), J. H. KURASHITA (Caltech), J. K. LAMGMAIER (Caltech), R. L. ROBINSON (Caltech), R. P. SALAZAR (Caltech) et al

Apr. 1984

**NPO-14932**

**Vol. 8, No. 1, P. 142**

High-temperature, containerless-processing module positions and melts molten glass or metal without contact with container wall. Fluid masses manipulated, stirred, and

## 08 FABRICATION TECHNOLOGY

controlled by acoustic forces. Module provides photographic monitoring and transfer of solidified specimens to storage bins.

**B83-10480**

### VALUE-ENGINEERING REVIEW FOR NUMERICAL CONTROL

J. L. WARNER (Rockwell International Corp.)  
Apr. 1984

**MFS-19664**

**Vol. 8, No. 1, P. 142**

Selecting parts for conversion from conventional machining to numerical control, value-engineering review performed for every part to identify potential changes to part design that result in increased production efficiency.

**B83-10481**

### CHECKING WELD COMPOSITION

M. D. ROBERTSON (Rockwell International Corp.) and S. M. COLLIER (Rockwell International Corp.)

Apr. 1984

**MFS-19628**

**Vol. 8, No. 1, P. 143**

Electrolytic etching determines whether certain iron/nickel alloys welded with sufficient quantities of desired filler metal.

**B83-10482**

### ADHESIVE REMOVAL FROM PROTECTIVE CLOTHING

D. R. PRATHER (The Bendix Corp.)

Apr. 1984

**KSC-11017**

**Vol. 8, No. 1, P. 143**

Electrical eraser removes butyl cement from protective coveralls. Method used to remove other adhesives from different surfaces.

**B83-10483**

### PORTABLE PLATING SYSTEM

R. FLORES (Rockwell International Corp.)

Apr. 1984

**MFS-19631**

**Vol. 8, No. 1, P. 143**

Plating system mounted on portable cart includes 30-gallon (23.5 liter) electrolyte tank, filler pump, heaters, replenishing anodes, plating rectifiers and tank rectifier to continuously remove contaminants.

**B83-10484**

### REPAIRING DEFECTIVE WELDS

T. ADAMS (Rockwell International Corp.)

Apr. 1984

**MFS-19618**

**Vol. 8, No. 1, P. 143**

Welds not reworked because limited accessibility or material-annealing considerations reinforced by electrodeposition. Procedure of interest for nuclear reactor construction.

**B83-10485**

### WICKING COATING FOR HEAT PIPES

W. K. MINNICH (General Electric Co.)

Apr. 1984

**NPO-15212**

**Vol. 8, No. 1, P. 143**

Wicking for inside of heat pipes and heat-storage canisters formed by flame-spraying porous coating over wire mesh placed on surface to be treated. Method less expensive than method currently used.

**B83-10486**

### DECOUPLING A REFLECTING LAYER FROM ITS SUPPORT STRUCTURE

R. M. BAMFORD (Caltech)

Apr. 1984

**NPO-15346**

**Vol. 8, No. 1, P. 143**

Mounting decouples thermal distortions of reflective surface so not transmitted to support structure. Reflecting layer consists of aluminum reflecting tiles attached to support structure by flexural mounting bend and twist to accommodate thermal expansion of tiles. Technique useful in microwave-antenna reflectors.

**B83-10487**

### SEALANT APPLICATOR FOR FASTENER HEADS

M. H. SHARPE, C. H. JACKSON, J. D. LAMBERT, C. HENDERSON, and W. E. NORTON

Apr. 1984

**MFS-25922**

**Vol. 8, No. 1, P. 144**

Dispenses sealant, either manually or automatically, in predetermined amounts. Applicator encapsulates heads of fasteners with measured shot of sealant to protect from corrosive environments.

**B83-10688**

### BONDED LOCKSTITCH FOR INSULATING BLANKETS

J. M. RIVIN (Rockwell International Corp.), C. A. MORANT (Rockwell International Corp.), and R. M. EHRET (Rockwell International Corp.)

Nov. 1984

**MSC-20283**

**Vol. 8, No. 2, P. 271**

Improved sewing technique for high-temperature insulating blankets prevents stitch failure in hot, turbulent environments. Standard lockstitch modified to isolate single-stitch failures. Bobbin thread kept at blanket surface. Silicone adhesive applied to all bobbin/needle intersections, so failure at one point will not propagate along thread. Suitable for use in aerodynamic and other applications where there is turbulence.

**B83-10689**

### REPAIRING HIDDEN CRACKS IN COOLANT TUBES

R. MILLS SR. (Rockwell International Corp.) and J. DUESBERG (Rockwell International Corp.)

Nov. 1984

**MFS-19796**

**Vol. 8, No. 2, P. 272**

Repair technique closes leaks in tubes or conduits where access limited to wall opposite crack. Technique applicable to any tubular assembly where tubes bundled together or bonded to supporting shell, such as in heat exchangers. Procedure provides structural support to area failed and uninterrupted flow without significantly altering heat-transfer profile.

**B83-10690**

### AUTOMATIC GUIDANCE SYSTEM FOR WELDING TORCHES

H. SMITH, W. WALL, and M. BURNS JR.

Nov. 1984

**MFS-25807**

**Vol. 8, No. 2, P. 273**

Digital system automatically guides welding torch to produce squarebutt, V-groove and lap-joint weldments within tracking accuracy of +0.2 millimeter. Television camera observes and traverses weld joint, carrying welding torch behind. Image of joint digitized, and resulting data used to derive control signals that enable torch to track joint.

**B83-10691**

### FITTING FLEXIBLE COVERINGS TO CONTOURED SURFACES

D. D. HELMAN (Rockwell International Corp.), S. Y. YOSHINO (Rockwell International Corp.), and D. S. WANG (Rockwell International Corp.)

Nov. 1984

**MSC-20503**

**Vol. 8, No. 2, P. 274**

Method using two transparent plastic sheets and polyethylene foam spacer produces flat templates from contoured surfaces. Once prepared, templates laid flat, and insulation inserted between two templates cut to shape to fit contoured surface. Sections of insulation prepared by contour-transferring technique fit contoured surfaces precisely. Procedure used for tailoring protective covers or for installation of vibrationabsorbing material over contoured surfaces.

**B83-10692**

### IC FABRICATION METHODS IMPROVE LASER DIODES

M. MILLER (Perkin-Elmer Corp.) and V. PICKHARDT (Perkin-Elmer Corp.)

Nov. 1984 See Also NASA CR-165683

**LAR-13059** Vol. 8, No. 2, P. 275

Family of high-performance, tunable diode lasers developed for use as local oscillators in passive laser heterodyne spectrometer. Diodes fabricated using standard IC processes include photolithography, selective etching and vacuum deposition of metals and insulators. Packaging refinements improved thermal-cycling characteristics of diodes and increased room-temperature shelf life.

**B83-10693**  
**ICE AS AN ABRADING AGENT**

R. K. BLOW (Rockwell International Corp.)

Nov. 1984

**MFS-19837** Vol. 8, No. 2, P. 276

Grit-blasting method makes unnecessary to disassemble equipment for cleaning. Stream of small, frozen pellets directed at assembly to be cleaned. Pellets consist of deionized-water ice, carbon dioxide ice, or another substance that does not react chemically with parts to be cleaned and leaves no residue. Method suited to cleaning titanium and parts that touch liquid oxygen.

**B83-10694**  
**FORMING LIGHTWEIGHT BEAMS FROM COMPOSITE TAPE**

Innovator Not Given (Goldsworthy Engineering, Inc.) Nov. 1984

**MFS-25880** Vol. 8, No. 2, P. 277

Hollow beams for assembling trusses and other structures produced from graphite/polysulfone tape. Process results in structures strong, light, and durable. Used to mass produce other lightweight parts besides beams.

**B83-10695**  
**POLYURETHANE FILLER FOR ELECTROPLATING**

J. L. BEASLEY (Rockwell International Corp.)

Nov. 1984

**MFS-19851** Vol. 8, No. 2, P. 277

Polyurethane foam proves suitable as filler for slots in parts electroplated with copper or nickel. Polyurethane causes less contamination of plating bath and of cleaning and filtering tanks than wax fillers used previously. Direct cost of maintenance and indirect cost of reduced operating time during tank cleaning also reduced.

**B83-10696**  
**RIBBED COOLANT LINERS FOR COMBUSTION CHAMBERS**

W. R. WAGNER (Rockwell International Corp.)

Nov. 1984

**MFS-19829** Vol. 8, No. 2, P. 278

Coolant-carrying liner for combustion chambers runs cooler and tolerates high-temperature excursions without burning out. Hot gases flowing through core prevented by liner from damaging shell. Concept applicable to such high-temperature chambers as rocket pre-burners, turbojet cans, stationary-turbine combustors, oil burners, and high-pressure chemical reactors.

**B83-10697**  
**LOCKING CORNERS SPEED SOLAR-ARRAY FRAME ASSEMBLY**

S. OLAH (Applied Solar Energy Corp.) and W. J. SAMPSON (Applied Solar Energy Corp.)

Nov. 1984

**NPO-15750** Vol. 8, No. 2, P. 279

Mitered corners of solar-array frames joined together by single angle brace and two springs. Locking corner braces and mating frame members pushed together by hand or assembled automatically. Fastening system used to assemble window screens and picture frames.

**B83-10698**  
**RIBBON REDUCES SPIKING IN ELECTRON-BEAM WELDING**

R. E. OLSON (Rockwell International Corp.)

Nov. 1984

**MFS-19701** Vol. 8, No. 2, P. 279

Spiking in electron-beam welding reduced by placing high-vaporpressure substance along path of electron beam. Strip of metal having vapor pressure higher than base metal at same temperature placed in slot machined along weld line. Strip vaporizes as beam strikes it, and vapor pressure keeps surface tension from closing off top of channel. Technique used successfully on nickel alloys and aluminum alloys and effective on steel and titanium.

**B83-10699**  
**LESS-COSTLY ION IMPLANTATION OF SOLAR CELLS**

D. J. FITZGERALD (CALTECH)

Dec. 1984

**NPO-15511** Vol. 8, No. 2, P. 280

Experiments point way toward more relaxed controls over ion-implantation dosage and uniformity in solar-cell fabrication. Data indicate cell performance, measured by output current density at fixed voltage, virtually same whether implant is particular ion species or broad-beam mixture of several species.

**B83-10700**  
**JOINING TUBES WITH ADHESIVE**

W. A. BATEMAN (Rockwell International Corp.)

Dec. 1984

**MFS-25958** Vol. 8, No. 2, P. 281

Cylindrical tubes joined together, end to end, by method employing adhesive, tapered ends, and spacing wires. Tapered joint between tubular structural elements provides pressure between bonding surfaces during adhesive curing. Spacing wires prevent adhesive from being scraped away when one element inserted in other. Method developed for assembling structural elements made of composite materials.

**B83-10701**  
**POSITIONING VISE FOR CRYSTAL CLEAVAGE**

F. C. HALLBERG and C. J. MORGAN

Dec. 1984

**GSC-12762** Vol. 8, No. 2, P. 282

Vise manipulates brittle crystals, such as lithium fluoride, so they are in proper position for cleaving. Vise allows crystals as thin as 2 millimeters or less positioned so that cleaved without breakage. Vise holds workpiece firmly but gently. Bushings, shafts and adjusting screw designed to move jaws smoothly and uniformly with great tactile sensitivity.

**B83-10702**  
**ULTRASONIC BONDING OF SOLAR-CELL LEADS**

W. FRASCH (Kulicke and Soffa Industries, Inc.)

Dec. 1984

**NPO-16140** Vol. 8, No. 2, P. 283

Rolling ultrasonic spot-bonding method successfully joins aluminum interconnect fingers to silicon solar cells with copper metalization. Technique combines best features of ultrasonic rotary seam welding and ultrasonic spot bonding; allows fast bond cycles and high indexing speeds without use of solder or flux. Achieves reliable bonds at production rates without damage to solar cells. Bonding system of interest for all solar-cell assemblies and other assemblies using flat leads (rather than round wires).

**B83-10703**  
**REPAIRABLE ENCAPSULATED ELECTRONIC MODULES**

P. C. DOZOIS (CALTECH) and R. C. MAYNE (CALTECH)

Dec. 1984

**NPO-15079** Vol. 8, No. 2, P. 284

Packaging technique seals electronic modules as effectively as potting in epoxy, yet permits removal of encapsulant when component change necessary. Technique encloses module in thin, rigid epoxy/fiberglass shell containing lightweight syntactic foam.

## 08 FABRICATION TECHNOLOGY

**B83-10704**

### FABRICATION OF MULTI-PLY BIREFRINGENT FIBROUS COMPOSITE LAMINATES

I. DANIEL (ITT Research Institute) and T. NIRO (ITT Research Institute)

Dec. 1984 See Also NASA CR-165709

**LAR-12960**

**Vol. 8, No. 2, P. 284**

Fabrication method produces unidirectional, multi-ply, transparent birefringent fibrous composite laminates for use in macromechanical stress analysis conducted by means of anisotropic photoelasticity. New laminates glass-fiber-reinforced plastics for which matrix and fibers have same index of refraction. Method utilized in structural applications of composites.

**B83-10705**

### MODIFIED FABRICATION FOR INGAASP STRIP LASER

I. LADANY (RCA Corp.) and T. R. FURMAN (RCA Corp.)

Dec. 1984

**LAR-12986**

**Vol. 8, No. 2, P. 285**

Improved fabrication of InGaAsP stripe lasers involves replacement of oxide stripe in quaternary laser by an n-type layer of InP grown on top of quaternary cap layer. Process allows use of stop etch that selectively removes InP and does not etch InGaAsP, making fabrication especially convenient.

**B83-10706**

### FRAME ALLINES FIBERS IN MULTILAYER COMPOSITES

J. CLEMONS, F. LEDBETTER III, B. PENN, W. WHITE, and J. DANIELS

Dec. 1984

**MFS-25959**

**Vol. 8, No. 2, P. 286**

Jib ensures layers of fiber-reinforced preimpregnated tape correctly oriented in assembly of composite panels. Jig enables fast and reproducible alignment of fibers in multi-axis layups.

**B83-10707**

### PHASE MODULATION STOPS LEVITATED SAMPLE ROTATION

M. B. BARMATZ (CALTECH) and J. H. BROWN (CALTECH)

Dec. 1984

**NPO-16002**

**Vol. 8, No. 2, P. 286**

Rotation of sample in acoustic levitator prevented by relatively simple phase-modulation scheme. Technique differs from older methods; no feedback control or observation of sample required, nor necessary to carefully tune or detune two oscillators to precise frequency differences from resonance.

**B83-10708**

### PROCESSES FOR VLSI CIRCUITS

T. E. WADE (Mississippi State University)

Dec. 1984

**MFS-25857**

**Vol. 8, No. 2, P. 287**

Four-volume document reviews key technologies for interconnecting in very-large-scale integrated (VLSI) circuits. Document also discusses current and proposed research into novel fabrication techniques for interconnections.

**B83-10709**

### OPTIMIZING GRID PATTERNS ON PHOTOVOLTAIC CELLS

D. R. BURGER (CALTECH)

Dec. 1984

**NPO-15841**

**Vol. 8, No. 2, P. 288**

CELICAL computer program helps in optimizing grid patterns for different photovoltaic cell geometries and metalization processes. Five different powerloss phenomena associated with front-surface metal grid pattern on photovoltaic cells.

**B83-10710**

### OXIDATION PROTECTION FOR THERMOCOUPLES

R. RICHTER (CALTECH)

Dec. 1984

**NPO-15605**

**Vol. 8, No. 2, P. 288**

Thin platinum film on thermocouple sheath protects non-noble-metal thermocouples from deterioration in oxygen-rich atmosphere. Coating works on nickel-alloy sheathed thermocouples otherwise destroyed by corrosion in pure oxygen at 1,000 degrees C.

**B83-10711**

### TOROIDAL ELLIPSOID FLOAT-ZONE HEATER

R. B. DAVIDSON (Technology Development Corp.)

Dec. 1984

**MFS-25771**

**Vol. 8, No. 2, P. 288**

Furnace heats and melts circumferential ring of material ('Float Zone') on round bar. In float-zone processing, bar pulled through furnace so zone travels along bar.

**B83-10712**

### REPAIRING THERMAL TILES

C. R. MCCAIN JR. (Rockwell International Corp.) and C. W. FEILER (Rockwell International Corp.)

Dec. 1984

**MSC-20336**

**Vol. 8, No. 2, P. 288**

Small chips and depression in surfaces of surface insulation tiles repaired using Ludox colloidal silica solution and silica powder. No waiting time necessary between mixing filler and using it. Patch cures quickly without heat being applied.

**B83-10713**

### BELLOWS WITH LONGITUDINAL BEAMS

W. GARVIN (Rockwell International Corp.)

Dec. 1984

**MFS-19633**

**Vol. 8, No. 2, P. 289**

Bellows assembled using two longitudinal side seams allow seam joints to be placed in axial directions of bellows. Design of particular importance in difficult situations where frequent assembly or repair required or in limited-access areas not desirable to disassemble total unit to replace one-piece bellows.

**B83-10714**

### STRAIN ANALYSIS OF GRAPHITE/EPOXY VESSELS

V. VERDERAIME and M. RHEINFURTH

Dec. 1984

**MFS-27018**

**Vol. 8, No. 2, P. 289**

NASA Technical Paper discusses stiffness parameters of filament-wound graphite/epoxy pressure vessels. In some situations, lightweight composite substituted for steel.

**B83-10715**

### ELECTROFORMED ELECTRODES FOR ELECTRICAL-DISCHARGE MACHINING

A. WERNER (Rockwell International Corp.) and M. CASIDENTI (Rockwell International Corp.)

Dec. 1984

**MFS-19651**

**Vol. 8, No. 2, P. 289**

Copper electrodes replace graphite electrodes in many instances of electrical-discharge machining (EDM) of complex shapes. Copper electrodes wear longer and cause less contamination of EDM dielectric fluid than do graphite electrodes.

**B83-10716**

### SECURING IDENTIFICATION SLEEVING

E. P. SEIGGUM (Rockwell International Corp.)

Dec. 1984

**MFS-19685**

**Vol. 8, No. 2, P. 289**

Identification sleeving slides or bunches during handling or vibration held in place by shrinkage tubing. Tubing slid over one end of cable and shrunk with hand-held hot-air gun.

**B83-10717**

### CRYOGENIC SEPARATION OF A CERAMIC FROM ITS MANDREL

E. W. COVINGTON III  
Dec. 1984

**LAR-12904** Vol. 8, No. 2, P. 289

Thermally sprayed ceramic released from its mandrel by immersing ceramic part and mandrel in cryogenic liquid. Technique takes advantage of difference in expansion coefficients.

**B83-10718**  
**PRESSURE/VACUUM BONDING FOR LOW-CURVATURE MIRRORS**

P. O. FRICKLAND (CALTECH)

Dec. 1984  
**NPO-15613**

Vol. 8, No. 2, P. 289

Pressure/vacuum bonding technique facilitates assembly of large solarconcentrator mirrors. Reflecting surfaces attached to nonreflecting substrates.

**B83-10719**  
**FLAME-TEST CHAMBER**

R. A. BJORKLUND (CALTECH)

Dec. 1984  
**NPO-15407**

Vol. 8, No. 2, P. 290

Experimental chamber provides controlled environment for observation and measurement of flames propagating in expanding plume of flammable air/fuel mixture under atmospheric conditions. Designed to evaluate quenching capability of screen-type flame arresters in atmospheric vents of fuel cargo tanks aboard marine cargo vessels.

**B83-10720**  
**AIRLOCK ENTRY**

P. O. FRICKLAND (CALTECH) and E. L. CLELAND (CALTECH)

Dec. 1984  
**NPO-15415**

Vol. 8, No. 2, P. 290

Proposed airlock retrofitted to air-inflated polymeric domes to accommodate large vehicles. Airlock inexpensive, simple to assemble, adaptable to any terrain and any size required, and requires no external power.

**B83-10721**  
**ADJUSTING THE CONTOUR OF REFLECTOR PANELS**

W. B. PALMER (TRW, Inc.) and M. M. GIEBLER (TRW, Inc.)

Dec. 1984  
**NPO-15319**

Vol. 8, No. 2, P. 290

Postfabrication adjustment of contour of panels for reflector, such as parabolic reflector for radio antennas, possible with simple mechanism consisting of threaded stud, two nuts, and flexure. Contours adjusted manually.

**B83-10722**  
**AUTOMATED VARIABLE-POLARITY PLASMA-ARC WELDING**

A. NUMES JR., E. BAYLESS JR., S. JONES III, P. MUNAFO, A. MUNAFO, A. BIDDLE, and W. WILSON

Dec. 1984  
**MFS-27042**

Vol. 8, No. 2, P. 290

Variable-polarity plasma-arc methods produces better welds at lower cost than gas-shielded tungsten-arc welding in assemblies. Weld porosity very low and costs of joint preparation, depeaking, inspection, and weld minimized.

**B83-10723**  
**WELDING TUBES IN PLACE**

R. MEREDITH (North American Aviation, Inc.)

Dec. 1984  
**MFS-25714**

Vol. 8, No. 2, P. 290

Special welding equipment joins metal tubes that carry pressurized cyrogenic fluids. Equipment small enough to be used in confined spaces in which such tubes often mounted. Welded joints lighter in weight and more leak-proof than joints made with mechanical fittings.

**B83-10724**  
**HOT FORMING WITH ELECTRON-BEAM WELDER**

R. K. DOBSON (Rockwell International Corp.) and E. L. WHIFFEN (Rockwell International Corp.)

Dec. 1984  
**MSC-20413**

Vol. 8, No. 2, P. 290

Hot forming to restore size and shape of thin metal parts done with electron-beam welder. Work-piece heated in scanning defocused electron beam rather than conventional heat-treating furnace. Technique proved successful in straightening some thin flanges of nickel alloy and titanium.

**B83-10725**  
**MICROFISSURING IN ALLOYS DURING WELDING**

Innovator Not Given (College of Engineering of Clemson University) Dec. 1984

**MFS-25604**

Vol. 8, No. 2, P. 291

Evaluating cause of intergranular cracking (microfissuring) in high-temperature alloys during welding done by measuring number of microcracks as function of temperature and plastic strain. Two mechanisms of microfissuring in heat-affected zones suggested.

**B83-10726**  
**ACOUSTIC-LEVITATION CHAMBER**

M. B. BARMATZ (CALTECH), D. GRANETT (CALTECH), and M. C. LEE (CALTECH)

Dec. 1984  
**NPO-16142**

Vol. 8, No. 2, P. 291

Uncontaminated environments for highly-pure material processing provided within completely sealed levitation chamber that suspends particles by acoustic excitation. Technique ideally suited for material processing in low gravity environment of space.

**B83-10727**  
**MONITORING ACOUSTICALLY LEVITATED SAMPLES**

T. A. GLAVICH (CALTECH), D. J. KERRISK (CALTECH), J. M. MCLAUCHIAN (CALTECH), J. K. LANGMAIER (CALTECH), and F. R. CHAMBERLAIN III (CALTECH)

Dec. 1984  
**NPO-15193**

Vol. 8, No. 2, P. 291

Physical behavior of sample acoustically levitated in high-temperature oven optically monitored by new system. Optical system allows visible and infrared monitoring of sample.

**B83-10728**  
**SOLAR-CELL-MANUFACTURING SYSTEM**

F. G. KELLY (TRW, Inc.)

Dec. 1984  
**MFS-25483**

Vol. 8, No. 2, P. 291

Cost of manufacturing solar arrays minimized by using polyimide-ribbed substrates together with silver-plated coils of low-expansion nickel/iron ribbon on solar cells. Polyimide taped to ribbon protects cell from abrasion or from sticking to other tooling.

**B83-10729**  
**AUTOMATED ASSEMBLY OF SOLAR PANELS**

J. J. HAGERTY (MB Associates)

Dec. 1984  
**NPO-16206; NPO-16207; NPO-16208; NPO-16209**

Vol. 8, No. 2, P. 291

Robot places photoelectric cells in lamination chamber and removes cured panel. Automated process expected to lower cost of solar-panel fabrication.

**B83-10730**  
**PURIFYING SILICON DURING CRYSTAL GROWTH**

P. J. SHLICHTA (CALTECH)

Dec. 1984  
**NPO-14831**

Vol. 8, No. 2, P. 291

Direct current applied to molten silicon during crystallization causes impurities to migrate away from interface of

## 08 FABRICATION TECHNOLOGY

growing crystal. Method improves purity of crystal without interfering with growth process or requiring additional operator attention.

**B83-10731**  
**SILICON-FILM GROWTH BY CONTINUOUS EDGE-SUPPORTED MELT SKIMMING**  
G. H. SCHWUTTKE (CALTECH) and J. K. LIU (CALTECH)  
Dec. 1984  
NPO-15532 Vol. 8, No. 2, P. 292  
Proposed technique grows thin sheets of silicon at high speeds with minimal contamination. Films grown in novel and continuous manner without presence of substrate.

**B83-10732**  
**ALIGNING SOLDER PADS ON A SOLAR CELL**  
A. G. LAZZERY (RCA Corp.)  
Dec. 1984  
NPO-15298 Vol. 8, No. 2, P. 292  
Mechanism consisting of stylus and hand-operated lever incorporated into screening machine to precisely register front and back solder pads during solar-cell assembly. Technique may interest those assembling solar cells manually for research or prototype work.

**B83-10733**  
**TERMINAL SYSTEM FOR PHOTOVOLTAIC ARRAYS**  
T. J. MALONEY (AIA Research Corp.)  
Dec. 1984  
NPO-15739 Vol. 8, No. 2, P. 292  
Quick-connect terminal system provides electrical contact and physical alignment between adjacent photovoltaic modules. Dual-ended plugs connect adjacent modules; single-ended plugs connect bus cables. No tools required to insert plugs and no live terminals exposed before, during, or after connection.

## 09 MATHEMATICS AND INFORMATION SCIENCES

**B83-10121**  
**INFORMATION-SYSTEMS DATA-FLOW DIAGRAM**  
J. O. BLOSIU (CALTECH)  
Aug. 1983  
NPO-15492 Vol. 7, No. 3, P. 355  
Single form presents clear picture of entire system. Form giving relational review of data flow well suited to information system planning, analysis, engineering, and management. Used to review data flow for developing system or one already in use.

**B83-10122**  
**LARGE-SCALE SOFTWARE MANAGEMENT SYSTEM**  
G. L. KIRKLAND (International Business Machines Corp.)  
Aug. 1983  
KSC-11230 Vol. 7, No. 3, P. 356  
Changes are organized and controlled according to consistent procedures. System contains two sets of libraries: baseline and development. Library is hierarchical catalog and file structure in which catalog levels and entries identify and delineate software components and functions within components. Especially suited to 'multi-flow' environment, in which there is more than one version of each software module.

**B83-10123**  
**PLANNING TRANSPORT AND MANUFACTURING FOR LOWEST COST**  
L. A. DAMARIO (CALTECH), D. V. BYRNES (CALTECH),

and R. H. STANFORD (CALTECH)  
Aug. 1983  
NPO-15391 Vol. 7, No. 3, P. 357  
A method applicable to transportation and manufacturing. New algorithm alleviates some mathematical difficulties of planning segmented trajectories for lowest cost. Algorithm involves modified Newtonian iterative method in which perapse times, closest approach distances, and orientations of approach hyperbolas serves as independent variables.

**B83-10124**  
**SHUTTLE INVENTORY MANAGEMENT**  
(Innovator Not Given) Computer Services Division Aug. 1983  
KSC-11219 Vol. 7, No. 3, P. 357  
Inventory Management System (SIMS) consists of series of integrated support programs providing supply support for both Shuttle program and Kennedy Space Center base operations. SIMS controls all supply activities and requirements from single point. Programs written in COBOL.

**B83-10238**  
**DETERMINING NORMAL-DISTRIBUTION TOLERANCE BOUNDS GRAPHICALLY**  
M. A. MEZZACAPPA (Rockwell International Corp.)  
Oct. 1983  
MSC-20115 Vol. 7, No. 4, P. 480  
Graphical method requires calculations and table lookup. Distribution established from only three points: mean upper and lower confidence bounds and lower confidence bound of standard deviation. Method requires only few calculations with simple equations. Graphical procedure establishes best-fit line for measured data and bounds for selected confidence level and any distribution percentile.

**B83-10239**  
**HARMONIC-BALANCE ALGORITHM FOR NONLINEAR SYSTEMS**  
J. R. MITCHELL (Mississippi State University) and O. L. BARRON (Mississippi State University)  
Oct. 1983  
MFS-25821 Vol. 7, No. 4, P. 480  
Limit cycles identified in systems with multiple nonlinearities and multiple paths. Feedback control system or other physical system with feedback has several forward signal paths with both linear and nonlinear elements in each path. New algorithm finds limit cycles for systems of this configuration. Applied to systems of general type.

**B83-10240**  
**DIGITAL FILTERS FOR TWO-DIMENSIONAL DATA**  
T. R. EDWARDS  
Oct. 1983  
MFS-25790 Vol. 7, No. 4, P. 481  
Computational efficient filters speed processing of two-dimensional experimental data. Two-dimensional smoothing filter used to attenuate high-frequency noise in two-dimensional numerical data arrays. Filter provides smoothed data values equal to values obtained by fitting surface with second and third-order terms to 5 by 5 subset of data points centered on points and replacing data at each point by value of surface fitted at point. Especially suited for efficient analysis of two-dimensional experimental data on images.

**B83-10241**  
**KSC CONSTRUCTION COST INDEX**  
J. A. BROWN  
Oct. 1983  
KSC-11252 Vol. 7, No. 4, P. 482  
Kennedy Space Center cost Index aids in conceptual design cost estimates. Report discusses development of KSC Cost Index since January 1974. Index since January 1974. Index provides management, design engineers, and estimators an up-to-date reference for local labor and

material process. Also provides amount and rate of change in these costs used to predict future construction costs.

**B83-10242**  
**CONCEPTUAL COST ESTIMATING**

J. A. BROWN  
Oct. 1983

**KSC-11253** Vol. 7, No. 4, P. 482

Kennedy Space Center data aid in efficient construction-cost management. Report discusses development and use of NASA TR-1508, Kennedy Space Center Aerospace Construction price book for preparing conceptual budget, funding cost estimating, and preliminary cost engineering reports. Report based on actual bid prices and Government estimates.

**B83-10243**  
**FROST FORECASTING FOR FRUITGROWERS**

J. D. MARTSOLF (University of Florida) and E. CHEN (University of Florida)

Oct. 1983 See Also NASA CR-166827 (N82-20607/NSP)  
**KSC-11241** Vol. 7, No. 4, P. 482

Progress in forecasting from satellite data reviewed. University study found data from satellites displayed in color and used to predict frost are valuable aid to agriculture. Study evaluated scheme to use Earth-temperature data from Geostationary Operational Environmental Satellite in computer model that determines when and where freezing temperatures endanger developing fruit crops, such as apples, peaches and cherries in spring and citrus crops in winter.

**B83-10244**  
**SOFTWARE SPECIFICATION LANGUAGE**

B. P. BUCKLES (Science Applications, Inc.), J. P. RYAN (Science Applications, Inc.), and S. L. AUSTIN  
Oct. 1983

**MFS-23737** Vol. 7, No. 4, P. 483

SSL translator aids in developing and checking software systems. Goal of SSL is to provide form of verification and consistency checking early in design phase. Serves as formal document to communicate software architecture to detailed designers.

**B83-10245**  
**FOREST RESOURCE INFORMATION SYSTEM**

R. P. MROCNYSKI (Purdue University)  
Oct. 1983

**MSC-20270** Vol. 7, No. 4, P. 484

Twenty-three processing functions aid in utilizing LANDSAT data for forest resource management. Designed to work primarily with digital data obtained from measurements recorded by multispectral remote sensors mounted on aerospace platforms. Communication between processing functions, simplicity of control, and commonality of data files in LARSFRIS enhance usefulness of system as tool for research and development of remote sensing systems.

**B83-10246**  
**SECURITY PACKAGE FOR THE VAX**

V. J. MARKS (MATSCO) and C. E. BENIGUE (MATSCO)  
Oct. 1983

**MSC-20423** Vol. 7, No. 4, P. 484

Four programs deal with intruders and resource management. Package available from COSMIC provides DEC VAX-11/780 with certain 'deterent' security features. Although package is not comprehensive security system, of interest for any VAX installation where security is concern.

**B83-10488**  
**PROCESSING OF SYNTHETIC-APERTURE-RADAR DATA**

A. E. DI CENZO (Caltech)  
Apr. 1984

**NPO-15316** Vol. 8, No. 1, P. 147

Ambiguous data combined to permit fast-transform convolution. New data processor designed: two-dimensional

ensemble of range-correlated SAR data stored in memory and extracted in format for which azimuth data are colinear.

**B83-10489**  
**OBTAINING RUNGE-KUTTA SOLUTIONS BETWEEN TIME STEPS**

M. K. HORN

Apr. 1984 See Also NASA TM-58239 (N82-21967/NSP)  
**MSC-20404** Vol. 8, No. 1, P. 148

New interpolation method used with existing Runge-Kutta algorithms. Algorithm evaluates solution at intermediate point within integration step. Only few additional computations required to produce intermediate solution data. Runge-Kutta method provides accurate solution with larger time steps than allowable in other methods.

**B83-10490**  
**ALGORITHM FOR CONSTRUCTING CONTOUR PLOTS**

W. JOHNSON and F. SILVA (Informatics, Inc.)  
Apr. 1984

**ARC-11441** Vol. 8, No. 1, P. 148

General computer algorithm developed for construction of contour plots. algorithm accepts as input data values at set of points irregularly distributed over plane. Algorithm based on interpolation scheme: points in plane connected by straight-line segments to form set of triangles. Program written in FORTRAN IV.

**B83-10491**  
**HIDDEN-LINE COMPUTER CODE**

D. R. HEDGLEY JR. (Dryden Flight Research)  
Apr. 1984

**ARC-11446** Vol. 8, No. 1, P. 149

New, efficient solution minimizes run time. Approach based on approved theorem provides formal basis for assuring generality and rapid execution. Theorem does not directly address nuisance of square law growth. Analysis of algorithm shows it tends to avoid square-law growth, and rigorous testing verified algorithm tends to enjoy almost linear growth.

**B83-10492**  
**FLOW CHART FOR MANAGEMENT**

K. A. BLOM (Caltech)  
Apr. 1984

**NPO-15014** Vol. 8, No. 1, P. 149

Flow chart management tool presents organizational/staffing relationships, resource requirements and time dependent product-activity relationships on single chart.

**B83-10493**  
**THREE-LEVEL CONTROL OF MANIPULATORS**

R. L. ZAWACKI (Caltech) and M. I. VUSKOVIC (Caltech)  
Apr. 1984

**NPO-15048** Vol. 8, No. 1, P. 149

Concept for control of remote manipulators based on three-level hierarchy allows complex tasks performed in real time. Developed for interactive human/control with sensory feedback.

**B83-10494**  
**CONTROL OF SELF-REPLICATING SYSTEMS**

G. VON TIESENHAUSEN  
Apr. 1984

**MFS-25865** Vol. 8, No. 1, P. 150

Three concepts proposed for system management and control. Concepts are: internal system for autonomous management and control, separate system for environment monitoring, and optical intelligent system required in especially chaotic environments. Intelligent system responds by making decisions and solving problems in novel situations preprogramed.

**B83-10495**  
**TRAINING SIMULATOR FOR FIRE MANAGEMENT**

K. A. SMITH, R. C. RODRIGUEZ, J. L. RANDOLPH, and

## 09 MATHEMATICS AND INFORMATION SCIENCES

R. T. HOWARD

Apr. 1984

**MFS-25898**

**Vol. 8, No. 1, P. 150**

Users manipulate resources in practicing fire-control strategy. Users manipulate resource information displayed on two separate monitors, as computer-generated messages and computer-controlled fire scenes.

**B83-10496**

**GENERATING RANDOM NUMBER PAIRS**

C. W. CAMPBELL

Apr. 1984

**MFS-27039**

**Vol. 8, No. 1, P. 150**

Algorithm generates pairs drawn from bivariate normal distribution with any desired values of two means, two standard deviations, and correlation coefficient.

**B83-10734**

**EFFICIENT CODING FOR OPTICAL COMMUNICATION**

R. J. MCELIECE (CALTECH)

Dec. 1984

**NPO-15856**

**Vol. 8, No. 2, P. 295**

Possibility of using photon counting, rather than conventional linear amplification, for optical communications discussed. Study suggests combination of pulse-position modulation and Reed-Solomon coding gives signaling efficiency of 3 to 4 bits/photon.

**B83-10735**

**A FILE ARCHIVAL SYSTEM**

J. L. FANSELOW (CALTECH) and J. L. VAVRUS (CALTECH)

Dec. 1984

**NPO-16274**

**Vol. 8, No. 2, P. 295**

ARCH, file archival system for DEC VAX, provides for easy offline storage and retrieval of arbitrary files on DEC VAX system. System designed to eliminate situations that tie up disk space and lead to confusion when different programmers develop different versions of same programs and associated files.

**B83-10736**

**PSEUDO-RANDOM NUMBER GENERATORS**

L. W. HOWELL and M. H. RHEINFURTH

Dec. 1984

**MFS-27017**

**Vol. 8, No. 2, P. 296**

Package features comprehensive selection of probabilistic distributions. Monte Carlo simulations resorted to whenever systems studied not amenable to deterministic analyses or when direct experimentation not feasible. Random numbers having certain specified distribution characteristic integral part of simulations. Package consists of collector of 'pseudorandom' number generators for use in Monte Carlo simulations.

**B83-10737**

**SPIRE DATA-BASE MANAGEMENT SYSTEM**

C. F. FUECHSEL

Dec. 1984

**GSC-12684**

**Vol. 8, No. 2, P. 296**

Spacelab Payload Integration and Rocket Experiment (SPIRE) data-base management system (DBMS) based on relational model of data bases. Data bases typically used for engineering and mission analysis tasks and, unlike most commercially available systems, allow data items and data structures stored in forms suitable for direct analytical computation. SPIRE DBMS designed to support data requests from interactive users as well as applications programs.

**B83-10738**

**FORTTRAN STATIC SOURCE CODE ANALYZER**

P. MERWARTH

Dec. 1984

**GSC-12724**

**Vol. 8, No. 2, P. 297**

FORTTRAN Static Source Code Analyzer program, SAP (DEC VAX version), automatically gathers statistics on

occurrences of statements and structures within FORTRAN program and provides reports of those statistics. Provisions made for weighting each statistic and provide an overall figure of complexity.

**B83-10739**

**SOFTWARE DOCUMENT INVENTORY PROGRAM**

P. D. MERWARTH

Dec. 1984

**GSC-12803**

**Vol. 8, No. 2, P. 297**

Program offers ways to file and locate sources of reference. DOCLIB system consists of two parts to serve needs of two type of users: general user and librarian. DOCLIB systems provides user with interactive, menu-driven document inventory capability.

**B83-10740**

**NAMELIST PREPROCESSOR PROGRAM**

P. D. MERWARTH

Dec. 1984

**GSC-12711**

**Vol. 8, No. 2, P. 297**

NAMELIST Preprocessor Program, NPP, provides DEC VAX with capabilities identical to IBM FORTRAN IV NAMELIST feature. NAMELIST provides FORTRAN programmer with additional, flexible input and output capabilities. Input data reviewed without elaborate formatting.

**B83-10741**

**RESEARCH AND DEVELOPMENT MISSION ANALYSIS SYSTEM**

W. A. TAYLOR (Computer Science Corp.)

Dec. 1984

**GSC-12847**

**Vol. 8, No. 2, P. 297**

Research and Development Mission Analysis System, RADMAS, facilitates solution of mission-analysis problems in research and development environment. System centers on executive structure that controls function selection and executing.

**B83-10742**

**MODERN NUMERICAL METHODS FOR CLASSICAL SAMPLED SYSTEM ANALYSIS-SAMSAN**

H. P. FRISCH

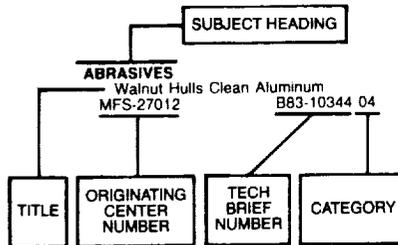

Dec. 1984

**GSC-12827**

**Vol. 8, No. 2, P. 298**

SAMSAN aids control-system analyst by providing self-consistent set of computer algorithms that support large-order control-system design and evaluation studies, with emphasis placed on sampled system analysis. Program provides set of algorithms readily integrated for solving control-system problems.

## Typical Subject Index Listing

The title of each Tech Brief is listed under several selected subject headings to provide the user with a variety of approaches in his search for specific information. The Tech Brief number, e.g., B83-10344, is located under and to the right of the title and is followed by a two-digit number, e.g., 04, which designates the subject category in which the entire entry can be found.

**BAGS**  
Better Seals for Vacuum Bags  
MFS-25875 B83-10216 08

**BAND STRUCTURE OF SOLIDS**  
Multiple-Band-Gap Solar-Cell Concept  
MFS-25724 B83-10517 01

**BANDWIDTH**  
Receiver for Antenna Arrays  
NPO-15089 B83-10015 02

**BARRIER LAYERS**  
Schottky-Barrier Photocell With Intermediate Metal Layer  
GSC-12816 B83-10501 01

**BARRIERS**  
Barrier Self for Hydraulic Actuators  
MSC-20390 B83-10655 06

**BATTERY CHARGERS**  
Charge Efficiency Tests of Lead/Acid Batteries  
NPO-15869 B83-10281 02

**BEAM INJECTION**  
Ion Accelerator Merges Several Beams  
NPO-15547 B83-10540 03

**BEAM SPLITTERS**  
Beam Splitter Introduces Little Aberration  
NPO-15580 B83-10028 03  
Imaging Fluid Flow  
MFS-25897 B83-10543 03  
Laser-Beam Separator  
NPO-15723 B83-10557 03

**BEARINGS**  
Passive Magnetic Bearing  
GSC-12726 B83-10085 07  
Tooling Converts Stock Bearings To Custom Bearings  
LAR-12922 B83-10090 07  
Staked Bearing Removal Tool  
MSC-20337 B83-10093 07

**BOXES (CONTAINERS)**

Portable Roller Staking Tool  
MSC-20281 B83-10208 07  
Testing Bearings in Tight Spaces  
MSC-20250 B83-10210 07  
Ball-and-Socket-Bearing Wear Test  
MFS-19737 B83-10427 07  
Bearing Wear in Large Thermal Gradients  
MFS-25879 B83-10428 07  
Bearing Measuring Fixture  
MFS-19315 B83-10442 07  
Spherical-Bearing Analysis Program  
LEW-13626 B83-10671 07

**BELLOWS**  
Bellows With Longitudinal Beams  
MFS-19633 B83-10713 08

**BENDING**  
Bender/Coiler for Tubing  
MSC-20410 B83-10206 07

**BIMETALS**  
Burner-Injector-Post Tip  
MFS-19827 B83-10683 07

**BIOELECTRICITY**  
Microprocessor-Based Wave Analyzer  
ARC-11388 B83-10046 05

**BIOMASS**  
Solvent Extraction of Furfural From Biomass  
NPO-15987 B83-10599 05

**BISMUTH ALLOYS**  
Solidifying Bi/MnBi at Low Gravity  
MFS-25736 B83-10044 04

**BOLTS**  
Locking Bolt  
MSC-20439 B83-10202 07

**BONDING**  
Reducing the Resistance of Conductive-Adhesive Bonds  
MSC-20427 B83-10219 08  
Liquid-Oxygen-Compatible Cement for Gaskets  
MFS-19797 B83-10466 08  
Ultrasonic Bonding of Solar-Cell Leads  
NPO-16140 B83-10702 08  
Pressure/Vacuum Bonding for Low-Curvature Mirrors  
NPO-15613 B83-10718 08

**BOOLEAN ALGEBRA**  
Self-Checking Memory Interface  
NPO-15889 B83-10521 02

**BORING MACHINES**  
Tool for Guiding An Auger  
MSC-20194 B83-10205 07  
Mechanical Coal-Face Fracturer  
NPO-15847 B83-10419 07  
Continuous Mining Machine  
NPO-15164 B83-10430 07

**BOUNDARY LAYER EQUATIONS**  
Boundary-Layer Equations for Two-Dimensional and Axisymmetric Flow  
LAR-13015 B83-10080 06

**BOUNDARY LAYER FLOW**  
Measuring Surface-Shear Stress in a Wind Tunnel  
ARC-11384 B83-10180 06

**BOUNDARY LAYER STABILITY**  
Compressible Stability Analysis Code For Transition Prediction in Three Dimensional Boundary Layers.  
LAR-13042 B83-10188 06

**BOXES (CONTAINERS)**  
Preserving Color in Developed Photographic Film  
MFS-23250 B83-10037 04

## BRAGG ANGLE

## SUBJECT INDEX

### BRAGG ANGLE

Computation of Bragg Reflection for Layered Microstructures  
NPO-15880 B83-10300 03

### BRAZING

Holding Tubes in Place for Brazing  
MFS-19658 B83-10211 07

### BREADBOARD MODELS

Rapid Circuit Breadboarding  
MFS-25761 B83-10470 08

### BRIDGES (STRUCTURES)

Partial-Payload Support Structure  
MFS-25485 B83-10647 06

### BUBBLES

Imaging Bubble Formation In a Drop Tube  
NPO-15114 B83-10324 03  
Dissolving Bubbles in Glass  
NPO-15105 B83-10347 04

### BUDGETING

Conceptual Cost Estimating  
KSC-11253 B83-10242 09

### BUOYS

Safe Emergency Evacuation From Tall Structures  
KSC-11225 B83-10643 06

### BURNERS

Burner-Injector-Post Tip  
MFS-19827 B83-10683 07

### BUS CONDUCTORS

Hiding Solar-Array Bus Bars  
NPO-15755 B83-10126 01  
Connecting Separate Computers to a Common Bus  
NPO-15433 B83-10289 02

### BUSHINGS

Portable Roller Staking Tool  
MSC-20281 B83-10208 07  
Tool for Replacing Bushings  
MSC-20282 B83-10209 07

## C

### CALCIUM

Calcium Free Asbestos for Fuel Cells  
MSC-20207 B83-10154 04

### CALCULATORS

Solar-Cell Slide Rule  
NPO-15646 B83-10106 08

### CALIBRATING

Digital Phase-Shift Standard  
KSC-11250 B83-10001 01  
Electronic Force Gage for Welders  
MFS-25798 B83-10172 06

### CALORIMETERS

Gas-Temperature Measurement With Minimal Perturbation  
MSC-20338 B83-10061 06

### CAMBERED WINGS

Wing Subsonic Aerodynamic Performance Estimates  
LAR-12987 B83-10079 06  
Calculating the Vortex Lift Effect of Cambered Wings  
LAR-12985 B83-10082 06

### CAPTURE EFFECT

Electron Beam Could Probe Recombination Centers  
NPO-15285 B83-10141 03

### CARBON DIOXIDE

Discharge Extracts Oxygen From CO<sub>2</sub>  
ARC-11305 B83-10334 04

Removing Biostatic Agents From Fermentation Solutions  
NPO-15806 B83-10370 05

### CARBON FIBERS

Stronger Carbon Fibers for Reinforced Plastics  
ARC-11261 B83-10035 04  
Binder for Carbon-Fiber Coating  
NPO-14988 B83-10579 04

### CARBON-CARBON COMPOSITES

Eddy-Current Damage Test for Carbon Composites  
MSC-20358 B83-10177 06

### CARGO

Latch for Stored Cargo  
MFS-25837 B83-10407 07

### CARTS

Transporter for Treated Sheet Materials  
MSC-20332 B83-10204 07

### CASCADE FLOW

PANEL Code for Planar Cascades  
LEW-13862 B83-10190 06

### CASTING

High-Temperature, Low-Gravity Casting Furnace  
MFS-25605 B83-10596 04

### CASTINGS

Tool for Taking Clay Impressions  
MFS-19728 B83-10435 07

### CATALYSTS

Three-Zone Catalyst Resists Sulfur Poisoning  
NPO-14827 B83-10356 04  
Hydrogen Production From Heavy Fuels  
NPO-14826 B83-10362 04  
Catalytic Coal Liquefaction With Iron Sulfate  
NPO-15727 B83-10589 04  
Removing Sulfur Dioxide From Flue Gases  
NPO-15758 B83-10593 04

### CATHODE RAY TUBES

Microcomputer Multiplexes Alphanumeric Labels on CRT's  
MSC-20079 B83-10132 02

### CATHODES

Improved Hollow Cathode  
NPO-15560 B83-10555 03

### CATTLE

Improved Cattle Hauler  
FRC-11058 B83-10020 03

### CEMENTS

Epoxy Grout With Silica Thickener  
NPO-15202 B83-10358 04  
Liquid-Oxygen-Compatible Cement for Gaskets  
MFS-19797 B83-10466 08

### CERAMIC BONDING

Absorbable-Susceptor Welding of Ceramics  
NPO-15640 B83-10217 08

### CERAMIC COATINGS

Cryogenic Separation of a Ceramic From Its Mandrel  
LAR-12904 B83-10717 08

### CERAMICS

Absorbable-Susceptor Welding of Ceramics  
NPO-15640 B83-10217 08  
Ceramic Solar Receiver  
NPO-15769 B83-10314 03  
Ceramics for Solar Receivers  
NPO-15763 B83-10351 04

### CERENKOV RADIATION

Silicone Cerenkov-Radiator Material  
GSC-12805 B83-10328 04

### CHANNELS (DATA TRANSMISSION)

Linking 'Smart' Modules by a Single Channel  
NPO-15342 B83-10134 02

### CHARGE COUPLED DEVICES

Eliminating 'Hotspots' in Digital Image Processing  
NPO-15684 B83-10527 02

### CHARGE EFFICIENCY

Manometer Measures Gas Flow  
NPO-15686 B83-10178 06  
Charge Efficiency Tests of Lead/Acid Batteries  
NPO-15869 B83-10281 02

### CHARGED PARTICLES

Charged Particle Flux Sensor  
MFS-25461 B83-10021 03

### CHARRING

Charring, Nonmelting Epoxy Foams  
MFS-25911 B83-10571 04

### CHEMICAL ANALYSIS

Measuring Diffusion and Recombination Polycrystalline Silicon  
ARC-11431 B83-10040 04

### CHEMICAL ATTACK

Solvent-Resistant Polysulfones  
LAR-12931 B83-10151 04

### CHEMICAL COMPOSITION

Neutron Probe of Building-Wall Composition  
GSC-12808 B83-10541 03

### CHEMICAL LASERS

Fluorine Mixer/Vaporizer for Chemical Lasers  
NPO-15552 B83-10311 03

### CHIPS (ELECTRONICS)

VLSI Unit for Two-Dimensional Convolutions  
NPO-15224 B83-10136 02

### CHLORINATION

Desulfurizing Coal By Chlorinolysis and Hydrogenation  
NPO-15304 B83-10034 04

### CIRCUIT BOARDS

Probe Array for Testing Printed-Circuit Substrates  
GSC-12759 B83-10059 06  
Detecting Defective Solder Bonds  
MFS-25507 B83-10260 01  
Measuring Coating Thickness  
MFS-25633 B83-10398 06

### CIRCUIT BREAKERS

Solid-State dc Circuit Breaker  
MFS-25172 B83-10005 01

### CIRCUITS

Error-Compensated Integrate and Hold  
ARC-11303 B83-10255 01  
Improved High-Current Drive Circuit  
NPO-14938 B83-10269 01

### CLAMPS

Plastic Clamp Retains Clevis Pin  
MFS-19747 B83-10207 07  
Clamp for Attaching Equipment to an I-Beam  
MFS-25510 B83-10429 07

### CLEAN ROOMS

Improving Trace-Ion Sensitivity  
MFS-25766 B83-10333 04

### CLEANING

Robotic Water Blast Cleaner  
MFS-25519 B83-10092 07

**SUBJECT INDEX**

**COMPUTATIONAL FLUID DYNAMICS**

Self-Cleaning Tubular-Membrane Module  
 NPO-15245 B83-10100 07  
 Blowing Dust Away With Electrostatic Wind  
 HQN-10936 B83-10261 01  
 Walnut Hulls Clean Aluminum  
 MFS-27012 B83-10344 04  
**CLEAR AIR TURBULENCE**  
 Searching for Clear-Air Turbulence  
 NPO-15351 B83-10016 02  
**CLEAVAGE**  
 Positioning Vise for Crystal Cleavage  
 GSC-12762 B83-10701 08

**DRILL BITS**  
 Mechanical Coal-Face Fracturer  
 NPO-15847 B83-10419 07

**DRILLING**  
 Drilling Precise Orifices and Slots  
 MSC-20053 B83-10091 07

**DRILLS**  
 Tool for Guiding An Auger  
 MSC-20194 B83-10205 07  
 Tool Enlarges Hard-to-Reach Holes  
 MFS-19789 B83-10413 07

**DROP SIZE**  
 Ultrasonics and Optics Would Control Shot Size  
 NPO-15608 B83-10107 08

**DRYING**  
 Drying Milk With Boiler Exhaust  
 NPO-15923 B83-10297 03  
 Dewatering Peat With Activated Carbon  
 NPO-15113 B83-10365 04

**DUCTED FLOW**  
 Wind Turbine With Concentric Ducts  
 KSC-11191 B83-10086 07

**DYES**  
 Dye Indicators for Acidic or Basic Surface Contamination  
 MFS-19387 B83-10580 04

**DYNAMIC LOADS**  
 Methods for Estimating Payload/Vehicle Design Loads  
 NPO-15550 B83-10184 06

**DYNAMIC STRUCTURAL ANALYSIS**  
 Accuracy Criterion for Structural Calculations  
 NPO-16008 B83-10634 06

**DYNAMOMETERS**  
 Test-Bench Dynamometer  
 NPO-15084 B83-10441 07

**E**

**ECCENTRICITY**  
 Theory for Eccentric and Misaligned Annular Seals  
 MFS-19892 B83-10652 06

**ECONOMIC DEVELOPMENT**  
 Solar-Cell-Manufacturing System  
 MFS-25483 B83-10728 08

**EDDY CURRENTS**  
 Eddy-Current Damage Test for Carbon Composites  
 MSC-20358 B83-10177 06  
 Paint-Thickness Checker  
 KSC-11270 B83-10520 01

**EGRESS**  
 Safe Emergency Evacuation From Tall Structures  
 KSC-11225 B83-10643 06

**EJECTORS**  
 Retention Mechanism for Spinning Objects  
 MFS-25957 B83-10674 07

**ELASTODYNAMICS**  
 Mathematical Instability Criteria for Elastic Structures  
 NPO-15090 B83-10620 06

**ELASTOHYDRODYNAMICS**  
 Thermal Elastohydrodynamic Lubrication of Spur Gears  
 LEW-13528 B83-10213 07  
 Designing More-Efficient Spur Gears  
 LEW-13921 B83-10662 07

**ELASTOMERS**  
 Perfluoroalkylene-Ether Triazine Elastomers  
 ARC-11402 B83-10335 04

**ELECTRIC BATTERIES**  
 Measuring Power Flow in Electric Vehicles  
 NPO-15514 B83-10138 02  
 'Fuel Gage' for Electric Vehicles  
 NPO-15759 B83-10277 02  
 Charge Efficiency Tests of Lead/Acid Batteries  
 NPO-15869 B83-10281 02  
 Estimating the Solubility of Gases in Battery Electrolytes  
 NPO-15610 B83-10321 03

**ELECTRIC COILS**  
 Improved Coil for Hydrogen Dissociators  
 MFS-25638 B83-10262 01

**ELECTRIC CONNECTORS**  
 Improved Connector Shell for Cable Shields  
 NPO-15584 B83-10006 01  
 Conical Electrical Connectors Aline Easily  
 MFS-25211 B83-10251 01  
 Shielding Electric Connectors From Lightning  
 NPO-15688 B83-10511 01  
 Installation/Removal Tool for Screw-Mounted Components  
 MSC-20606 B83-10667 07

**ELECTRIC CONTACTS**  
 Electrolytic Sharpening of Diode-Contact Whiskers  
 NPO-15789 B83-10222 08  
 Conical Electrical Connectors Aline Easily  
 MFS-25211 B83-10251 01  
 Ti/Pd/Cu Contacts for Semiconductor Devices  
 NPO-15043 B83-10268 01

**ELECTRIC EQUIPMENT TESTS**  
 Digital Soldering-Iron Tester  
 MFS-25863 B83-10254 01  
 Transformer and Meter Tester  
 MFS-19708 B83-10681 07

**ELECTRIC FIELDS**  
 Electrostatic Levitator With Feedback Control  
 NPO-15553 B83-10228 08

- Blowing Dust Away With Electrostatic Wind  
 HQN-10936 B83-10261 01  
 Improved Electrostatic Optical System  
 NPO-15774 B83-10302 03

 Polymeric Applications in Electronics  
 NPO-16081 B83-10235 08  
 Low-Cost Alternatives in Hybrid Microcircuit Packaging  
 MFS-25809 B83-10236 08  
 Packaging Nuclear and Chemical Waste for Disposal  
 NPO-15454 B83-10348 04
- ENERGY ABSORPTION**  
 Two-Fluid Solar Pond  
 NPO-15419 B83-10316 03
- ENERGY CONSERVATION**  
 Drying Milk With Boiler Exhaust  
 NPO-15923 B83-10297 03  
 Low-Pressure Alcohol Distillation  
 MFS-25516 B83-10345 04
- ENERGY CONSUMPTION**  
 Energy-Saving Inverter  
 NPO-15291 B83-10500 01

**ENERGY CONVERSION**

Printed Circuit Converts RF Energy  
to dc Power  
LEW-13913 B83-10002 01

Solar-Pond Resources in the United  
States  
NPO-15681 B83-10150 03

Instrumentation and Control for  
Fossil-Energy Processes  
NPO-15581 B83-10531 02

**ENERGY CONVERSION EFFICIENCY**

Multiple-Band-Gap Solar-Cell  
Concept  
MFS-25724 B83-10517 01

Improved Heat-Engine Solar-Energy  
System  
NPO-15762 B83-10560 03

**ENERGY TECHNOLOGY**

Parabolic Solar Collectors  
NPO-15674 B83-10564 03

**ENERGY TRANSFER**

Long Heat Pipe Transports 2.6 kW  
NPO-16017 B83-10608 06

**ENGINE CONTROL**

Feedback Control of Rotor  
Overspeed  
ARC-11404 B83-10668 07

**ENGINE DESIGN**

Off-Design Turbine Modeling  
LEW-13674 B83-10195 06

Staging Two-Phase Turbines  
NPO-15037 B83-10444 07

**ENTRANCES**

Airlock Entry  
NPO-15415 B83-10720 08

**ENVIRONMENT SIMULATION**

The Effect of Cosmic Rays on MSI  
Devices  
NPO-15779 B83-10263 01

**ENVIRONMENT SIMULATORS**

Simulating Atmospheric Turbulence  
MFS-25850 B83-10377 06

**ENVIRONMENTAL MONITORING**

Lightning-Transient Recorder  
NPO-15895 B83-10272 02

Telemetry Speeds Forest-Fire  
Control  
ARC-11438 B83-10279 02

Crystal Microbalance Monitors  
Relative Humidity  
NPO-15493 B83-10388 06

Rain and Dew Detector  
NPO-15370 B83-10405 06

**ENVIRONMENTAL QUALITY**

Effects of Outdoor Soiling on  
Photovoltaic Modules  
NPO-15186 B83-10317 03

**EPOXY MATRIX COMPOSITES**

Low-Weight Inserts for Aluminum  
Honeycomb Panels  
MSC-20227 B83-10116 08

Epoxy Grout With Silica Thickener  
NPO-15202 B83-10358 04

**EPOXY RESINS**

Standards for Epoxies Used in  
Microelectronics  
MFS-25810 B83-10042 04

Measuring Epoxy-Curing Kinetics  
NPO-15710 B83-10152 04

**ERROR ANALYSIS**

Rounding Technique for High-Speed  
Digital Signal Processing  
NPO-15307 B83-10014 02

Power-Measurement Errors Due to  
Instrument Lag  
NPO-15029 B83-10516 01

**ERROR CORRECTING DEVICES**

NRZ Data Asymmetry Corrector and  
Convolutional Encoder  
MSC-20187 B83-10133 02

Error-Compensated Integrate and  
Hold  
ARC-11303 B83-10255 01

Eliminating Doppler Effects in  
Synthetic-Aperture Radar Optical  
Processors  
NPO-14998 B83-10291 02

**ESTIMATING**

Methods for Estimating  
Payload/Vehicle Design Loads  
NPO-15550 B83-10184 06

**ETCHANTS**

Etchants for Some  
Corrosion-Resistant Metals  
MFS-25467 B83-10586 04

**ETCHING**

Modified Fabrication for InGaAsP  
Strip Laser  
LAR-12986 B83-10705 08

**EVACUATING (TRANSPORTATION)**

Safe Emergency Evacuation From  
Tall Structures  
KSC-11225 B83-10643 06

**EVAPORATION**

Evaporation Tower With Prill  
Nozzles  
NPO-15609 B83-10322 03

**EXCAVATION**

Bidirectional Continuous Coal Miner  
NPO-15166 B83-10432 07

Miner for Cutting Entry Passages in  
Coal Seams  
NPO-15167 B83-10433 07

**EXHAUST NOZZLES**

Code Solves Three-Dimensional  
Navier-Stokes Equations  
LAR-12962 B83-10075 06

Transonic, Axisymmetric Flow Over  
Nozzle Afterbodies With Supersonic Jet  
Exhausts  
LAR-12957 B83-10187 06

**EXHAUST SYSTEMS**

Holding Tubes in Place for Brazing  
MFS-19658 B83-10211 07

**EXPANSION**

Hydraulic Tube Expander  
MFS-19731 B83-10682 07

**EXPERIMENT DESIGN**

Designing Flat-Plate Photovoltaic  
Arrays  
NPO-15729 B83-10305 03

**EXPLORATION**

Radar Cuts Subsoil Survey Costs  
KSC-11227 B83-10276 02

**EXPLOSIVE DEVICES**

Low-Shock Pyrotechnic Actuator  
LAR-13198 B83-10636 06

Reusable Release Mechanism  
MSC-20080 B83-10666 07

**EXTENSIONS**

Torque-Wrench Extension Arm  
NPO-15495 B83-10447 07

**EXTENSOMETERS**

Electronic Dilatometer  
GSC-12738 B83-10168 06

Automated Mercury Dilatometer  
NPO-14884 B83-10604 06

**EXTINGUISHING**

Flame-Test Chamber  
NPO-15407 B83-10719 08

**EXTREME ULTRAVIOLET RADIATION**

Computation of Bragg Reflection for  
Layered Microstructures  
NPO-15880 B83-10300 03

**EXTRUDING**

Aromatic Polyimides With Group VI  
Linkages  
LAR-12980 B83-10031 04

Fire-Resistant TFE Extrusions  
MFS-25917 B83-10577 04

**F****FABRICATION**

Measuring Tension in Transistor  
Suspensions

**FAULT TOLERANCE**  
 Continuity/Isolation Checker  
 NPO-15632 B83-10518 01  
 Self-Checking Memory Interface  
 NPO-15889 B83-10521 02

**FEEDBACK CIRCUITS**  
 Band-Pass Amplifier Without Discrete Reactance Elements  
 GSC-12788 B83-10247 01

**FEEDBACK CONTROL**  
 Feedback Control of Rotor Overspeed  
 ARC-11404 B83-10668 07

**FEET (ANATOMY)**  
 Lightweight, Economical Device Alleviates Drop Foot  
 LAR-12259 B83-10165 05

**FERMENTATION**  
 Removing Biostatic Agents From Fermentation Solutions  
 NPO-15806 B83-10370 05

**FERTILIZERS**  
 Generating SiF<sub>4</sub> From H<sub>2</sub>SiF<sub>6</sub>  
 NPO-15721 B83-10155 04

**FIBER COMPOSITES**  
 Fabrication of Graphite/Epoxy Column Elements  
 LAR-12915 B83-10115 08  
 SixNyCz Fibers for Safer Composites  
 MFS-25721 B83-10331 04  
 Making SixNyCz Fibers by Pyrolysis  
 MFS-25621 B83-10585 04

**FIBER OPTICS**  
 Fabricating Grating Couplers on Optical Fibers  
 MSC-20286 B83-10019 03  
 Optical-Fiber-to-Channel-Waveguide Coupler  
 NPO-15555 B83-10029 03  
 Grating Demultiplexers for Optical Signals  
 LAR-12748 AND LAR-12749 B83-10147 03  
 Polymer Bonding of Optical Fibers  
 NPO-15464 B83-10224 08  
 Effect of Temperature on Fiber-Optic Delay  
 NPO-15148 B83-10318 03  
 Stabilizing Fiber-Optic Transmission Lines  
 NPO-15036 B83-10319 03

**FIBER ORIENTATION**  
 Determining the Orientation of Anisotropic Materials  
 MSC-20229 B83-10054 06

**FIBERS**  
 Polycarbosilazane-Resin on Process  
 MFS-25758 B83-10330 04  
 Fabrication of Multi-Ply Birefringent Fibrous Composite Laminates  
 LAR-12960 B83-10704 08

**FIELD EFFECT TRANSISTORS**  
 Using a PFET To Commutate an SCR  
 NPO-15282 B83-10253 01

Improved High-Current Drive Circuit  
 NPO-14938 B83-10269 01  
 Energy-Saving Inverter  
 NPO-15291 B83-10500 01

**FILLERS**  
 Pull Test Verifies Gap Loading  
 MSC-20231 B83-10119 08  
 Polyurethane Filler for Electroplating  
 MFS-19851 B83-10695 08

**FILM THICKNESS**  
 Paint-Thickness Checker  
 KSC-11270 B83-10520 01

## FUSIBILITY

## SUBJECT INDEX

### FUSIBILITY

Automated Variable-Polarity  
Plasma-Arc Welding  
MFS-27042 B83-10722 08

### FUSION

Hollow-Sphere Production Line  
NPO-15592 B83-10230 08

## G

### GALLIUM ARSENIDE LASERS

Modified Fabrication for InGaAsP  
Strip Laser  
LAR-12986 B83-10705 08

### GALLIUM ARSENIDES

Low-Cost GaAs Solar Cells  
NPO-14914 B83-10476 08

### GAPS

Gage Measures Recessed Gaps  
MSC-20230 B83-10089 07  
Pull Test Verifies Gap Loading  
MSC-20231 B83-10119 08

### GAS CHROMATOGRAPHY

Measuring Diffusion and  
Recombination Polycrystalline Silicon  
ARC-11431 B83-10040 04  
Leak Tester for Cryogenic Flowlines  
MSC-20233 B83-10174 06  
Measuring Trace Hydrocarbons in  
Silanes  
NPO-15273 B83-10359 04

### GAS DETECTORS

Improved O<sub>2</sub>/H<sub>2</sub> Gas Mixture  
Sensor  
MSC-20408 B83-10156 04  
Detecting Methane Leaks  
NPO-15790 B83-10329 04

### GAS DISSOCIATION

Nitrogen Supply Uses Hydrazine  
ARC-11464 B83-10343 04

### GAS FLOW

Discriminating Between Liquid and  
Gas Flows  
NPO-15531 B83-10050 06  
Measuring Small Leak Holes  
MSC-20113 B83-10063 06  
Pressure Reducer for Coal Gasifiers  
NPO-15100 B83-10084 07  
Swirl Diffuser  
MSC-18996 B83-10173 06  
Manometer Measures Gas Flow  
NPO-15686 B83-10178 06  
Transonic Airfoil Analysis  
ARC-11436 B83-10395 06

### GAS LUBRICANTS

Air-Lubricated Lead Screw  
NPO-15617 B83-10101 07

### GAS MIXTURES

Fuel-Cell Reactant-Gas Purifier  
MSC-20103 B83-10032 04  
Improved O<sub>2</sub>/H<sub>2</sub> Gas Mixture  
Sensor  
MSC-20408 B83-10156 04

### GAS PIPES

Expander for Thin-Wall Tubing  
MFS-19739 B83-10203 07

### GAS TEMPERATURE

Gas-Temperature Measurement With  
Minimal Perturbation  
MSC-20338 B83-10061 06  
Measuring High Gas Temperatures  
LEW-13819 B83-10627 06

### GAS TURBINES

Radially-Graduated  
ture Profile  
MFS-19831 B83-10607 06

### GAS WELDING

Coil Welding Aid  
MSC-20470 B83-10088 07

### GASEOUS DIFFUSION

Swirl Diffuser  
MSC-18996 B83-10173 06

### GEARS

Thermal Elastohydrodynamic  
Lubrication of Spur Gears  
LEW-13528 B83-10213 07  
Designing More-Efficient Spur Gears  
LEW-13921 B83-10662 07

### GEOMETRY

Optimizing Grid Patterns on  
Photovoltaic Cells  
NPO-15841 B83-10709 08

### GEOSYNCHRONOUS ORBITS

Monte Carlo Investigation of  
Trajectories  
GSC-12705 B83-10074 06

### GERT

Information-Systems Data-Flow  
Diagram  
NPO-15492 B83-10121 09  
Subcritical Wing Design Code  
LAR-12959 B83-10193 06

### GLASS

Freeze/Thaw Properties of Cellular  
Glass  
NPO-15854 B83-10162 04  
Dielectric Scanning Locates Voids in  
Glass Foam  
NPO-15728 B83-10176 06  
Fabrication of Structural Cellular  
Glass  
NPO-15731 B83-10223 08  
Producing Metallic Glasses With  
Acoustic Levitation  
NPO-15658 B83-10231 08  
Evaluation of Structural Cellular  
Glass  
NPO-15680 B83-10339 04  
Dissolving Bubbles in Glass  
NPO-15105 B83-10347 04  
Glass for Solar Concentrators  
NPO-14923 B83-10354 04  
Containerless Processing of  
Advanced Glasses  
MFS-27002 B83-10581 04  
Hollow Spheres of Metallic Glass  
NPO-15991 B83-10583 04

### GLASS COATINGS

Two-Layer Glass Thermal-Control  
Coating  
ARC-11164 B83-10573 04

### GLASS FIBER REINFORCED

PLASTICS  
Fabrication of Multi-Ply Birefringent  
Fibrous Composite Laminates  
LAR-12960 B83-10704 08

### GLASS FIBERS

Collecting Light From Point Images  
NPO-15887 B83-10542 03

### GLYCOGENS

Yeasts With Increased Glycogen  
Levels  
NPO-15571 B83-10601 05

### GLYCOLS

Gelled Anti-icing Agents  
MSC-20088 B83-10036 04  
Modified Antifreeze Liquids for Use  
on Surfaces  
MFS-25741 B83-10043 04

### GORES

Testing Large Solar Mirrors  
NPO-15404 B83-10294 03

### GRAIN BOUNDARIES

Microfissuring in Alloys During  
Welding  
MFS-25604 B83-10725 08

### GRAPHITE-EPOXY COMPOSITES

More-Uniform Heat Curing for  
Structural Repairs  
MSC-20101 B83-10114 08  
Fabrication of Graphite/Epoxy  
Column Elements  
LAR-12915 B83-10115 08  
Electronic Dilatometer  
GSC-12738 B83-10168 06  
Strain Analysis of Graphite/Epoxy  
Vessels  
MFS-27018 B83-10714 08

### GRAPHS (CHARTS)

Estimating Waveguide Feed  
Directivity and Spacing  
NPO-15603 B83-10144 03  
Determining Normal-Distribution  
Tolerance Bounds Graphically  
MSC-20115 B83-10238 09

### GRATINGS (SPECTRA)

Fabricating Grating Couplers on  
Optical Fibers  
MSC-20286 B83-10019 03  
Simplified Laser Tuning  
NPO-15690 B83-10308 03  
Optical Measurement of Particle Size  
and Velocity  
MFS-27036 B83-10554 03  
Efficiency of Reflection Gratings  
NPO-15852 B83-10567 03

### GRINDING MACHINES

Tooling Converts Stock Bearings To  
Custom Bearings  
LAR-12922 B83-10090 07  
Air Guide for Sheet-Metal Grinder  
MFS-19788 B83-10423 07  
Controlling Sanding Depth  
MFS-19713 B83-10438 07

### GROUND TESTS

In Situ Measurement of  
Ground-Surface Flow Resistivity  
LAR-13053 B83-10606 06

### GROUT

Epoxy Grout With Silica Thickener  
NPO-15202 B83-10358 04

### GUIDANCE (MOTION)

Automatic Guidance System for  
Welding Torches  
MFS-25807 B83-10690 08

### GUIDANCE SENSORS

Sun Tracker Operates a Year  
Between Calibrations  
NPO-15810 B83-10546 03

### GUSTS

Simulating Atmospheric Turbulence  
MFS-25850 B83-10377 06

## H

### HALIDES

Controlling Metal-Halide Vapor  
Density in Lasers  
NPO-15021 B83-10310 03

### HANDBOOKS

Electronic-Power-Transformer Design

 Variable-Conductance Heat-Transfer  
 Module  
 GSC-12771 B83-10408 07

**HEAT TRANSMISSION**  
 Low-Thermal-Resistance Baseplate  
 Mounting  
 MFS-25908 B83-10613 06

**HEAT TREATMENT**  
 More-Uniform Heat Curing for  
 Structural Repairs  
 MSC-20101 B83-10114 08  
 Additional Heat Treatment for  
 Silica-Fiber Insulation  
 MSC-20600 B83-10588 04  
 Heater Ensures Strain-Gage Bond  
 Reliability  
 MFS-19859 B83-10619 06  
 Securing Identification Sleeving  
 MFS-19685 B83-10716 08

**HEATING**  
 Furnace for Rapid Heating and  
 Cooling  
 MFS-25707 B83-10597 04

**HEATING EQUIPMENT**  
 Improving A Guarded Hotplate  
 MSC-20447 B83-10069 06  
 Hot-Melt Adhesive Attachment  
 System  
 LAR-12894 B83-10109 08  
 Gas-Bearing Crucible for Shot  
 Tower  
 NPO-15070 B83-10229 08  
 Improved Silicon-Growth Chamber  
 NPO-15237 B83-10471 08  
 Toroidal Ellipsoid Float-Zone Heater  
 MFS-25771 B83-10711 08

**HELICAL WINDINGS**  
 Bender/Coiler for Tubing  
 MSC-20410 B83-10206 07

**HETERODYNING**  
 Directional Coupler With Increased  
 Directivity  
 NPO-15892 B83-10252 01

**HIGH PASS FILTERS**  
 Laser Diode Schlieren Photography  
 LAR-12897 B83-10559 03

**HIGH TEMPERATURE LUBRICANTS**  
 Thermal Elastohydrodynamic  
 Lubrication of Spur Gears  
 LEW-13528 B83-10213 07

**HIGH TEMPERATURE TESTS**  
 J-Channel Locks Potting to  
 Compression Panel  
 LAR-12913 B83-10179 06

**HISTOGRAMS**  
 Digital-Image Enhancement  
 MFS-25679 B83-10530 02

**HOLDERS**  
 Sample Holder for Cryogenic  
 Adhesive Shear Test  
 MFS-25729 B83-10060 06  
 Holder for Fragile Parts  
 MFS-25772 B83-10212 07

**HOLLOW CATHODES**  
 Improved Hollow Cathode  
 NPO-15560 B83-10555 03

**HOLOGRAPHIC INTERFEROMETRY**  
 Holographic Twyman-Green  
 Interferometer  
 NPO-15754 B83-10301 03

**HOLOGRAPHY**  
 Efficiency of Reflection Gratings  
 NPO-15852 B83-10567 03

**HOMOPOLAR GENERATORS**  
 Brushless Low-Speed dc  
 Tachometer  
 NPO-15706 B83-10650 06

**HYDROGENATION**

**HONEYCOMB STRUCTURES**  
 High-Absorptance Radiative Heat  
 Sink  
 GSC-12739 B83-10110 08  
 Low-Weight Inserts for Aluminum  
 Honeycomb Panels  
 MSC-20227 B83-10116 08  
 Saltless Solar Ponds  
 NPO-15808 B83-10563 03

**HOT WORKING**  
 Hot Microfissuring in Nickel Alloy  
 MFS-25763 B83-10587 04  
 Hot Forming With Electron-Beam  
 Welder  
 MSC-20413 B83-10724 08

**HUMAN FACTORS ENGINEERING**  
 Adjustable Walker for the  
 Handicapped  
 LAR-12990 B83-10369 05  
 Three-Fingered Robot Hand  
 NPO-15959 B83-10409 07  
 Control-Chain Safety Tray and  
 Friction Pull  
 MSC-20401 B83-10416 07  
 Three-Level Control of Manipulators  
 NPO-15048 B83-10493 09

**HUMIDITY MEASUREMENT**  
 Crystal Microbalance Monitors  
 Relative Humidity  
 NPO-15493 B83-10388 06

**HYBRID CIRCUITS**  
 Low-Cost Alternatives in Hybrid  
 Microcircuit Packaging  
 MFS-25809 B83-10236 08

**HYBRID STRUCTURES**  
 Decoupling a Reflecting Layer From  
 Its Support Structure  
 NPO-15346 B83-10486 08

**HYDRAULIC EQUIPMENT**  
 Hydraulic Tube Expander  
 MFS-19731 B83-10682 07

**HYDRAULIC JETS**  
 Robotic Water Blast Cleaner  
 MFS-25519 B83-10092 07

**HYDROCARBON FUELS**  
 Three-Zone Catalyst Resists Sulfur  
 Poisoning  
 NPO-14827 B83-10356 04

**HYDROCARBONS**  
 Measuring Diffusion and  
 Recombination Polycrystalline Silicon  
 ARC-11431 B83-10040 04

**HYDROGEN**  
 Cooling by Para-to-Ortho-Hydrogen  
 Conversion  
 GSC-12770 B83-10024 03  
 Improved Coil for Hydrogen  
 Dissociators  
 MFS-25638 B83-10262 01

**HYDROGEN COMPOUNDS**  
 Supercritical-Multiple-Solvent  
 on From Coal  
 NPO-15767 B83-10153 04

**HYDROGEN MASERS**  
 Hydrogen Masers as Time and  
 Frequency Standards  
 NPO-15858 B83-10298 03

**HYDROGEN PRODUCTION**  
 Hydrogen Production From Heavy  
 Fuels  
 NPO-14826 B83-10362 04

**HYDROGENATION**  
 Desulfurizing Coal By Chlorinolysis  
 and Hydrogenation  
 NPO-15304 B83-10034 04

**HYDROTHERMAL SYSTEMS**

Solar-Pond Resources in the United States  
NPO-15681 B83-10150 03

**HYGROMETERS**

Trace-Level Solid-Polymer Electrolyte Hygrometer  
NPO-15722 B83-10645 06

I

**ICE ENVIRONMENTS**

Antenna for Imaging Sea Ice  
NPO-15352 B83-10271 01

**ICE MAPPING**

Radar for Mapping Sea Ice  
NPO-15350 B83-10135 02

**ICE PREVENTION**

Gelled Anti-icing Agents  
MSC-20088 B83-10036 04  
Modified Antifreeze Liquids for Use on Surfaces  
MFS-25741 B83-10043 04

**ICOSAHEDRONS**

General-Purpose Icosahedral Structure  
GSC-12854 B83-10612 06

**IDLERS**

Wire Electrical-Discharge Machining Aid  
MFS-19643 B83-10686 07

**IMAGE ENHANCEMENT**

Interstitial Digital-Image-Point Generator  
MFS-25871 B83-10525 02  
Digital-Image Enhancement  
MFS-25679 B83-10530 02

**IMAGE PROCESSING**

Sharp-Focus Composite Microscope Imaging by Computer  
NPO-15207 B83-10167 05  
Pairwise Comparison of Voltage Sets  
LAR-12929 B83-10256 01  
Digital SAR Processor  
NPO-15519 B83-10287 02  
Eliminating 'Hotspots' in Digital Image Processing  
NPO-15684 B83-10527 02  
Collecting Light From Point Images  
NPO-15887 B83-10542 03

**IMAGE RECONSTRUCTION**

Sharp-Focus Composite Microscope Imaging by Computer  
NPO-15207 B83-10167 05

**IMAGE RESOLUTION**

Interstitial Digital-Image-Point Generator  
MFS-25871 B83-10525 02  
Improved Gamma-and X-Ray Pinhole Camera  
GSC-12851 B83-10539 03  
High-Resolution X-Ray Telescope  
NPO-15971 B83-10551 03

**IMAGING TECHNIQUES**

Normal-Incidence Soft-X-Ray Mirror  
NPO-15828 B83-10145 03  
Imaging Bubble Formation In a Drop Tube  
NPO-15114 B83-10324 03  
Acoustic Imaging of Combustion Noise  
NPO-15698 B83-10547 03  
Lensless Image Scanner  
NPO-16004 B83-10553 03

**IMPACT RESISTANCE**

Acoustic Design Improves Composite Impact Resistance  
LAR-12887 B83-10375 06

**IMPACT TESTS**

Modified Oscillograph for Impacting Composite Materials  
MFS-25901 B83-10406 06

**IMPURITIES**

Solar-Cell Slide Rule  
NPO-15646 B83-10106 08  
Sampling of Silicon Powder for Impurity Analysis  
NPO-15840 B83-10590 04

**INCIDENCE**

Normal-Incidence Soft-X-Ray Mirror  
NPO-15828 B83-10145 03

**INCOMPRESSIBLE FLOW**

Multivalued-Velocity-Field Model of Turbulence  
NPO-15748 B83-10183 06

**INCONEL (TRADEMARK)**

Checking Weld Composition  
MFS-19628 B83-10481 08

**INDUCTION HEATING**

Absorbable-Susceptor Welding of Ceramics  
NPO-15640 B83-10217 08

**INDUCTION MOTORS**

Digital Single-Phase Power-Factor Controller  
MFS-25861 B83-10125 01

**INDUCTORS**

Improved Two-Phase Switching Regulator  
NPO-15172 B83-10267 01

**INDUSTRIAL PLANTS**

Controlling Industrial Noise  
LAR-13001 B83-10030 03

**INDUSTRIAL WASTES**

Recycling Lithium Carbonate/Lithium Hydroxide Waste  
KSC-11261 B83-10033 04

**INELASTIC STRESS**

Mathematical Instability Criteria for Elastic Structures  
NPO-15090 B83-10620 06

**INFORMATION DISSEMINATION**

Automatic Control of Multimedia Shows  
KSC-11080 B83-10286 02

**INFORMATION SYSTEMS**

Information-Systems Data-Flow Diagram  
NPO-15492 B83-10121 09

**INFRARED DETECTORS**

Uncooled IR Detector  
NPO-14832 B83-10265 01  
Growing Crystals for Infrared Detectors  
MFS-25786 B83-10465 08

**INFRARED SCANNERS**

Improved Infrared Multispectral Scanner  
NPO-16143 B83-10552 03

**INPUT/OUTPUT ROUTINES**

NAMELIST Preprocessor Program  
GSC-12711 B83-10740 09

**INSERTS**

Low-Weight Inserts for Aluminum Honeycomb Panels  
MSC-20227 B83-10116 08  
Feedthrough Seal For High-Pressure Vessel  
MSC-20625 B83-10502 01  
Burner-Injector-Post Tip  
MFS-19827 B83-10683 07

**INSPECTION**

Quality-Planning-Requirements  
MSC-20280 B83-10233 08  
Eddy-Current Inspection of Narrow Metal Tubes  
MFS-19742 B83-10374 06  
Inspecting Joints With Grooved Surfaces  
MFS-25934 B83-10640 06

**INSTALLING**

Retaining-Ring Installation Tool  
MFS-19725 B83-10098 07  
Portable Roller Staking Tool  
MSC-20281 B83-10208 07

**INSTRUMENT COMPENSATION**

Sun Tracker Operates a Year Between Calibrations  
NPO-15810 B83-10546 03

**INSTRUMENT ERRORS**

Power-Measurement Errors Due to Instrument Lag  
NPO-15029 B83-10516 01

**INSTRUMENTS**

Electronically-Scanned Form Spectrometer  
NPO-15844 B83-10292 02

**INSULATION**

Shell-Tile Thermal-Protection System  
LAR-12862 B83-10051 06  
Improving A Guarded Hotplate  
MSC-20447 B83-10069 06  
J-Channel Locks Potting to Compression Panel  
LAR-12913 B83-10179 06  
Stripper for Cables of Any Cross Section  
NPO-15631 B83-10443 07  
Better Thermal Insulation in Solar-Array Laminators  
NPO-15925 B83-10451 08  
Repairing Damaged Power-Cable Insulation  
KSC-11206 B83-10464 08  
Plasma-Sprayed Copper Tie-In for Nickel Plating  
MFS-19481 B83-10584 04  
Bonded Lockstitch for Insulating Blankets  
MSC-20283 B83-10688 08

**INSULATORS**

Sialon Electrodes and Insulators for MHD Device  
NPO-14945 B83-10352 04  
Predicting Thermal Conductivity  
MFS-25732 B83-10400 06

**INTEGRAL TRANSFORMATIONS**

Pseudo-Random Number Generators  
MFS-27017 B83-10736 09

**INTEGRATED CIRCUITS**

VLSI Unit for Two-Dimensional Convolutions  
NPO-15224 B83-10136 02  
Test Pattern for IC's  
NPO-15648 B83-10232 08  
Infrared-Responsive Monolithic MOS Circuit  
GSC-12782 B83-10497 01  
Optical Testing of Integrated Circuits  
MFS-25498 B83-10508 01  
Miniature Temperature-Control Circuit  
LAR-12900 B83-10515 01

- Hardware Fault Simulator Generates Test Vectors For Complex IC's  
NPO-15362 B83-10538 02  
Processes for VLSI Circuits  
MFS-25857 B83-10708 08

## MACHINE TOOLS

- Machining Three Prongs on a Shaft  
MFS-19729 B83-10099 07  
Hole-Center Locating Tool  
KSC-11248 B83-10412 07  
Drilling Holes on a Large Bolt Circle  
KSC-11115 B83-10434 07  
Controlling Sanding Depth  
MFS-19713 B83-10438 07  
Measuring Recessed Pins  
MFS-19673 B83-10439 07  
Tube Alignment for Machining  
MFS-19719 B83-10663 07  
Transformer and Meter Tester  
MFS-19708 B83-10681 07  
Attaching Chuck Keys to Machine Tools  
KSC-11249 B83-10684 07

## MACHINING

- Electrochemical Deburring  
MFS-19693 B83-10087 07  
Tooling Converts Stock Bearings To Custom Bearings  
LAR-12922 B83-10090 07  
Drilling Precise Orifices and Slots  
MSC-20053 B83-10091 07  
Value-Engineering Review for Numerical Control  
MFS-19664 B83-10480 08  
Tube Alignment for Machining  
MFS-19719 B83-10663 07

## MAGNETIC MATERIALS

- Solidifying Bi/MnBi at Low Gravity  
MFS-25736 B83-10044 04  
Passive Magnetic Bearing  
GSC-12726 B83-10085 07

## MAGNETIC PERMEABILITY

- Automated Magnetic Susceptibility Analysis  
MFS-25935 B83-10592 04

## MAGNETOHYDRODYNAMIC

## ORS

- Sialon Electrodes and Insulators for MHD Device  
NPO-14945 B83-10352 04

## MAINTENANCE

- Tool for Replacing Bushings  
MSC-20282 B83-10209 07  
Testing Bearings in Tight Spaces  
MSC-20250 B83-10210 07  
Repairing Damaged Power-Cable Insulation  
KSC-11206 B83-10464 08

## MAN ENVIRONMENT INTERACTIONS

- Control of Self-Replicating Systems  
MFS-25865 B83-10494 09

## MANAGEMENT ANALYSIS

- Control of Self-Replicating Systems  
MFS-25865 B83-10494 09

## MANAGEMENT

## SYSTEMS

- Large-Scale Software Management System  
KSC-11230 B83-10122 09  
Forest Resource Information System  
MSC-20270 B83-10245 09  
Flow Chart for Management  
NPO-15014 B83-10492 09

## MANAGEMENT PLANNING

- Flow Chart for Management  
NPO-15014 B83-10492 09

## MANAGEMENT SYSTEMS

- A File Archival System  
NPO-16274 B83-10735 09

## MANEUVERABILITY

- The Mission Radius and Maneuverability Characteristics of Fighter Aircraft  
LAR-12908 B83-10631 06

## MANEUVERS

- Mathematical Simulation of Flight Maneuvers  
NPO-15395 B83-10644 06

## MANGANESE ALLOYS

- Solidifying Bi/MnBi at Low Gravity  
MFS-25736 B83-10044 04

## MANIFOLDS

- Holding Tubes in Place for Brazing  
MFS-19658 B83-10211 07

## MANIPULATORS

- Remote Manipulator Has Relistic 'Feel'  
NPO-15065 B83-10083 07  
Holder for Fragile Parts  
MFS-25772 B83-10212 07  
Three-Level Control of Manipulators  
NPO-15048 B83-10493 09  
Displaying Force and Torque of A Manipulator  
NPO-15942 B83-10529 02

## MANOMETERS

- Manometer Measures Gas Flow  
NPO-15686 B83-10178 06

## MANUALS

- Polymeric Applications in Electronics  
NPO-16081 B83-10235 08

## MANUFACTURING

- Quality-Planning-Requirements  
ments  
MSC-20280 B83-10233 08  
Combined Silane Pyrolysis and Silicon-Particle Melt  
NPO-15510 B83-10357 04  
Low-Contamination Vibrating Feeder for Silicon Chips  
NPO-15128 B83-10445 07  
Sonic-Pump Levitator  
MFS-25828 B83-10462 08

## MAPPING

- Algorithm for Constructing Contour Plots  
ARC-11441 B83-10490 09

## MARKING

- Labeling Solar-Cell Modules  
NPO-15997 B83-10454 08  
Securing Identification Sleeving  
MFS-19685 B83-10716 08

## MARTENSITIC STAINLESS STEELS

- Stress-Corrosion Cracking in Martensitic PH Stainless Steels  
MFS-25400 B83-10342 04

## MATERIALS HANDLING

- Transporter for Treated Sheet Materials  
MSC-20332 B83-10204 07  
Fluid/Vapor Separator for Variable Flow Rates  
ARC-11401 B83-10299 03  
Shuttle-Car System for Continuous Mining  
NPO-15949 B83-10418 07  
Handling Fixture for Solar-Cell Arrays  
NPO-15908 B83-10450 08  
Off-Resonance Acoustic Levitation Without Rotation  
NPO-15634 B83-10461 08  
Containerless-Processing Module  
NPO-14932 B83-10479 08

## MECHANICAL MEASUREMENT

- Thermal and Flow Data From Liquid-Oxygen System  
KSC-11265 B83-10635 06

## MATERIALS RECOVERY

- Recycling Lithium Carbonate/Lithium Hydroxide Waste  
KSC-11261 B83-10033 04  
Generating SiF<sub>4</sub> From H<sub>2</sub>SiF<sub>6</sub>  
NPO-15721 B83-10155 04  
Recovering Zinc From Discarded Tires  
NPO-16046 B83-10568 04  
Cryogenic Separation of a Ceramic From Its Mandrel  
LAR-12904 B83-10717 08

## MATHEMATICAL MODELS

- Time-Domain Modal Vibration Identification  
LAR-12924 B83-10072 06  
Thermal Radiation Model  
Renodalization  
MSC-20348 B83-10073 06  
Multivalued-Velocity-Field Model of Turbulence  
NPO-15748 B83-10183 06  
Dissociated Airflow Effects During Plasma-Arc Testing  
MSC-20522 B83-10185 06  
Steady, Nonrotating, Blade-to-Blade Potential Transonic Cascade Flow Analysis Code  
LEW-13854 B83-10189 06

## MEASURING INSTRUMENTS

- Measuring Excess Noise in SDL's  
LAR-12938 B83-10004 01  
Portable Pallet-Weighing Apparatus  
GSC-12789 B83-10066 06  
Circuitry for Angle Measurements  
MFS-25825 B83-10137 02  
Measuring Power Flow in Electric Vehicles  
NPO-15514 B83-10138 02  
Portable Data Logger for Photovoltaic Panels  
NPO-15158 B83-10139 02  
Measuring Surface-Shear Stress in a Wind Tunnel  
ARC-11384 B83-10180 06  
Pulse Response Yields Battery Charge State  
NPO-14882 B83-10285 02  
Measuring Coating Thickness  
MFS-25633 B83-10398 06  
Determining Frost Depth and Density  
MFS-25754 B83-10403 06  
Automated Magnetic Susceptibility Analysis  
MFS-25935 B83-10592 04

## MECHANICAL DEVICES

- Miniature Rotator  
LAR-12765 B83-10675 07  
Aligning Solder Pads on a Solar Cell  
NPO-15298 B83-10732 08

## MECHANICAL DRIVES

- Coaxial Redundant Drives  
MFS-25171 B83-10197 07

## MECHANICAL MEASUREMENT

- Eddy-Current Inspection of Narrow Metal Tubes  
MFS-19742 B83-10374 06  
Tool for Tightening Bolts With Knurled Heads  
MFS-25694 B83-10436 07  
Depth Gage for Threaded Holes  
MFS-19884 B83-10672 07

MSC-20318 B83-10052 06  
Tool for Taking Clay Impressions  
MFS-19728 B83-10435 07

**MOLECULAR BEAM EPITAXY**

IC Fabrication Methods Improve  
Laser Diodes  
LAR-13059 B83-10692 08

**MOLECULAR BEAMS**

Improved Electrostatic Optical  
System  
NPO-15774 B83-10302 03

**MONITORS**

Detecting Solar-Cell Failures  
NPO-15741 B83-10129 01  
Improved 02/H2 Gas Mixture  
Sensor  
MSC-20408 B83-10156 04  
Electronic Force Gage for Welders  
MFS-25798 B83-10172 06  
Status Panel For Video Cassette  
Recorders  
KSC-11254 B83-10532 02

**MONOTECTIC ALLOYS**

Directional Solidification of  
Monotectic Alloys  
MFS-25767 B83-10157 04  
Directional Solidification of  
Monotectic Alloys  
MFS-25767 B83-10159 04

**MONTE CARLO METHOD**

Monte Carlo Investigation of  
Trajectories  
GSC-12705 B83-10074 06  
Pseudo-Random Number  
Generators  
MFS-27017 B83-10736 09

**MOTION SIMULATORS**

Task Board Tests Manipulator  
Performance  
NPO-15150 B83-10070 06

**MOTORS**

Reciprocating Linear Electric Motor  
GSC-12773 B83-10421 07

**MOUNTING**

Torque Compensator for Mirror  
Mountings  
GSC-12742 B83-10169 06  
Shock Mounting for Heavy Machines  
MFS-25888 B83-10420 07  
Decoupling a Reflecting Layer From  
Its Support Structure  
NPO-15346 B83-10486 08  
Low-Thermal-Resistance Baseplate  
Mounting  
MFS-25908 B83-10613 06  
Internally Mounting Strain Gages  
GSC-12824 B83-10618 06  
Installation/Removal Tool for  
Screw-Mounted Components  
MSC-20606 B83-10667 07

**MULTIPLEXING**

Microcomputer Multiplexes  
Alphanumeric Labels on CRT's  
MSC-20079 B83-10132 02

**MULTISPECTRAL BAND SCANNERS**

Improved Infrared Multispectral  
Scanner  
NPO-16143 B83-10552 03

**N**

**NAVIER-STOKES EQUATION**

Code Solves Three-Dimensional  
Navier-Stokes Equations  
LAR-12962 B83-10075 06

**NAVIGATION AIDS**

Determining Aircraft Altitude  
NPO-15386 B83-10402 06

**NERVES**

Microprocessor-Based  
Wave Analyzer  
ARC-11388 B83-10046 05

**NETWORK CONTROL**

Solid-State Crossbar Switch  
NPO-15066 B83-10259 01

**NEURONS**

Microprocessor-Based  
Wave Analyzer  
ARC-11388 B83-10046 05

**NEUTRON ACTIVATION ANALYSIS**

Neutron Probe of Building-Wall  
Composition  
GSC-12808 B83-10541 03

**NEWTON-RAPHSON METHOD**

Harmonic-Balance Algorithm for  
Nonlinear Systems  
MFS-25821 B83-10239 09

**NICKEL ALLOYS**

Microfissuring in Nickel-Based-Alloy  
Welds  
MFS-25815 B83-10340 04  
Hot Microfissuring in Nickel Alloy  
MFS-25763 B83-10587 04

**NICKEL CADMIUM BATTERIES**

Measuring Elastic Modulus of  
Sintered Metal  
NPO-15589 B83-10055 06  
Estimating the Lifetimes of  
Nickel/Cadmium Cells  
NPO-15145 B83-10576 04

**NICKEL PLATE**

Plasma-Sprayed Copper Tie-In for  
Nickel Plating  
MFS-19481 B83-10584 04

**NIObIUM ALLOYS**

X-Ray-Diffraction Analysis of Nb/Ge  
Alloys  
MFS-27038 B83-10594 04

**NITROGEN**

Nitrogen Supply Uses Hydrazine  
ARC-11464 B83-10343 04

**NOISE INTENSITY**

Predicting Aircraft Noise Levels  
LEW-13778 B83-10077 06

**NOISE MEASUREMENT**

Measuring Excess Noise in SDL's  
LAR-12938 B83-10004 01  
Noise Control in Propeller-Driven  
Aircraft  
LAR-12954 B83-10049 06

Solar-Pond Resources in the United  
States  
NPO-15681 B83-10150 03

**PORTABLE EQUIPMENT**

Portable Pallet-Weighing Apparatus  
GSC-12789 B83-10066 06  
Portable X-Y Scanner  
MFS-25687 B83-10411 07  
Portable Plating System  
MFS-19631 B83-10483 08  
Portable Fatigue-Testing Machine  
MFS-19459 B83-10649 06  
Transportable Pumps Could Save Oil  
Cargoes  
MFS-25881 B83-10660 07  
Portable Power Broach  
MFS-19679 B83-10678 07

**POSITION INDICATORS**

Determining Aircraft Altitude  
NPO-15386 B83-10402 06  
Display for Mining-Machine  
Operators  
MFS-25955 B83-10535 02

**POSITIONING DEVICES (MACHINERY)**

Coil Welding Aid  
MSC-20470 B83-10088 07  
Holder for Fragile Parts  
MFS-25772 B83-10212 07  
Portable X-Y Scanner  
MFS-25687 B83-10411 07  
Tool Support Ring  
MFS-19765 B83-10665 07  
Miniature Rotator  
LAR-12765 B83-10675 07  
Positioning Vise for Crystal  
Cleavage  
GSC-12762 B83-10701 08  
Frame Allines Fibers in Multilayer  
Composites  
MFS-25959 B83-10706 08

**POTTING COMPOUNDS**

J-Channel Locks Potting to  
Compression Panel  
LAR-12913 B83-10179 06  
Repairable Encapsulated Electronic  
Modules  
NPO-15079 B83-10703 08

**POWDER METALLURGY**

Predicting Singered-Metal Resistivity  
From Porosity  
NPO-15587 B83-10158 04

**POWER CONDITIONING**

Phase Detector for Power-Factor  
Controller  
MFS-25854 B83-10248 01

Power-Factor Controller With Fast  
Load Response  
MFS-25852 B83-10249 01  
Programmable Power Conditioner  
MFS-25531 B83-10270 01

**POWER LINES**

Shielded Aluminum Flat-Conductor  
Cable  
MFS-25899 B83-10250 01  
Repairing Damaged Power-Cable  
Insulation  
KSC-11206 B83-10464 08

**POWER SUPPLIES**

Improved High-Current Drive Circuit  
NPO-14938 B83-10269 01

**POWER SUPPLY CIRCUITS**

Electronic-Power-Transformer Design  
Guide  
LEW-13208 B83-10131 01

**PREBURNERS**

Radial-Cascade Analysis  
MFS-19752 B83-10391 06  
Ribbed Coolant Liners for  
Combustion Chambers  
MFS-19829 B83-10696 08

**PREDICTION ANALYSIS TECHNIQUES**

Calculating Static-Seal Leakage  
Correlation  
MFS-19674 B83-10175 06  
Transonic, Axisymmetric Flow Over  
Nozzle Afterbodies With Supersonic Jet  
Exhausts  
LAR-12957 B83-10187 06  
Compressible Stability Analysis Code  
For Transition Prediction in Three  
Dimensional Boundary Layers.  
LAR-13042 B83-10188 06  
Least-Squares Prediction of Solar  
Activity  
MFS-25870 B83-10303 03  
Predicting Moisture Absorption in  
Composite Materials  
MSC-20109 B83-10337 04

**PRESENTATION**

Automatic Control of Multimedia  
Shows  
KSC-11080 B83-10286 02

**PRESSURE DISTRIBUTION**

Internally Mounting Strain Gages  
GSC-12824 B83-10618 06

**PRESSURE EFFECTS**

Pressure-Driven Waterflow Cleaning  
Device  
MFS-19638 B83-10679 07

**PRESSURE GAGES**

Electronically-Scanned Pressure  
Sensors  
ARC-11361 B83-10387 06

**PRESSURE MEASUREMENT**

Measuring Small Leak Holes  
MSC-20113 B83-10063 06  
Reusable High-Pressure Connector  
MSC-20339 B83-10097 07  
Membrane Switches Check Seal  
Pressure  
MSC-20468 B83-10373 06

**PRESSURE REDUCTION**

Pressure Reducer for Coal Gasifiers  
NPO-15100 B83-10084 07

**PRESSURE REGULATORS**

Remotely-Adjustable  
of Valve  
NPO-15693 B83-10404 06

**PRESSURE SENSORS**

Continuous-Reading Cryogen Level  
Sensor  
MFS-25873 B83-10611 06

**SUBJECT INDEX**

**PRESSURE SUITS**  
 Leak Test for Pressure-Sealing Zippers  
 KSC-11247 B83-10654 06

**PRESSURE VESSELS**  
 Dispensing Small Measured Volumes of Liquid  
 MFS-25690 B83-10056 06  
 Feedthrough Seal For High-Pressure Vessel  
 MSC-20625 B83-10502 01  
 Strain Analysis of Graphite/Epoxy Vessels  
 MFS-27018 B83-10714 08

**PREVENTION**  
 Fire-Resistant TFE Extrusions  
 MFS-25917 B83-10577 04

**PRINTED CIRCUITS**  
 Probe Array for Testing Printed-Circuit Substrates  
 GSC-12759 B83-10059 06

**PROBLEM SOLVING**  
 Solutions of Transonic Flow in Turbomachines  
 LEW-13896 B83-10186 06

**PROCESS CONTROL (INDUSTRY)**  
 Toroidal Ellipsoid Float-Zone Heater  
 MFS-25771 B83-10711 08

**PROCESSES**  
 Perfluoroalkylene-Ether Triazine Elastomers  
 ARC-11402 B83-10335 04

**PROCUREMENT MANAGEMENT**  
 Shuttle Inventory Management  
 KSC-11219 B83-10124 09

**PRODUCT DEVELOPMENT**  
 Rapid Circuit Breadboarding  
 MFS-25761 B83-10470 08

**PRODUCTION ENGINEERING**  
 One-Step Coal Liquefaction  
 NPO-15891 B83-10326 04  
 Cold-Crucible Premelter for Silicon  
 NPO-16050 B83-10457 08

**PRODUCTION MANAGEMENT**  
 Continuous Monitoring of Melt Composition  
 NPO-15896 B83-10574 04

**PRODUCTIVITY**  
 Wire Retrieves Broken Pin  
 MFS-19768 B83-10415 07

**PROGRAM VERIFICATION (COMPUTERS)**  
 Measuring Software-Execution Time  
 KSC-11267 B83-10278 02

**PROGRAMMING LANGUAGES**  
 SPIRE Data-Base Management System  
 GSC-12684 B83-10737 09

**PROPELLANT TRANSFER**  
 Adhesive Removal From Protective Clothing  
 KSC-11017 B83-10482 08

**PROPELLER DRIVE**  
 Noise Control in Propeller-Driven Aircraft  
 LAR-12954 B83-10049 06

**PROPHYLAXIS**  
 Acoustic Tooth Cleaner  
 LAR-12471 B83-10367 05

**PROPULSION SYSTEM PERFORMANCE**  
 Elliptical Orbit Performance Computer Program  
 LAR-13026 B83-10632 06

**PROSTHETIC DEVICES**  
 Lightweight, Economical Device Alleviates Drop Foot  
 LAR-12259 B83-10165 05  
 Adjustable Walker for the Handicapped  
 LAR-12990 B83-10369 05

**PROTECTIVE CLOTHING**  
 Adhesive Removal From Protective Clothing  
 KSC-11017 B83-10482 08

**PROTECTIVE COATINGS**  
 Improved Polyimide Intumescent Coating  
 ARC-11369 B83-10338 04

**PROTOTYPES**  
 Rapid Circuit Breadboarding  
 MFS-25761 B83-10470 08

**PROXIMITY**  
 Focal-Plane-Array Optical Proximity Sensors  
 NPO-15155 B83-10017 01

**PSEUDORANDOM SEQUENCES**  
 Pseudo-Random Number Generators  
 MFS-27017 B83-10736 09

**PULSE COMMUNICATION**  
 Digital-Image Enhancement  
 MFS-25679 B83-10530 02

**PULSE GENERATORS**  
 Obtaining Pulses From a CW Laser  
 NPO-15111 B83-10309 03

**PULSE POSITION MODULATION**  
 Efficient Coding for Optical Communication  
 NPO-15856 B83-10734 09

**PUMP SEALS**  
 Antivortex Inlet Ribs for Fluid-Seals  
 MFS-19793 B83-10426 07  
 Damping Seals for Turbomachinery  
 MFS-25834 B83-10437 07

**PUMPS**  
 Cryogenic Vacuum Pump  
 NPO-1517 B83-10198 07  
 Flow-Straightener Sleeve for Pump Valve  
 MFS-19781 B83-10385 06  
 Radial-Cascade Analysis  
 MFS-19752 B83-10391 06  
 Estimating Pump Blockage  
 MFS-19763 B83-10414 07  
 Transportable Pumps Could Save Oil Cargoes  
 MFS-25881 B83-10660 07

**PURIFICATION**  
 Fuel-Cell Reactant-Gas Purifier  
 MSC-20103 B83-10032 04  
 Removing Biostatic Agents From Fermentation Solutions  
 NPO-15806 B83-10370 05  
 Purifying Silicon During Crystal Growth  
 NPO-14831 B83-10730 08

**PYROHELIOMETERS**  
 Pyrheliometer With Improved Accuracy  
 NPO-15398 B83-10143 03

**PYROLYSIS**  
 Combined Silane Pyrolysis and Silicon-Particle Melt  
 NPO-15510 B83-10357 04  
 Making SixNyCz Fibers by Pyrolysis  
 MFS-25621 B83-10585 04  
 Silane Pyrolysis With Silicon-Seed Aerosol  
 NPO-16054 B83-10591 04

**PYROTECHNICS**  
 Low-Shock Pyrotechnic Actuator  
 LAR-13198 B83-10636 06

**Q**

**QUALITY CONTROL**  
 X-Ray Inspection of Transistors  
 NPO-15675 B83-10225 08  
 Test Pattern for IC's  
 NPO-15648 B83-10232 08  
 Quality-Planning-Requirements  
 MSC-20280 B83-10233 08  
 Digital Soldering-Iron Tester  
 MFS-25863 B83-10254 01  
 Hardware Fault Simulator Generates Test Vectors For Complex IC's  
 NPO-15362 B83-10538 02

**R**

**RADAR**  
 Radar for Mapping Sea Ice  
 NPO-15350 B83-10135 02

**RADAR DATA**  
 Processing of Synthetic-Aperture-Radar Data  
 NPO-15316 B83-10488 09

**RADAR MAPS**  
 Radar for Mapping Sea Ice  
 NPO-15350 B83-10135 02

**RADAR MEASUREMENT**  
 Improved Coal-Thickness Measurement  
 MFS-23721 B83-10284 02

**RADAR RESOLUTION**  
 Eliminating Doppler Effects in Synthetic-Aperture Radar Optical Processors  
 NPO-14998 B83-10291 02

**RADAR TRACKING**  
 Digital SAR Processor  
 NPO-15519 B83-10287 02

**RADIAL FLOW**  
 Calculating the Flow Field in a Radial Turbine Scroll  
 LEW-13437 B83-10104 07

**RADIANT HEATING**  
 Pyrheliometer With Improved Accuracy  
 NPO-15398 B83-10143 03

**RADIATION DETECTORS**  
 X-Ray Detector for 1 to 30 keV  
 GSC-12682 B83-10008 01  
 Viewer Makes Radioactivity 'Visible'  
 GSC-12640 B83-10027 03  
 Microwave Radiation Detector  
 NPO-15932 B83-10325 03

**RADIATION DISTRIBUTION**  
 Estimating Waveguide Feed Directivity and Spacing  
 NPO-15603 B83-10144 03

**RADIATION EFFECTS**  
 Radiation Improves Materials Bonding  
 NPO-14995 B83-10364 04  
 Measuring High Gas Temperatures  
 LEW-13819 B83-10627 06

**RADIATION LAWS**  
 Thermal Radiation Analyzer System  
 GSC-12783 B83-10626 06

# RADIATION TOLERANCE

# SUBJECT INDEX

- RADIATION TOLERANCE**  
Radiation-Hardness Data For Semiconductor Devices  
NPO-15787 B83-10507 01
- RADIATIVE HEAT TRANSFER**  
High-Absorptance Radiative Heat Sink  
GSC-12739 B83-10110 08
- RADIO ASTRONOMY**  
Microwave Radiation Detector  
NPO-15932 B83-10325 03  
Catalog of Spectral Lines  
NPO-15181 B83-10556 03
- RADIO FREQUENCIES**  
Radio-Frequency and Wideband Modulation Arraying  
NPO-15030 B83-10283 02
- RADIO FREQUENCY DISCHARGE**  
Improved Coil for Hydrogen Dissociators  
MFS-25638 B83-10262 01
- RADIO FREQUENCY HEATING**  
Absorbable-Susceptor Welding of Ceramics  
NPO-15640 B83-10217 08  
Forming Lightweight Beams From Composite Tape  
MFS-25880 B83-10694 08
- RADIO RECEIVERS**  
Sideband-Aided Receiver Arrays  
NPO-15873 B83-10522 02
- RADIO SIGNALS**  
Receiver for Antenna Arrays  
NPO-15089 B83-10015 02  
Binary Correlator for Electromagnetic Signal Patterns  
GSC-12714 B83-10275 02
- RADIO TELEMETRY**  
Linking 'Smart' Modules by a Single Channel  
NPO-15342 B83-10134 02
- RADIO TRANSMITTERS**  
Remotely-Operated Traffic Control Light  
ARC-11406 B83-10512 01
- RADIOACTIVE WASTES**  
Packaging Nuclear and Chemical Waste for Disposal  
NPO-15454 B83-10348 04
- RADIOGRAPHY**  
Neutron Probe of Building-Wall Composition  
GSC-12808 B83-10541 03
- RADIOMETERS**  
Lenseless Scanning Telescope  
LAR-12648 B83-10022 03  
Pyrheliometer With Improved Accuracy  
NPO-15398 B83-10143 03  
Solar-Collector Radiometer  
NPO-14986 B83-10313 03
- RAIL TRANSPORTATION**  
Locomotive Truck Dynamics  
MFS-25872 B83-10390 06
- RAIN**  
Rain and Dew Detector  
NPO-15370 B83-10405 06
- RANDOM NUMBERS**  
Generating Random Number Pairs  
MFS-27039 B83-10496 09
- RANDOM PROCESSES**  
Random Life Curves for Common Engineering Materials  
MSC-20433 B83-10163 04
- RANGE ERRORS**  
Processing of Synthetic-Aperture-Radar Data  
NPO-15316 B83-10488 09
- RANGE FINDERS**  
Self-Modulated Laser Rangefinder  
GSC-12761 B83-10142 03
- RAPID QUENCHING (METALLURGY)**  
Quenching Alloys in Containerless Processing  
MFS-25305 B83-10478 08
- RARE GAS-HALIDE LASERS**  
Controlling Metal-Halide Vapor Density in Lasers  
NPO-15021 B83-10310 03
- RC CIRCUITS**  
Thermal Radiation Analyzer System  
GSC-12783 B83-10626 06
- REACTION TIME**  
Preventing Motor Damage Due to Rapid Reversal  
MFS-19702 B83-10676 07
- RECEIVERS**  
Directional Coupler With Increased Directivity  
NPO-15892 B83-10252 01  
Frequency-Diversity Reception for Phase Modulation  
NPO-15040 B83-10290 02  
Determining the Nonlinearity of Microwave Receivers  
NPO-15355 B83-10536 02
- RECEPTION DIVERSITY**  
Receiver for Antenna Arrays  
NPO-15089 B83-10015 02  
Sideband-Aided Receiver Arrays  
NPO-15873 B83-10522 02
- RECORDING INSTRUMENTS**  
Portable X-Y Scanner  
MFS-25687 B83-10411 07  
Status Panel For Video Cassette Recorders  
KSC-11254 B83-10532 02
- RECOVERABILITY**  
Wire Retrieves Broken Pin  
MFS-19768 B83-10415 07
- RECRYSTALLIZATION**  
Annealing Solar Cells With Lasers  
NPO-15694 B83-10120 08
- RECTENNAS**  
Printed Circuit Converts RF Energy to dc Power  
LEW-13913 B83-10002 01
- RECYCLING**  
Recycling Lithium Carbonate/Lithium Hydroxide Waste  
KSC-11261 B83-10033 04  
Bricks and Cans for Thermal Storage  
MFS-25625 B83-10315 03
- REDUNDANT COMPONENTS**  
Coaxial Redundant Drives  
MFS-25171 B83-10197 07
- REFINING**  
One-Step Coal Liquefaction  
NPO-15891 B83-10326 04  
Molten Slag Would Boost Coal Conversion  
NPO-15711 B83-10327 04  
Dissolving Bubbles in Glass  
NPO-15105 B83-10347 04
- REFLECTORS**  
Normal-Incidence Soft-X-Ray Mirror  
NPO-15828 B83-10145 03  
Adjusting the Contour of Reflector Panels  
NPO-15319 B83-10721 08
- REFRACTORY MATERIALS**  
Fire-Resistant Composites  
ARC-11331 B83-10041 04
- REFRIGERATING**  
Passive Module for Cryogenic Refrigeration  
ARC-11263 B83-10401 06
- REFRIGERATORS**  
Ionic Refrigerator  
NPO-15288 B83-10320 03  
Motorized Cryogenic Valve  
ARC-11452 B83-10687 07
- REGENERATIVE COOLING**  
Variable-Conductance Heat-Transfer Module  
GSC-12771 B83-10408 07
- REGULATORS**  
Improved Two-Phase Switching Regulator  
NPO-15172 B83-10267 01
- REINFORCEMENT (STRUCTURES)**  
Reinforcement for Stretch Formed Sheet Metal  
MSC-20228 B83-10108 08  
Low-Weight Inserts for Aluminum Honeycomb Panels  
MSC-20227 B83-10116 08  
Roof Support Near Coal-Mining Face  
NPO-15165 B83-10431 07  
Repairing Defective Welds  
MFS-19618 B83-10484 08
- REINFORCING FIBERS**  
Stronger Carbon Fibers for Reinforced Plastics  
ARC-11261 B83-10035 04
- RELEASING**  
Reusable Release Mechanism  
MSC-20080 B83-10666 07  
Retention Mechanism for Spinning Objects  
MFS-25957 B83-10674 07
- RELIABILITY**  
Transonic Airfoil Analysis  
ARC-11436 B83-10395 06
- RELIABILITY ANALYSIS**  
Screening Plastic-Encapsulated Solid-State Devices  
MFS-25802 B83-10506 01
- RELIEF VALVES**  
Belleville Spring/Seal  
MFS-19596 B83-10653 06
- REMOTE CONTROL**  
Improving Control of Remote Manipulators  
NPO-15049 B83-10018 02  
Remotely-Adjustable of Valve  
NPO-15693 B83-10404 06  
Three-Fingered Robot Hand  
NPO-15959 B83-10409 07
- REMOTE HANDLING**  
Remote Manipulator Has Relistic 'Feel'  
NPO-15065 B83-10083 07
- REMOTE MANIPULATOR SYSTEM**  
Improving Control of Remote Manipulators  
NPO-15049 B83-10018 02
- REMOTE SENSING**  
Radar Cuts Subsoil Survey Costs  
KSC-11227 B83-10276 02  
Scanning XeCl Laser  
NPO-15692 B83-10307 03  
Detecting Methane Leaks  
NPO-15790 B83-10329 04

**SUBJECT INDEX**

**SEALING**

**REMOTE SENSORS**

Membrane Switches Check Seal  
Pressure  
MSC-20468 B83-10373 06

**REMOVAL**

Staked Bearing Removal Tool  
MSC-20337 B83-10093 07

**REPLACING**

Staked Bearing Removal Tool  
MSC-20337 B83-10093 07

**REPLENISHMENT**

Cold-Crucible Premelter for Silicon  
NPO-16050 B83-10457 08

Barrier Self for Hydraulic Actuators  
MSC-20390 B83-10655 06  
Temporary Sealing of Cavities for  
Leak Testing  
MFS-19646 B83-10680 07

## SEAMS (JOINTS)

Bellows With Longitudinal Beams  
MFS-19633 B83-10713 08

## SEARCH PROFILES

Binary Correlator for Electromagnetic  
Signal Patterns  
GSC-12714 B83-10275 02

## SELF ALIGNMENT

Self-Righting Objects  
NPO-15023 B83-10399 06

## SELF ERECTING DEVICES

Erectable Space-Construction  
Fixture  
MSC-20259 B83-10469 08

## SELF REPAIRING DEVICES

Control of Self-Replicating Systems  
MFS-25865 B83-10494 09

## SEMICONDUCTOR DEVICES

Ti/Pd/Cu Contacts for  
Semiconductor Devices  
NPO-15043 B83-10268 01  
Radiation-Hardness Data For  
Semiconductor Devices  
NPO-15787 B83-10507 01

## SEMICONDUCTOR JUNCTIONS

Electron Beam Could Probe  
Recombination Centers  
NPO-15285 B83-10141 03

## SEMICONDUCTOR LASERS

Measuring Excess Noise in SDL's  
LAR-12938 B83-10004 01

## SEMICONDUCTORS (MATERIALS)

Screening Plastic-Encapsulated  
Solid-State Devices  
MFS-25802 B83-10506 01  
Acoustic-Levitation Chamber  
NPO-16142 B83-10726 08

## SEPARATED FLOW

Fluid/Vapor Separator for Variable  
Flow Rates  
ARC-11401 B83-10299 03  
Nonseparating High-Area-Ratio  
Supersonic Nozzles  
MFS-19758 B83-10657 06

## SEPARATORS

In Situ Cross-Linking of Polyvinyl  
Alcohol Films  
LEW-13135 B83-10578 04

## SERVICE LIFE

Transformer and Meter Tester  
MFS-19708 B83-10681 07

## SERVOCONTROL

Servo Lead Compensation  
MFS-19614 B83-10513 01

## SERVOMECHANISMS

Three-Fingered Robot Hand  
NPO-15959 B83-10409 07  
Three-Level Control of Manipulators  
NPO-15048 B83-10493 09

## SETUPS

Air Guide for Sheet-Metal Grinder  
MFS-19788 B83-10423 07  
Drilling Holes on a Large Bolt Circle  
KSC-11115 B83-10434 07

## SEWING

Bonded Lockstitch for Insulating  
Blankets  
MSC-20283 B83-10688 08

## SHAFTS (MACHINE ELEMENTS)

Circuitry for Angle Measurements  
MFS-25825 B83-10137 02  
Coaxial Redundant Drives  
MFS-25171 B83-10197 07

## SHEAR FLOW

Measuring Surface-Shear Stress in a  
Wind Tunnel  
ARC-11384 B83-10180 06

## SHEAR PROPERTIES

Sample Holder for Cryogenic  
Adhesive Shear Test  
MFS-25729 B83-10060 06

## SHEAR STRENGTH

Characterizing Shear Properties of  
Membranes  
MFS-25745 B83-10057 06

## SHEAR STRESS

Measuring Surface-Shear Stress in a  
Wind Tunnel  
ARC-11384 B83-10180 06

Acoustic Design Improves Composite  
Impact Resistance  
LAR-12887 B83-10375 06

Shear-Panel Test Fixture Eliminates  
Corner Stresses  
LAR-12930 B83-10383 06

## SHEARING

Display for Mining-Machine  
Operators  
MFS-25955 B83-10535 02  
Vertical-Control Subsystem for  
Automatic Coal Mining  
MFS-25811 B83-10659 07

## SHEATHS

Light, Serviceable Insulation Blanket  
MSC-20452 B83-10220 08

## SHIELDING

Improved Connector Shell for Cable  
Shields  
NPO-15584 B83-10006 01  
Add-On Shielding for Unshielded  
Wire  
NPO-15107 B83-10007 01

Shielding Electric Connectors From  
Lightning  
NPO-15688 B83-10511 01

## SHOCK ABSORBERS

Segmented Tubular Seat Springs  
ARC-11349 B83-10422 07

## SHOCK SPECTRA

Estimating Design Loads in Coupled  
Vibrating Structures  
NPO-14872 B83-10182 06

## SHOCK WAVE PROPAGATION

Supersonic-Nozzle Shock-Wave  
Analysis  
MFS-19753 B83-10656 06

## SHOCK WAVES

Shock Free Airfoil Cascades  
LEW-13842 B83-10076 06

## SIALON

Sialon Electrodes and Insulators for  
MHD Device  
NPO-14945 B83-10352 04

## SIGNAL DISTORTION

Estimating Effects of Flicker Noise in  
Clock Signals  
NPO-15525 B83-10537 02

## SIGNAL ENCODING

Coding for Single-Line Transmission  
KSC-11220 B83-10013 02  
NRZ Data Asymmetry Corrector and  
Convolutional Encoder  
MSC-20187 B83-10133 02  
Efficient Coding for Optical  
Communication  
NPO-15856 B83-10734 09

## SIGNAL MEASUREMENT

Virtual-Center Antenna-Arraying  
System  
NPO-15874 B83-10273 02

## SIGNAL PROCESSING

Rounding Technique for High-Speed  
Digital Signal Processing  
NPO-15307 B83-10014 02

## SIGNAL TO NOISE RATIOS

Frequency-Diversity Reception for  
Phase Modulation  
NPO-15040 B83-10290 02  
High-Common-Mode-Rejection  
ential Amplifier  
MFS-25868 B83-10519 01

## SIGNAL TRANSMISSION

Efficient Distribution of  
Frequency-Standard Signals  
NPO-15392 B83-10012 02

## SILANES

Combined Silane Pyrolysis and  
Silicon-Particle Melt  
NPO-15510 B83-10357 04  
Measuring Trace Hydrocarbons in  
Silanes  
NPO-15273 B83-10359 04

## SILICON

Measuring Diffusion and  
Recombination in Polycrystalline  
Silicon  
NPO-15601 B83-10039 04  
Gas-Jet Meniscus Control in Ribbon  
Growth  
NPO-14978 B83-10112 08  
Generating SiF<sub>4</sub> From H<sub>2</sub>SiF<sub>6</sub>  
NPO-15721 B83-10155 04  
Fracture Strength of Silicon Solar  
Cells  
NPO-15187 B83-10181 06  
Low-Contamination Vibrating Feeder  
for Silicon Chips  
NPO-15128 B83-10445 07

## SUBJECT INDEX

**SUBJECT INDEX**

**SOLAR ENERGY**

Oscillating-Crucible Technique for Silicon Growth  
 NPO-15938 B83-10455 08  
 Improved Radiative Control of Ribbon Growth  
 NPO-15916 B83-10456 08  
 Starting Silicon-Ribbon Growth Automatically  
 NPO-15919 B83-10458 08  
 Growing Single Crystals From Low-Purity Silicon  
 NPO-15538 B83-10472 08  
 Melt-Level Sensing in Silicon-Web Growth  
 NPO-15356 B83-10473 08  
 Sampling of Silicon Powder for Impurity Analysis  
 NPO-15840 B83-10590 04  
 Silane Pyrolysis With Silicon-Seed Aerosol  
 NPO-16054 B83-10591 04  
 Purifying Silicon During Crystal Growth  
 NPO-14831 B83-10730 08  
**SILICON COMPOUNDS**  
 Generating SiF<sub>4</sub> From H<sub>2</sub>SiF<sub>6</sub>  
 NPO-15721 B83-10155 04  
**SILICON CONTROLLED RECTIFIERS**  
 Using a PFET To Commutate an SCR  
 NPO-15282 B83-10253 01  
**SILICON FILMS**  
 Improved Silicon-Growth Chamber  
 NPO-15237 B83-10471 08  
 Proposed Technique of Crystal-Ribbon Growth  
 NPO-15629 B83-10474 08  
 Silicon-Film Growth by Continuous Edge-Supported Melt Skimming  
 NPO-15532 B83-10731 08  
**SILICON RADIATION DETECTORS**  
 X-Ray Detector for 1 to 30 keV  
 GSC-12682 B83-10008 01  
**SILICON TRANSISTORS**  
 High Power Switching Transistor  
 LEW-13728 B83-10127 01  
**SILICONES**  
 Silicone Cerenkov-Radiator Material  
 GSC-12805 B83-10328 04  
 Combined Silane Pyrolysis and Silicon-Particle Melt  
 NPO-15510 B83-10357 04  
**SILICONIZING**  
 Studies of the Inverted Meniscus Deposition of Silicon on Ceramic  
 NPO-15602 B83-10234 08  
**SIMULATION**  
 Monte Carlo Investigation of Trajectories  
 GSC-12705 B83-10074 06  
 Crash Simulation and Nonlinear Structural Analysis

**SOLDERING**

Preparing Solar Cells for Soldering  
NPO-15626 B83-10218 08  
Digital Soldering-Iron Tester  
MFS-25863 B83-10254 01

**SOLID ELECTROLYTES**

Ion Engine With Solid-Electrolyte Ion Generator  
NPO-15809 B83-10548 03

**SOLID STATE DEVICES**

The Effect of Cosmic Rays on MSI Devices  
NPO-15779 B83-10263 01  
Screening Plastic-Encapsulated Solid-State Devices  
MFS-25802 B83-10506 01

**SOLIDIFICATION**

Directional Solidification of Monotectic Alloys  
MFS-25767 B83-10157 04  
Directional Solidification of Monotectic Alloys  
MFS-25767 B83-10159 04

**SOLUBILITY**

Estimating the Solubility of Gases in Battery Electrolytes  
NPO-15610 B83-10321 03

**SOLUTIONS**

Pressure-Reduction Technique for Crystal Growth  
NPO-15772 B83-10226 08

**SOLVENT EXTRACTION**

Supercritical-Multiple-Solvent on From Coal  
NPO-15767 B83-10153 04  
Recovering Zinc From Discarded Tires  
NPO-16046 B83-10568 04  
Solvent Extraction of Furfural From Biomass  
NPO-15987 B83-10599 05

**SOLVENTS**

Solvent-Resistant Polysulfones  
LAR-12931 B83-10151 04  
Cracks in Glass Polymers Induced by Solvent Absorption  
NPO-15072 B83-10161 04

**SONAR**

Unmanned Instrument Platform for Undersea Exploration  
NPO-15878 B83-10526 02

**SOOT**

Reducing Soot in Diesel Exhaust  
NPO-15715 B83-10355 04

**SOURCE PROGRAMS**

FORTRAN Static Source Code Analyzer  
GSC-12724 B83-10738 09

**SPACE SHUTTLE PAYLOADS**

Methods for Estimating Payload/Vehicle Design Loads  
NPO-15550 B83-10184 06

**SPACE SHUTTLES**

Quality-Planning-Requirements ments  
MSC-20280 B83-10233 08

**SPACEBORNE TELESCOPES**

Lenseless Scanning Telescope  
LAR-12648 B83-10022 03

**SPACECRAFT**

**ELECTRONIC EQUIPMENT**  
Electronic-Power-Transformer Design Guide  
LEW-13208 B83-10131 01

**SPARK MACHINING**

Wire Electrical-Discharge Machining Aid  
MFS-19643 B83-10686 07  
Electroformed Electrodes for Electrical-Discharge Machining  
MFS-19651 B83-10715 08

**SPECTROMETERS**

Electronically-Scanned form Spectrometer  
NPO-15844 B83-10292 02

**SPECTROSCOPY**

Collecting Light From Point Images  
NPO-15887 B83-10542 03  
Continuous Monitoring of Melt Composition  
NPO-15896 B83-10574 04

**SPEED CONTROL**

Controlling An Inverter-Driven Three-Phase Motor  
MFS-25215 B83-10510 01

**SPEED INDICATORS**

Brushless Low-Speed dc Tachometer  
NPO-15706 B83-10650 06  
Optical Turbopump Speed Sensor  
MFS-19794 B83-10651 06

**SPHERICAL SHELLS**

Fabrication of Hollow Spheres  
NPO-15798 B83-10467 08

Hollow Spheres of Metallic Glass  
NPO-15991 B83-10583 04

**SPIKING**

Ribbon Reduces Spiking in Electron-Beam Welding  
MFS-19701 B83-10698 08

**SPRAYED COATINGS**

Oxidation-Resistant Slurry Coating for Carbon-Based Materials  
LEW-13951 B83-10572 04  
Conductive Plasma-Sprayed Coatings  
NPO-15927 B83-10595 04

**SPRINGS (ELASTIC)**

Segmented Tubular Seat Springs  
ARC-11349 B83-10422 07  
Bearing Wear in Large Thermal Gradients  
MFS-25879 B83-10428 07

**STABILITY TESTS**

Stability Test for Transient-Temperature Calculations  
MFS-25803 B83-10381 06

**STABILIZERS (AGENTS)**

Solvent-Resistant Polysulfones  
LAR-12931 B83-10151 04

**STABLE OSCILLATIONS**

Stabilizing Crystal Oscillators With Melting Metals  
NPO-15641 B83-10257 01

**STANDARD DEVIATION**

Determining Normal-Distribution Tolerance Bounds Graphically  
MSC-20115 B83-10238 09

**STANDARDIZATION**

Developing Standards for Photovoltaic Devices  
NPO-15734 B83-10130 01

**STANDARDS**

Digital Phase-Shift Standard  
KSC-11250 B83-10001 01  
Standards for Epoxies Used in Microelectronics  
MFS-25810 B83-10042 04  
Hydrogen Masers as Time and Frequency Standards  
NPO-15858 B83-10298 03  
Catalog of Spectral Lines  
NPO-15181 B83-10556 03

**STAR TRACKERS**

Sun Tracker Operates a Year Between Calibrations  
NPO-15810 B83-10546 03

**STATISTICAL ANALYSIS**

Determining Normal-Distribution Tolerance Bounds Graphically  
MSC-20115 B83-10238 09  
FORTRAN Static Source Code Analyzer  
GSC-12724 B83-10738 09

**STEERABLE ANTENNAS**

Phased-Antenna-Array Conical Scanning  
NPO-15899 B83-10274 02

**STIFFNESS**

Characterizing Shear Properties of Membranes  
MFS-25745 B83-10057 06  
Analyzing Vibrations in a Long Mast  
MFS-25746 B83-10641 06

**STIRLING CYCLE**

Low-Vibration Oscillating Compressor  
GSC-12799 B83-10658 07

**SUBJECT INDEX**

**STRAIN GAGES**  
 Attaching Strain Gages to Composite Materials  
 MFS-25867 B83-10378 06  
 Internally Mounting Strain Gages  
 GSC-12824 B83-10618 06  
 Heater Ensures Strain-Gage Bond Reliability  
 MFS-19859 B83-10619 06

**STRESS ANALYSIS**  
 Random Life Curves for Common Engineering Materials  
 MSC-20433 B83-10163 04  
 Strain Analysis of Graphite/Epoxy Vessels  
 MFS-27018 B83-10714 08

**STRESS CORROSION**  
 Stress-Corrosion Cracking in Martensitic PH Stainless Steels  
 MFS-25400 B83-10342 04

**STRESS CORROSION CRACKING**  
 Stress Corrosion Cracking of Certain Aluminum Alloys  
 MFS-25773 B83-10160 04

**STRETCH FORMING**  
 Reinforcement for Stretch Formed Sheet Metal  
 MSC-20228 B83-10108 08

**STRIP TRANSMISSION LINES**  
 Stripline Antenna Beam-Forming Network  
 NPO-15743 B83-10503 01

**STRUCTURAL ANALYSIS**  
 Simplified Modeling of Tetrahedral Trusses  
 LAR-12815 B83-10068 06  
 Estimating Design Loads in Coupled Vibrating Structures  
 NPO-14872 B83-10182 06  
 Crash Simulation and Nonlinear Structural Analysis  
 LAR-12926 B83-10392 06  
 Mathematical Instability Criteria for Elastic Structures  
 NPO-15090 B83-10620 06  
 System for Structural Synthesis Combines Finite-Element Analysis and Optimization Programs  
 LAR-13046 B83-10623 06  
 Free-Vibration Analysis of Structures  
 NPO-15797 B83-10625 06

**STRUCTURAL DESIGN**  
 Minimizing Weight of Structural Designs  
 LAR-13107 B83-10624 06

**STRUCTURAL ENGINEERING**  
 General-Purpose Icosahedral Structure  
 GSC-12854 B83-10612 06

**STRUCTURAL MEMBERS**  
 Self-Alining Quick-Connect Joint  
 LAR-12711 B83-10094 07  
 Joining Tubes With Adhesive  
 MFS-25958 B83-10700 08

**STRUCTURAL STRAIN**  
 Retrofitting Vibration Dampers  
 MFS-19790 B83-10685 07

**STRUCTURAL VIBRATION**  
 Time-Domain Modal Vibration Identification  
 LAR-12924 B83-10072 06  
 Estimating Design Loads in Coupled Vibrating Structures  
 NPO-14872 B83-10182 06  
 Accuracy Criterion for Structural Calculations  
 NPO-16008 B83-10634 06

**SUBLIMATION**  
 Identifying Boundary-Layer Transitions on Aircraft Skin  
 LAR-13089 B83-10609 06

**SUBMILLIMETER WAVES**  
 Low-Noise Submillimeter-Wave Diode  
 NPO-15935 B83-10498 01

**SUBSTRATES**  
 Forming Mirrors on Composite Materials  
 NPO-15912 B83-10215 08  
 Studies of the Inverted Meniscus Deposition of Silicon on Ceramic  
 NPO-15602 B83-10234 08  
 Evaluation of Structural Cellular Glass  
 NPO-15680 B83-10339 04

**SUBSTRUCTURES**  
 Estimating Design Loads in Coupled Vibrating Structures  
 NPO-14872 B83-10182 06

**SULFUR**  
 Three-Zone Catalyst Resists Sulfur Poisoning  
 NPO-14827 B83-10356 04

**SULFUR DIOXIDES**  
 Removing Sulfur Dioxide From Flue Gases  
 NPO-15758 B83-10593 04

**SUPERCONDUCTIVITY**  
 X-Ray-Diffraction Analysis of Nb/Ge Alloys  
 MFS-27038 B83-10594 04

**SUPERSONIC FLOW**  
 Supersonic-Nozzle Shock-Wave Analysis  
 MFS-19753 B83-10656 06

**SUPERSONIC JET FLOW**  
 Suppressing Transient Side Loads in Supersonic Nozzles  
 MFS-19769 B83-10379 06

**SUPERSONIC NOZZLES**  
 Nonseparating High-Area-Ratio Supersonic Nozzles  
 MFS-19758 B83-10657 06

**SUPPORTS**  
 Two-Degree-of-Freedom Mount System for Flutter Models  
 LAR-12950 B83-10062 06  
 Isolating Supports for X-Ray Mirrors  
 MFS-25904 B83-10386 06  
 Shock Mounting for Heavy Machines  
 MFS-25888 B83-10420 07  
 Roof Support Near Coal-Mining Face  
 NPO-15165 B83-10431 07  
 Edge Supports for Photovoltaic Modules  
 NPO-15740 B83-10452 08  
 Partial-Payload Support Structure  
 MFS-25485 B83-10647 06

**SURFACE DEFECTS**  
 Deallocating Defective Space on Winchester Disks  
 KSC-11287 B83-10534 02

**SURFACE FINISHING**  
 Repairing Thermal Tiles  
 MSC-20336 B83-10712 08

**SURFACE ROUGHNESS**  
 Dissociated Airflow Effects During Plasma-Arc Testing  
 MSC-20522 B83-10185 06

**SURFACE TEMPERATURE**  
 Dissociated Airflow Effects During Plasma-Arc Testing  
 MSC-20522 B83-10185 06

**TECHNOLOGY ASSESSMENT**

**SURVEILLANCE**  
 Telemetry Speeds Forest-Fire Control  
 ARC-11438 B83-10279 02

**SURVEYS**  
 Radar Cuts Subsoil Survey Costs  
 KSC-11227 B83-10276 02

**SURVIVAL EQUIPMENT**  
 Inflatable Rescue Capsules  
 MFS-25677 B83-10372 05

**SUSPENSION SYSTEMS (VEHICLES)**  
 Locomotive Truck Dynamics  
 MFS-25872 B83-10390 06

**SWEPT WINGS**  
 Vortex Lift Augmentation by Suction  
 LAR-12969 B83-10071 06

**SWIRLING**  
 Swirl Diffuser  
 MSC-18996 B83-10173 06

**SWITCHES**  
 Solid-State Crossbar Switch  
 NPO-15066 B83-10259 01  
 Membrane Switches Check Seal Pressure  
 MSC-20468 B83-10373 06  
 Preventing Motor Damage Due to Rapid Reversal  
 MFS-19702 B83-10676 07

**SWITCHING**  
 High Power Switching Transistor  
 LEW-13728 B83-10127 01

**SWITCHING CIRCUITS**  
 High Power Switching Transistor  
 LEW-13728 B83-10127 01  
 Improved Two-Phase Switching Regulator  
 NPO-15172 B83-10267 01

**SYNTHETIC APERTURE RADAR**  
 Radar for Mapping Sea Ice  
 NPO-15350 B83-10135 02  
 Digital SAR Processor  
 NPO-15519 B83-10287 02  
 Eliminating Doppler Effects in Synthetic-Aperture Radar Optical Processors  
 NPO-14998 B83-10291 02  
 Processing of Synthetic-Aperture-Radar Data  
 NPO-15316 B83-10488 09

**SYSTEMS MANAGEMENT**  
 Control of Self-Replicating Systems  
 MFS-25865 B83-10494 09

**T**

**TACHOMETERS**  
 Brushless Low-Speed dc Tachometer  
 NPO-15706 B83-10650 06

**TACTILE DISCRIMINATION**  
 Integrated Tactile Sensor for Robots  
 NPO-15094 B83-10610 06

**TAPERED COLUMNS**  
 Fabrication of Graphite/Epoxy Column Elements  
 LAR-12915 B83-10115 08

**TAR SANDS**  
 Extracting Oil From Tar Sands  
 NPO-15760 B83-10349 04

**TECHNOLOGY ASSESSMENT**  
 Instrumentation and Control for Fossil-Energy Processes  
 NPO-15581 B83-10531 02

**TECHNOLOGY UTILIZATION**

**SUBJECT INDEX**

**TECHNOLOGY UTILIZATION**

Ion Engine With Solid-Electrolyte Ion Generator  
 NPO-15809 B83-10548 03

**TELESCOPES**  
 Lenseless Scanning Telescope  
 LAR-12648 B83-10022 03  
 Multispectral Dual-Aperture Schmidt Objective  
 GSC-12756 B83-10146 03  
 Eliminating 'Hotspots' in Digital Image Processing  
 NPO-15684 B83-10527 02

**TELEVISION CAMERAS**  
 Controlling TV-Camera f-Stop Remotely  
 KSC-11269 B83-10550 03

**TEMPERATURE CONTROL**  
 Cooling by Para-to-Ortho-Hydrogen Conversion  
 GSC-12770 B83-10024 03  
 Shell-Tile Thermal-Protection System  
 LAR-12862 B83-10051 06  
 Controlling Heat-Exchanger Outlet Temperature  
 MFS-19667 B83-10170 06  
 Stabilizing Crystal Oscillators With Melting Metals  
 NPO-15641 B83-10257 01  
 Cooling Waveguide Flanges in Microwave Transmitters  
 NPO-15401 B83-10264 01  
 Heat-Pipe Thermal Switch  
 GSC-12644 B83-10384 06  
 Variable-Conductance Heat-Transfer Module  
 GSC-12771 B83-10408 07  
 Metering Baffle for Turbine-Blade Cooling  
 MFS-25849 B83-10424 07  
 Miniature Temperature-Control Circuit  
 LAR-12900 B83-10515 01  
 Airflow Assists Solar Receiver  
 NPO-15784 B83-10545 03  
 Liquid-Droplet Radiative Cooler  
 MFS-25890 B83-10602 06

**TEMPERATURE DEPENDENCE**  
 Automated Magnetic Susceptibility Analysis  
 MFS-25935 B83-10592 04

**TEMPERATURE DISTRIBUTION**  
 Radially-Graduated Temperature Profile  
 MFS-19831 B83-10607 06

**TEMPERATURE EFFECTS**  
 Freeze/Thaw Properties of Cellular Glass  
 NPO-15854 B83-10162 04  
 Effect of Temperature on Fiber-Optic Delay  
 NPO-15148 B83-10318 03  
 Bearing Wear in Large Thermal Gradients  
 MFS-25879 B83-10428 07

**TEMPERATURE MEASUREMENT**  
 Determining Solar-Cell Operating Temperature  
 NPO-15449 B83-10010 01

**TEMPERATURE MEASURING INSTRUMENTS**  
 Gas-Temperature Measurement With Minimal Perturbation  
 MSC-20338 B83-10061 06

**TEMPERATURE PROBES**

Temperature-Averaging Thermal Probe  
 GSC-12795 B83-10614 06

**TENSILE STRENGTH**  
 Stronger Carbon Fibers for Reinforced Plastics  
 ARC-11261 B83-10035 04

**TENSILE STRESS**  
 Measuring Elastic Modulus of Sintered Metal  
 NPO-15589 B83-10055 06

**TERRAIN ANALYSIS**  
 Radar Cuts Subsoil Survey Costs  
 KSC-11227 B83-10276 02  
 Algorithm for Constructing Contour Plots  
 ARC-11441 B83-10490 09

**TEST CHAMBERS**  
 Flame-Test Chamber  
 NPO-15407 B83-10719 08

**TEST EQUIPMENT**  
 Leak Tester for Cryogenic Flowlines  
 MSC-20233 B83-10174 06  
 Shear-Panel Test Fixture Eliminates Corner Stresses  
 LAR-12930 B83-10383 06

**TEST FACILITIES**  
 Test-Bench Dynamometer  
 NPO-15084 B83-10441 07

**TEST PATTERN GENERATORS**  
 Test Pattern for IC's  
 NPO-15648 B83-10232 08

**TEST STANDS**  
 Vibration-Isolation Bench for Testing in Vacuum  
 GSC-12753 B83-10171 06  
 Test Frame Simulates Zero Gravity  
 MFS-25518 B83-10637 06  
 Partial-Payload Support Structure  
 MFS-25485 B83-10647 06

**TESTING TIME**  
 Accelerated Solar-UV Test Chamber  
 NPO-15063 B83-10323 03

**TESTS**  
 Task Board Tests Manipulator Performance  
 NPO-15150 B83-10070 06

**TETHERLINES**  
 Latching Mechanism for Umbilical Connectors  
 MSC-20242 B83-10096 07

**TETRAHEDRONS**  
 Simplified Modeling of Tetrahedral Trusses  
 LAR-12815 B83-10068 06

**THERMAL ANALYSIS**  
 Stability Test for Transient-Temperature Calculations  
 MFS-25803 B83-10381 06

**THERMAL CONDUCTIVITY**  
 Improving A Guarded Hotplate  
 MSC-20447 B83-10069 06

**THERMAL CONTROL COATINGS**  
 Two-Layer Glass Thermal-Control Coating  
 ARC-11164 B83-10573 04

**THERMAL DISSOCIATION**  
 Decoupling a Reflecting Layer From Its Support Structure  
 NPO-15345 B83-10486 08

**THERMAL ENERGY**  
 Long Heat Pipe Transports 2.6 kW  
 NPO-16017 B83-10608 06

**THERMAL INSULATION**

Shell-Tile Thermal-Protection System  
 LAR-12862 B83-10051 06  
 Light, Serviceable Insulation Blanket  
 MSC-20452 B83-10220 08  
 Improved Polyimide Intumescent Coating  
 ARC-11369 B83-10338 04  
 Additional Heat Treatment for Silica-Fiber Insulation  
 MSC-20600 B83-10588 04  
 Repairing Thermal Tiles  
 MSC-20336 B83-10712 08

**THERMAL MAPPING**  
 Frost Forecasting for Fruitgrowers  
 KSC-11241 B83-10243 09  
 Temperature-Averaging Thermal Probe  
 GSC-12795 B83-10614 06

**THERMAL RADIATION**  
 Thermal Radiation Model Renodalization  
 MSC-20348 B83-10073 06  
 Thermal Radiation Analyzer System  
 GSC-12783 B83-10626 06

**THERMAL SIMULATION**  
 Thermal Modeling of Bridgman Crystal Growth  
 MFS-27003 B83-10237 08

**THERMAL STRESSES**  
 Fatigue Testing of Heat-Exchanger Tubes  
 MFS-19599 B83-10648 06

**THERMALIZATION (ENERGY ABSORPTION)**  
 High-Temperature Helical-Tube Solar Receiver  
 NPO-15768 B83-10565 03

**THERMOCOUPLES**  
 Measuring High Gas Temperatures  
 LEW-13819 B83-10627 06  
 Oxidation Protection for Thermocouples  
 NPO-15605 B83-10710 08

**THERMODYNAMICS**  
 Spherical-Bearing Analysis Program  
 LEW-13626 B83-10671 07

**THERMOPLASTIC RESINS**  
 Making Thermoplastics Flame-Resistant  
 NPO-14857 B83-10363 04

**THERMOREGULATION**  
 Controlling Heat-Exchanger Outlet Temperature  
 MFS-19667 B83-10170 06

**THERMOSETTING RESINS**  
 Process for Molding Nonreinforced (Neat) Resins  
 LAR-12981 B83-10038 04  
 Improved Thermosetting Imide Resins  
 ARC-11368 B83-10341 04

**THIN FILMS**  
 Computation of Bragg Reflection for Layered Microstructures  
 NPO-15880 B83-10300 03

**THIN WALLED SHELLS**  
 Fabrication of Hollow Spheres  
 NPO-15798 B83-10467 08

**THREADS**  
 Air-Lubricated Lead Screw  
 NPO-15617 B83-10101 07

**THREE DIMENSIONAL FLOW**  
 Improved Laser Velocimeter  
 MFS-25465 B83-10312 03

**SUBJECT INDEX**

**TRANSONIC FLOW**

Analyzing Flow Fields in Axial-Compressor Rotors and Stators LEW-13910 B83-10629 06  
 Simulating a Three-Dimensional Flow in Pipes ARC-11466 B83-10638 06  
**THRUST CHAMBERS**  
 Rhenium Prevents Corrosion NPO-15011 B83-10361 04  
**THRUST CONTROL**  
 Mathematical Simulation of Flight Maneuvers NPO-15395 B83-10644 06  
**THYRISTORS**  
 Simplified High-Power Inverter NPO-15961 B83-10499 01  
**TILES**  
 Shell-Tile Thermal-Protection System LAR-12862 B83-10051 06  
 Rewaterproofing Silica Tiles MSC-20340 B83-10111 08  
 Repairing Thermal Tiles MSC-20336 B83-10712 08  
**TIME LAG**  
 Measuring Delay in Lasers NPO-15242 B83-10558 03  
**TIMING DEVICES**  
 Measuring Delay in Lasers NPO-15242 B83-10558 03  
**TIRES**  
 Recovering Zinc From Discarded Tires NPO-16046 B83-10568 04  
**TOKAMAK DEVICES**  
 Ion Accelerator Merges Several Beams NPO-15547 B83-10540 03  
**TOOLING**  
 Tooling Converts Stock Bearings To Custom Bearings LAR-12922 B83-10090 07  
 Tool Enlarges Hard-to-Reach Holes MFS-19789 B83-10413 07  
**TOOLS**  
 Electrochemical Deburring MFS-19693 B83-10087 07

 Staked Bearing Removal Tool MSC-20337 B83-10093 07  
 Retaining-Ring Installation Tool MFS-19725 B83-10098 07  
 Machining Three Prongs on a Shaft MFS-19729 B83-10099 07  
 Locking Bolt MSC-20439 B83-10202 07  
 Expander for Thin-Wall Tubing MFS-19739 B83-10203 07  
 Tool for Guiding An Auger MSC-20194 B83-10205 07  
 Bender/Coiler for Tubing MSC-20410 B83-10206 07  
 Portable Roller Staking Tool MSC-20281 B83-10208 07  
 Tool for Replacing Bushings MSC-20282 B83-10209 07  
 Testing Bearings in Tight Spaces MSC-20250 B83-10210 07  
 Holding Tubes in Place for Brazing MFS-19658 B83-10211 07  
 Better Seals for Vacuum Bags MFS-25875 B83-10216 08  
 Tool Releases Optical Elements From Spring Brackets GSC-12794 B83-10380 06

Hole-Center Locating Tool KSC-11248 B83-10412 07  
 Tool Enlarges Hard-to-Reach Holes MFS-19789 B83-10413 07  
 Wire Retrieves Broken Pin MFS-19768 B83-10415 07  
 Air Guide for Sheet-Metal Grinder MFS-19788 B83-10423 07  
 Tool for Taking Clay Impressions MFS-19728 B83-10435 07  
 Tool for Tightening Bolts With Knurled Heads MFS-25694 B83-10436 07  
 Measuring Recessed Pins MFS-19673 B83-10439 07  
 Bearing Measuring Fixture MFS-19315 B83-10442 07  
 Stripper for Cables of Any Cross Section NPO-15631 B83-10443 07  
 Torque-Wrench Extension Arm NPO-15495 B83-10447 07  
 Inspecting Joints With Grooved Surfaces MFS-25934 B83-10640 06  
 Installation/Removal Tool for Screw-Mounted Components MSC-20606 B83-10667 07  
 Depth Gage for Threaded Holes MFS-19884 B83-10672 07  
 A One-Hand Nut and Bolt Assembly Tool MFS-19691 B83-10677 07  
 Portable Power Broach MFS-19679 B83-10678 07  
 Hydraulic Tube Expander MFS-19731 B83-10682 07  
 Attaching Chuck Keys to Machine Tools KSC-11249 B83-10684 07  
**TORCHES**  
 Automatic Guidance System for Welding Torches MFS-25807 B83-10690 08  
**TORQUE**  
 Tool for Tightening Bolts With Knurled Heads MFS-25694 B83-10436 07  
**TORQUEMETERS**  
 Torque-Wrench Extension Arm NPO-15495 B83-10447 07  
**TOWERS**  
 Simplified Modeling of Tetrahedral Trusses LAR-12815 B83-10068 06  
**TRACE CONTAMINANTS**  
 Measuring Trace Hydrocarbons in Silanes NPO-15273 B83-10359 04  
**TRACKED VEHICLES**  
 Automated Coal-Mine Shuttle Car NPO-15850 B83-10417 07  
 Shuttle-Car System for Continuous Mining NPO-15949 B83-10418 07  
**TRACKING (POSITION)**  
 Tracking Visible Targets Automatically NPO-15226 B83-10642 06  
 Vertical-Control Subsystem for Automatic Coal Mining MFS-25811 B83-10659 07  
**TRACKING NETWORKS**  
 Phased-Antenna-Array Conical Scanning NPO-15899 B83-10274 02

**TRAFFIC CONTROL**  
 Remotely-Operated Traffic Control Light ARC-11406 B83-10512 01  
**TRAILERS**  
 Improved Cattle Hauler FRC-11058 B83-10020 03  
**TRAINING SIMULATORS**  
 Training Simulator for Fire Management MFS-25898 B83-10495 09  
**TRAJECTORY OPTIMIZATION**  
 Planning Transport and Manufacturing for Lowest Cost NPO-15391 B83-10123 09  
**TRANSDUCERS**  
 Level Sensor for Cryogenic Fluids MSC-20302 B83-10009 01  
 Flexible Coupling for Angle Transducer NPO-15412 B83-10064 06  
 Transducer Joint for Kidney-Stone Ultrasonics GSC-12652 B83-10166 05  
**TRANSFORMERS**  
 Electronic-Power-Transformer Design Guide LEW-13208 B83-10131 01  
**TRANSISTORS**  
 High Power Switching Transistor LEW-13728 B83-10127 01  
 Measuring Tension in Transistor Suspensions NPO-15677 B83-10128 01  
 X-Ray Inspection of Transistors NPO-15675 B83-10225 08  
**TRANSITION TEMPERATURE**  
 Electrical Dissipation Measurement of Polymer Phase Transitions LAR-12861 B83-10053 06  
**TRANSLATING**  
 Software Specification Language MFS-23737 B83-10244 09  
**TRANSMISSION LINES**  
 Stabilizing Fiber-Optic Transmission Lines NPO-15036 B83-10319 03  
**TRANSMISSIONS (MACHINE ELEMENTS)**  
 Coaxial Redundant Drives MFS-25171 B83-10197 07  
 Equations for Automotive-Transmission Performance NPO-15825 B83-10410 07  
**TRANSMITTERS**  
 Central Control of Local Oscillator Frequencies GSC-12804 B83-10533 02  
**TRANSONIC FLOW**  
 Proposed Short-Throat Supersonic Nozzles MFS-19759 B83-10067 06  
 Shock Free Airfoil Cascades LEW-13842 B83-10076 06  
 Flow Through a Rotating Turbomachinery Blade Row LEW-13832 B83-10102 07  
 Solutions of Transonic Flow in Turbomachines LEW-13896 B83-10186 06  
 Transonic, Axisymmetric Flow Over Nozzle Afterbodies With Supersonic Jet Exhausts LAR-12957 B83-10187 06

Steady, Nonrotating, Blade-to-Blade Potential Transonic Cascade Flow Analysis Code LEW-13854 B83-10189 06

**TRANSPORT AIRCRAFT**  
Takeoff and Landing of Transport Aircraft LAR-13086 B83-10633 06

**TRANSPORTER**  
Transporter for Treated Sheet Materials MSC-20332 B83-10204 07

**TRUNCATION ERRORS**  
Rounding Technique for High-Speed Digital Signal Processing NPO-15307 B83-10014 02

**TRUSSES**  
Simplified Modeling of Tetrahedral Trusses LAR-12815 B83-10068 06  
Forming Lightweight Beams From Composite Tape MFS-25880 B83-10694 08

**TUBE HEAT EXCHANGERS**  
High-Temperature Helical-Tube Solar Receiver NPO-15768 B83-10565 03  
Fatigue Testing of Heat-Exchanger Tubes MFS-19599 B83-10648 06

**TUBES**  
Lock for Tube Fittings MFS-25964 B83-10440 07  
Repairing Hidden Cracks in Coolant Tubes MFS-19796 B83-10689 08

**TUNABLE LASERS**  
Simplified Laser Tuning NPO-15690 B83-10308 03

**TURBINE BLADES**  
Radial-Cascade Analysis MFS-19752 B83-10391 06  
Metering Baffle for Turbine-Blade Cooling MFS-25849 B83-10424 07  
Convection-Cooled Turbine Airfoils MFS-25848 B83-10425 07  
Staging Two-Phase Turbines NPO-15037 B83-10444 07

**TURBINE ENGINES**  
Staging Two-Phase Turbines NPO-15037 B83-10444 07

**TURBINE PUMPS**  
Antivortex Inlet Ribs for Fluid-Seals MFS-19793 B83-10426 07  
Optical Turbopump Speed Sensor MFS-19794 B83-10651 06

**TURBINES**  
Wind Turbine With Concentric Ducts KSC-11191 B83-10086 07  
Flow Through a Rotating Turbomachinery Blade Row LEW-13832 B83-10102 07  
Compressible Flow About Wind Turbine Blades LEW-13740 B83-10103 07  
Calculating the Flow Field in a Radial Turbine Scroll LEW-13437 B83-10104 07  
Off-Design Turbine Modeling LEW-13674 B83-10195 06

**TURBOCOMPRESSORS**  
Design of Multistage Axial-Flow Compressors LEW-13505 B83-10191 06

Axial Compressor Design and Analysis LEW-13488 B83-10196 06

**TURBOFAN ENGINES**  
Reduced Aircraft-Engine Noise LAR-12890 B83-10048 06

**TURBOMACHINE BLADES**  
Flow Through a Rotating Turbomachinery Blade Row LEW-13832 B83-10102 07  
PANEL Code for Planar Cascades LEW-13862 B83-10190 06  
Design of Multistage Axial-Flow Compressors LEW-13505 B83-10191 06

**TURBOMACHINERY**  
Solutions of Transonic Flow in Turbomachines LEW-13896 B83-10186 06

**TURBOSHAFTS**  
Damping Seals for Turbomachinery MFS-25834 B83-10437 07

**TURBULENCE**  
Searching for Clear-Air Turbulence NPO-15351 B83-10016 02  
Multivalued-Velocity-Field Model of Turbulence NPO-15748 B83-10183 06  
Advances in Multivalued-Velocity Theory of Turbulence NPO-16006 B83-10622 06

**TURBULENT BOUNDARY LAYER**  
Identifying Boundary-Layer Transitions on Aircraft Skin LAR-13089 B83-10609 06

**TURBULENT FLOW**  
Boundary-Layer Equations for Two-Dimensional and Axisymmetric Flow LAR-13015 B83-10080 06  
Multivalued-Velocity-Field Model of Turbulence NPO-15748 B83-10183 06

**TWISTED WINGS**  
Wing Subsonic Aerodynamic Performance Estimates LAR-12987 B83-10079 06

**TWO DIMENSIONAL FLOW**  
Boundary-Layer Equations for Two-Dimensional and Axisymmetric Flow LAR-13015 B83-10080 06  
Stalled-Flow and Head-Loss Model for Diffuser Pumps MFS-19748 B83-10673 07

**U**

**ULTRAPURE METALS**  
Quenching Alloys in Containerless Processing MFS-25305 B83-10478 08

**ULTRASONIC CLEANING**  
Acoustic Tooth Cleaner LAR-12471 B83-10367 05

**ULTRASONIC RADIATION**  
Measuring Ultrasonic Shear-Wave Velocity MFS-19680 B83-10058 06

**ULTRASONIC TESTS**  
Determining the Orientation of Anisotropic Materials MSC-20229 B83-10054 06

**ULTRASONIC WAVE TRANSDUCERS**  
Ultrasonics and Optics Would Control Shot Size NPO-15608 B83-10107 08  
Transducer Joint for Kidney-Stone Ultrasonics GSC-12652 B83-10166 05

**ULTRASONIC WELDING**  
Ultrasonic Bonding of Solar-Cell Leads NPO-16140 B83-10702 08

**ULTRASONICS**  
Speculation on Ultrasonic Disintegration of Arterial Deposits MFS-25161 B83-10600 05

**ULTRAVIOLET RADIATION**  
Accelerated Solar-UV Test Chamber NPO-15063 B83-10323 03

**UMBILICAL CONNECTORS**  
Latching Mechanism for Umbilical Connectors MSC-20242 B83-10096 07

**UNDERCARRIAGES**  
Locomotive Truck Dynamics MFS-25872 B83-10390 06

**UNDERWATER TESTS**  
Unmanned Instrument Platform for Undersea Exploration NPO-15878 B83-10526 02

**UNIONS (CONNECTORS)**  
Reusable High-Pressure Connector MSC-20339 B83-10097 07

**USER REQUIREMENTS**  
SPIRE Data-Base Management System GSC-12684 B83-10737 09

**V**

**VACUUM PUMPS**  
Cryogenic Vacuum Pump NPO-15517 B83-10198 07

**VACUUM SYSTEMS**  
Better Seals for Vacuum Bags MFS-25875 B83-10216 08

**VACUUM TESTS**  
Leak Test for Pressure-Sealing Zippers KSC-11247 B83-10654 06

**VALUE ENGINEERING**  
Value-Engineering Review for Numerical Control MFS-19664 B83-10480 08

**VALVES**  
Self-Cleaning Tubular-Membrane Module NPO-15245 B83-10100 07  
Flow-Straightener Sleeve for Pump Valve MFS-19781 B83-10385 06  
Double-Poppet Valve MSC-20627 B83-10669 07  
Triple-Seal Valve MSC-20628 B83-10670 07  
Motorized Cryogenic Valve ARC-11452 B83-10687 07

**VANADIUM COMPOUNDS**  
Charring, Nonmelting Epoxy Foams MFS-25911 B83-10571 04

**VAPOR DEPOSITION**  
Silicon Nitride Antireflection Coatings for Photovoltaic Cells ARC-11447 B83-10332 04

**VAPOR TRAPS**

Packed Alumina Absorbs Hypergolic Vapors  
KSC-11278 B83-10569 04

**VAPORIZING**

Attitude Control by Localized Outgassing  
NPO-15575 B83-10113 08

**VAX-11/780 COMPUTER**

Security Package for the VAX  
MSC-20423 B83-10246 09

**VELOCITY DISTRIBUTION**

Advances in Multivalued-Velocity Theory of Turbulence  
NPO-16006 B83-10622 06

**VELOCITY MEASUREMENT**

Measuring Ultrasonic Shear-Wave Velocity  
MFS-19680 B83-10058 06  
Improved Laser Velocimeter  
MFS-25465 B83-10312 03

**VENTING**

Fluid/Vapor Separator for Variable Flow Rates  
ARC-11401 B83-10299 03

**VHSIC (CIRCUITS)**

VLSI Unit for Two-Dimensional Convolutions  
NPO-15224 B83-10136 02

**VIBRATION**

Characterizing Shear Properties of Membranes  
MFS-25745 B83-10057 06  
Time-Domain Modal Vibration Identification  
LAR-12924 B83-10072 06  
Measuring Tension in Transistor Suspensions  
NPO-15677 B83-10128 01  
Vibration-Isolation Bench for Testing in Vacuum  
GSC-12753 B83-10171 06  
Estimating Design Loads in Coupled Vibrating Structures  
NPO-14872 B83-10182 06  
Improvements in Vibration-Analysis Technique  
MFS-25919 B83-10621 06  
Free-Vibration Analysis of Structures  
NPO-15797 B83-10625 06

**VIBRATION DAMPING**

Low-Vibration Oscillating Compressor  
GSC-12799 B83-10658 07

**VIBRATION ISOLATORS**

Vibration-Isolation Bench for Testing in Vacuum  
GSC-12753 B83-10171 06  
Heat-Pipe Thermal Switch  
GSC-12644 B83-10384 06  
Retrofitting Vibration Dampers  
MFS-19790 B83-10685 07

**VIBRATION MODE**

Analyzing Vibrations in a Long Mast  
MFS-25746 B83-10641 06

**VIBRATORY LOADS**

Suppressing Transient Side Loads in Supersonic Nozzles  
MFS-19769 B83-10379 06

**VIDEO EQUIPMENT**

Status Panel For Video Cassette Recorders  
KSC-11254 B83-10532 02

**VIEWING**

Monitoring Acoustically Levitated Samples  
NPO-15193 B83-10727 08

**VISIBILITY**

Viewer Makes Radioactivity 'Visible'  
GSC-12640 B83-10027 03

**VISUAL CONTROL**

Controlling TV-Camera f-Stop Remotely  
KSC-11269 B83-10550 03

**VISUAL PERCEPTION**

Tracking Visible Targets Automatically  
NPO-15226 B83-10642 06

**VOICE COMMUNICATION**

Two-Wire to Four-Wire Audio Converter  
KSC-11256 B83-10003 01

**VOIDS**

Dielectric Scanning Locates Voids in Glass Foam  
NPO-15728 B83-10176 06

**VOLT-AMPERE CHARACTERISTICS**

Fast Electronic Solar Cell, Tester  
NPO-15676 B83-10011 02  
Portable Data Logger for Photovoltaic Panels  
NPO-15158 B83-10139 02

**VOLTAGE CONVERTERS (DC TO DC)**

SCM Handbooks for dc-to-dc Converters  
LEW-13886 B83-10258 01

**VOLUMETRIC ANALYSIS**

Automated Mercury Dilatometer  
NPO-14884 B83-10604 06

**VORTEX AVOIDANCE**

Antivortex Inlet Ribs for Fluid-Seals  
MFS-19793 B83-10426 07

**VORTICES**

Vortex Lift Augmentation by Suction  
LAR-12969 B83-10071 06  
Calculating the Vortex Lift Effect of Cambered Wings  
LAR-12985 B83-10082 06  
Multivalued-Velocity-Field Model of Turbulence  
NPO-15748 B83-10183 06

**W****WAFERS**

Fracture Strength of Silicon Solar Cells  
NPO-15187 B83-10181 06

**WALKING**

Lightweight, Economical Device Alleviates Drop Foot  
LAR-12259 B83-10165 05

**WALKING MACHINES**

Adjustable Walker for the Handicapped  
LAR-12990 B83-10369 05

**WARNING SYSTEMS**

Remotely-Operated Traffic Control Light  
ARC-11406 B83-10512 01

**WASHERS (SPACERS)**

Belleville Spring/Seal  
MFS-19596 B83-10653 06

**WASHING**

Pressure-Driven Waterflow Cleaning Device  
MFS-19638 B83-10679 07

**WASTE DISPOSAL**

Destroying Toxic Wastes  
NPO-15655 B83-10582 04

**WASTE TREATMENT**

Flowthrough Bacteria-Detection System  
LAR-12871 B83-10164 05

**WASTE UTILIZATION**

Drying Milk With Boiler Exhaust  
NPO-15923 B83-10297 03

**WASTES**

Generating SiF<sub>4</sub> From H<sub>2</sub>SiF<sub>6</sub>  
NPO-15721 B83-10155 04

**WATER FLOW**

Pressure-Driven Waterflow Cleaning Device  
MFS-19638 B83-10679 07

**WATER QUALITY**

Automated Coliform Analysis  
ARC-11322 B83-10368 05

**WATER TREATMENT**

Flowthrough Bacteria-Detection System  
LAR-12871 B83-10164 05

**WATER VAPOR**

Trace-Level Solid-Polymer Electrolyte Hygrometer  
NPO-15722 B83-10645 06

**WATERPROOFING**

Rewaterproofing Silica Tiles  
MSC-20340 B83-10111 08  
Waterproof Raised Floor Makes Utility Lines Accessible  
ARC-11363 B83-10605 06

**WATTMETERS**

Measuring Power Flow in Electric Vehicles  
NPO-15514 B83-10138 02

**WAVE PROPAGATION**

Acoustic Design Improves Composite Impact Resistance  
LAR-12887 B83-10375 06

**WAVEGUIDE ANTENNAS**

Estimating Waveguide Feed Directivity and Spacing  
NPO-15603 B83-10144 03  
Fabricating Slotted-Waveguide Arrays From Sheet Metal  
NPO-15664 B83-10214 08

**WAVEGUIDES**

Fabricating Slotted-Waveguide Arrays From Sheet Metal  
NPO-15664 B83-10214 08  
Polymer Bonding of Optical Fibers  
NPO-15464 B83-10224 08  
Cooling Waveguide Flanges in Microwave Transmitters  
NPO-15401 B83-10264 01

**WEAR**

Bearing Wear in Large Thermal Gradients  
MFS-25879 B83-10428 07

**WEAR TESTS**

Ball-and-Socket-Bearing Wear Test  
MFS-19737 B83-10427 07

**WEATHER DATA RECORDERS**

Lightning-Transient Recorder  
NPO-15895 B83-10272 02

**WEATHER FORECASTING**

Frost Forecasting for Fruitgrowers  
KSC-11241 B83-10243 09

**WEATHERPROOFING**

Preventing Moisture Damage To Solar Panels  
NPO-15481 B83-10477 08

**WEBS (SUPPORTS)**

Proposed Technique of Crystal-Ribbon Growth  
NPO-15629 B83-10474 08

**WEIGHT MEASUREMENT**

Silicon-Film Growth by Continuous  
Edge-Supported Melt Skimming  
NPO-15532 B83-10731 08

**WEIGHT MEASUREMENT**

Portable Pallet-Weighing Apparatus  
GSC-12789 B83-10066 06

**WEIGHT REDUCTION**

Minimizing Weight of Structural  
Designs  
LAR-13107 B83-10624 06

**WEIGHTLESSNESS SIMULATION**

Test Frame Simulates Zero Gravity  
MFS-25518 B83-10637 06

**WELD STRENGTH**

Microfissuring in Nickel-Based-Alloy  
Welds  
MFS-25815 B83-10340 04

**WELD TESTS**

Checking Weld Composition  
MFS-19628 B83-10481 08

**WELDED JOINTS**

Checking Surface Contours  
MSC-20318 B83-10052 06  
Welding Tubes In Place  
MFS-25714 B83-10723 08

**WELDING**

Coil Welding Aid  
MSC-20470 B83-10088 07  
Electronic Force Gage for Welders  
MFS-25798 B83-10172 06  
Absorbable-Susceptor Welding of  
Ceramics  
NPO-15640 B83-10217 08  
Repairing Defective Welds  
MFS-19618 B83-10484 08  
Controlling the Focus in  
Electron-Beam Welders  
MFS-19814 B83-10664 07  
Automatic Guidance System for  
Welding Torches  
MFS-25807 B83-10690 08  
Ribbon Reduces Spiking in  
Electron-Beam Welding  
MFS-19701 B83-10698 08  
Automated Variable-Polarity  
Plasma-Arc Welding  
MFS-27042 B83-10722 08  
Microfissuring in Alloys During  
Welding  
MFS-25604 B83-10725 08

**WELDING MACHINES**

Electronic Force Gage for Welders  
MFS-25798 B83-10172 06  
Welding Tubes In Place  
MFS-25714 B83-10723 08

**WHISKERS (CRYSTALS)**

Electrolytic Sharpening of  
Diode-Contact Whiskers  
NPO-15789 B83-10222 08

**WIND EFFECTS**

Simulating Atmospheric Turbulence  
MFS-25850 B83-10377 06

**WIND TUNNEL MODELS**

Two-Degree-of-Freedom Mount  
System for Flutter Models  
LAR-12950 B83-10062 06

**WIND TUNNELS**

Measuring Surface-Shear Stress in a  
Wind Tunnel  
ARC-11384 B83-10180 06

**WIND TURBINES**

Wind Turbine With Concentric Ducts  
KSC-11191 B83-10086 07  
Compressible Flow About Wind  
Turbine Blades  
LEW-13740 B83-10103 07

**WINDOWS (APERTURES)**

Monitoring Acoustically Levitated  
Samples  
NPO-15193 B83-10727 08

**WINGS**

Vortex Lift Augmentation by Suction  
LAR-12969 B83-10071 06  
Minimum Induced Drag of Nonplanar  
Wings  
LAR-12925 B83-10078 06  
Fast Generation of  
Boundary-Conforming O-Type Grids

Recovering Zinc From Discarded  
Tires  
NPO-16046 B83-10568 04

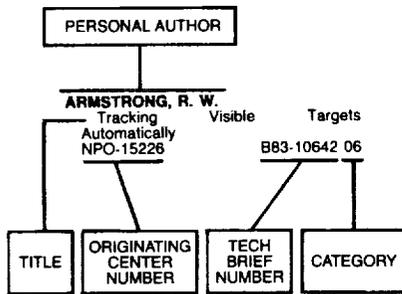

**ZIPPER**

Leak Test for Pressure-Sealing  
Zippers  
KSC-11247 B83-10654 06

**ZONE MELTING**

Toroidal Ellipsoid Float-Zone Heater  
MFS-25771 B83-10711 08

### Typical Personal Author Index Listing

This index is arranged alphabetically by author. The Tech Brief title is listed followed by the originating Center number, e.g., NPO-11381. The Tech Brief number, e.g., B83-10642, is followed by a two-digit number, e.g., 06, which designates the subject category.

## A

- AAEN, R.**  
Solar Heating and Cooling

Evaluation of Structural Cellular  
Glass

NPO-15680 B83-10339 04

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes the need for transparency and accountability in financial reporting.

2. The second part of the document outlines the various methods and techniques used to collect and analyze data. It includes a detailed description of the experimental procedures and the statistical tools employed.

3. The third part of the document presents the results of the study, including a comparison of the different methods and a discussion of the implications of the findings.

4. The final part of the document provides a conclusion and a list of references. It also includes a section on the limitations of the study and suggestions for future research.

# TECH BRIEF NUMBER INDEX

## Typical Tech Brief Number Index Listing

The left hand column identifies the Tech Brief number, e.g., B83-10001, followed by a two-digit number, e.g., 01, which identifies the subject category containing the entire citation. Following the subject category number is the originating Center number.
